## PREFACE.

IN arranging the Ethnological collections in the Bishop Museum the difficulty presented itself at the outset of a very extensive synonymy of the islands comprised in the region of the Pacific from which these collections are drawn. The orthography was largely undetermined, native names of islands had generally given place to the names of saints or of the vessels which carried their supposed discoverers, and as determinations of longitude are, even at the present day, very uncertain in this ocean, islands were discovered, lost and rediscovered,—as the Solomon Islands were lost for two centuries—and the rediscoverer renamed the bit of land or rock that he found seemingly adrift in the mighty waste of waters.

To show the true relation of the various groups and solitary islands in the Pacific the Director constructed with great care upon the wall of the Polynesian Hall of the Museum a chart extending from  $130^{\circ}$  East to  $110^{\circ}$  West longitude, and from the Tropic of Cancer to  $45^{\circ}$  South in latitude, occupying a wall space eleven feet by twenty. The names given to the islands there represented were in all cases the native names where such were known to exist; where there were no aboriginal inhabitants (as at Wake Island), or where the aborigines had disappeared (as at Pitcairn Island), the name imposed by the first discoverer was preferred. This led to some difficulty as names familiar to some were replaced by less familiar terms: Penrhyn became again the original Tongareva; one Pescadores became Bikini, another Rongelab; Sandwich Island returned to its aboriginal Vaté. As it was impracticable to cover the chart with synonyms the best way seemed to be to print a list of all the names generally applied in charts or voyages in the form of an index, that not only the student might understand the labels attached to the ethnological specimens and groups, but the general visitor to the Museum be able to find an island appearing on the chart under an unfamiliar name.

This course appeared convenient, if not necessary, for those who had the arrangement of the Museum in charge that there should be no confusion or variation in the nomenclature of localities; that consistency, at least, if not absolute accuracy might prevail.

In the present state of our knowledge of the geography of the Pacific Ocean, it is not possible to place accurately the position of the known islands of this ocean, still less is it possible to go beyond conjecture in the identification of many of the discoveries of the earlier voyagers. It has not been possible to obtain the true native name in all cases, and indeed in some of the larger islands, as New Guinea, there seems to have been no collective name for the numerous districts comprising the island, and doubtless in a few cases the name of a portion has been applied to the whole. Especially is this the case in the "ring-atolls" where the name of a prominent islet sometimes stands for the whole group. As to the orthography, even the missionaries who have acquired more or less knowledge of the vernacular, do not always agree as in the case of Jaluit which some spell Jaluij. But if one were to wait for perfect knowledge before coming to the public there would be little enough printed, and it has seemed best to print the following pages with all their imperfections, trusting that the better

knowledge of others to whose notice they may come will assist in correcting the existing mistakes. Those in charge of this Museum will welcome any addition to their information in these matters.

Although the modern war vessel is sadly unfit for the purposes of scientific exploration, it is hoped that England, America, Germany or France may ere long find national ships to survey the Pacific anew and accurately. The life that Magellan, Mendaña, Cook, Vancouver, and even Wilkes found has almost disappeared; a new and far less interesting order has replaced it. Even the outlines of the coral islets have changed, and in the volcanic region the very bottom of the bays in which the great explorers anchored has sunk or risen as the submarine forces have acted. Europe and America have divided the islands among them, let them now, like wise proprietors, carefully survey and study their new possessions. Here in the midst of the Pacific Ocean we would store for common use all that we may gather from the vast extent of the "Great Ocean".

## THE ISLANDS OF THE PACIFIC OCEAN.

---

FOR the purpose of this Index the Pacific Ocean will no longer extend from Bering's Strait to the Antarctic circle and from Kamchatka, Japan, China, the Philippines, Moluccas and Australia to the American coast: the Aleutian and continental islands, the Galapagos and Juan Fernandez on the East with Kurile, Philippine and the archipelago north-west of Australia belong ethnologically if not geographically to another region, and hence the bounds of the Pacific which shall include all Oceanica (except Malaysia) will be on the North the Hawaiian and Bonin Islands, 30° N.; on the East Rapanui or Easter Island, 105° W.; on the South New Zealand and its islets, 55° S.; and on the West New Guinea and the larger portion of Australia, 130° E. Thus defined all minor divisions of this vast expanse of water are eliminated, except the Coral Sea. Shorn of its fringe of seas, gulf and bays it is still an immense area extending through eighty-five degrees of latitude from north to south and through one hundred and twenty-five degrees of longitude from east to west. We may glance at its history both natural and political, beginning with the latter as best known.

Although the Portuguese followed Vasco de Gama by the Cape of Good Hope and far beyond the Moluccas into what is now known as the Pacific Ocean, it was left to their neighbors and only rivals in discovery, the Spaniards, in the person of the brilliant and ill-fated Vasco Nuñez de Balboa, to reach its eastern shores. September 29, 1513, the brave conquistador, after a terrible journey through Darien, saw the new ocean, and as it was the Michaelmas season, in the custom of those days named it Golfo de San Miguel; then marching into its clear and placid waters took possession in the name of His Majesty of Spain. Balboa died soon after (1517), murdered by his father-in-law Pedro Arias d'Avila, and his great discovery profited him little if indeed it was not indirectly the cause of his untimely death.

Another grand man, in many ways not unlike Balboa, Fernão de Magalhães, possessed with the conviction that the continent of America did not, as it seemed to all others, absolutely bar the path to far Cathay, but that there must be a way around if only one could sail far enough to the southward, pushed on with the spirit of Columbus against storms and storm-like men, sailed through the strait which still bears his name, and on November 28, 1520, passed into the wide ocean which in contrast to the rough Atlantic he named *Mer Pacifico*. We know now that storms on this ocean are as formidable as on the Atlantic, but his experience was all the other way and for

three months and twenty days he sailed with favoring winds north, then north-west, and finally west, suffering bitterly from scurvy and privation until on March 6, 1521, the green shores of the islands which his sailors called from the misconduct of the natives "Ladrones" were seen, but not until ten days later were the sufferings of the company relieved when they came to the important group since called the Philippines. Then persuaded to aid the petty chief of Zebu in his wars Magalhães fell miserably on the island Maçtan, and his comrades had not even the melancholly privilege of burying his remains. The survivors completed the first circumnavigation of the globe but strangely missed all the islands of the central Pacific and added only the islands of the Marianas to the map of Balboa's ocean.

Next from the west came the Portuguese Jorge Menezes and discovered New Guinea, which only a few months later was rediscovered by the Spaniard Alvaro de Saavedra sent by Hernan Cortez from Mexico to the Moluccas. Saavedra on his return saw islands of the Caroline Group, and in 1542 Ruiz Lopez de Villalobos on a voyage from Mexico to colonize the Philippines saw others of the same group but neither could sufficiently determine the position for identification.

In 1567 Alvaro Mendaña de Neyra discovered the important group which he called *Islas de Salomon* and in 1594 Philip II. gave him a commission as Adelantado. In April, 1595, Mendaña sailed from Callao "*para ir a pacifica y poblar las islas occidentales del mar del sur.*" Although he never again saw the Solomon Islands, he discovered and named the Marquesas Group and came at last to the island of Nitendi or Santa Cruz where he attempted to colonize but died and his survivors quarrelled with the natives until his widow sailed with his remains and what was left of the colony to Manila, where she married the Governor. Not long after the ship of the expedition which carried the corpse of the Adelantado, and which had been driven from the squadron by a storm, followed her to the island of Luzon where it ran ashore, sails all set and rotten, and all hands dead on board, another tragical ending for a discoverer in the Pacific! One of the ships of this expedition disappeared mysteriously in a slight squall one evening and it was supposed that tired of the infelicities of the ill-fated colony her company had deserted and taken the northern route back to Callao. If they tried this long and perilous way, in a ship insufficiently provisioned, they never reached their goal, and as the Hawaiian Group was not far from their probable track, it may have been from this ship that the survivors were thrown on the shore of Hawaii, as told in the native legends.

Francis Drake had in the meantime crossed the Pacific in the "*Golden Hind*," the first English warship to circumnavigate the globe. He left England December 13, 1577, entering the Pacific in September of the following year, and early in November, 1580, arrived at Plymouth; but his mission was not to discover new lands but rather to vex the Spaniard.

In 1606 Luis Vaez de Torres, a companion of Quiros, coasted the southeastern part of New Guinea and discovered the strait separating that island from Australia which still bears his name. At the same time the more distinguished Pedro Fernandez de Quiros, who had been pilot with Mendaña, discovered the New Hebrides and other islands, among them Sagittaria which Espinosa and others identify with Tahiti. Abel Janszen Tasman sailed by order of the Governor Van Diemen from Batavia in August, 1642, to explore Australia, and in November discovered Tasmania (which he named Van Diemen's Land), in December New Zealand, and in 1643 a part of the Tongan Group. Other Dutch vessels from Batavia made various discoveries along the coast of Australia, and in 1699 the English freebooter Captain William Dampier explored the coast of Australia and New Guinea, leaving memorials of his voyaging in Dampier Archipelago, Dampier Island and Dampier Strait. Jacob Lemaire and Jan Schouten had in 1615 discovered the Strait of Lemaire and Cape Horn (which Schouten named in honor of his native town, Horn). March 1, 1616, they sighted Juan Fernandez and then crossed the ocean to the northern coast of New Guinea.

The eighteenth century was destined to reveal more accurately the secrets of the "Great Ocean". In 1721 Jacob Roggewein was sent across the Pacific by the Dutch East India Company and he discovered Rapanui or Easter Island. Lord Anson's voyage (1740-1744) was of a war-like nature, but in capturing the Spanish galleon he captured also the Spanish chart on which were "Las Mesas", a group of islands which Cook searched for on his way north from Tahiti and found in the designated latitude the group which he called Sandwich in honor of his patron, a Lord of the Admiralty. Anson's voyage had a far greater effect than Drake's in turning the attention of the English to the Pacific, and in 1764 Commodore Byron, the grandfather of the poet, crossed it on his voyage around the world, and on his return in 1766 a more formal *exploring* expedition was fitted out with Captain Wallis in the *Dolphin* and Captain Philip Carteret in the *Swallow*. Wallis first determined longitudes in this ocean by lunar distances and thus corrected the charts, which hitherto had but little improved on the early Spanish in that measurement. He rediscovered Tahiti June 19, 1767, and discovered Sir Charles Saunders Island (Tapamau) in the same group. His colleague Carteret discovered Pitcairn's Island July 2, 1767, and a number of islands of the Low Archipelago. About the same time the French sent Louis Antone de Bougainville on his memorable voyage around the world. He passed the Strait of Magellan and touched at Tahiti eight months after Wallis. He was a distinguished navigator and mathematician, a Fellow of the Royal Society, and had the honor of first carrying the French flag around the world, but his surveys and charts were sadly inaccurate.

All these advance scouts had prepared the way for a series of voyages unsurpassed in the history of maritime discovery: voyages whose record translated into all

the principal languages of Europe were the most popular reading of the period, and to this day they are a mine of information concerning the people then dwelling in the islands of the great Pacific Ocean. The transit of Venus excited the greatest interest among the astronomers of that day and the Royal Society prevailed upon the Government to send an expedition to the "South Sea" to make suitable observations. Tahiti was selected as the most desirable place, and a young lieutenant, James Cook, who had distinguished himself at Quebec and in the service generally, was put in command of the *Endeavor* and sailed for the little known island. After exploring the group, which he named "Society Islands" in honor of the Royal Society, he surveyed New Zealand and the east coast of Australia with an accuracy which left little for his successors, then sailed for home through Torres Strait. Brief must be the account in this place of Cook's voyages, but it may be stated that on the second, when the main object was to explore the antarctic region, he sailed in the *Resolution* (460 tons) and discovered New Caledonia and several islands of the New Hebrides. This time he sailed as Captain, and on his return he was appointed Captain of Greenwich hospital with the rank of post-captain. This honorable sinecure he left to command the *Resolution* and *Discovery* on a voyage to discover the "Northwest Passage". Wintering in the Friendly Islands, he discovered the Hervey Group, often called Cook's Islands, and on his way north found the Sandwich Islands, which his countrymen have hardly yet learned to call Hawaiian. It was on his return from an unsuccessful search for the passage between the Pacific and Atlantic that he died at the hands of the Hawaiians at Kealakekua Bay.

Cook's example stimulated the French to renewed efforts, and the accomplished Jean François Galaup de la Pérouse was sent in 1785 to search for the delusive passage. He was in command of the *Boussole* and, with his assistant De Langle on the *Astrolabe*, sailed to the coast of Alaska. The same icy wall blocked their way that had turned Cook back, but on the north-east coast of Asia they made some discoveries. In December, 1788, De Langle, Lamonon the naturalist, and ten of the crew of the *Astrolabe* were massacred on Tutuila of the Samoan Group (named Navigator Islands by Bougainville), but the rest of the expedition reached Botany Bay in January, 1788, and was not heard from after leaving that port.

In 1791 D'Entrecasteaux was sent in search of La Pérouse. He surveyed the Louisiade Archipelago and made some interesting discoveries in that region but died on board July 20, 1793, still ignorant of the fate of his countrymen. Only in 1828 Peter Dillon found the remains of the wrecked vessels on the island of Vanikoro in the New Hebrides.

Lieutenant Bligh, in the *Bounty*, was at Tahiti in 1788, and six months after the famous mutiny broke out and the commander was set adrift in an open boat. In this he made his adventurous voyage to Timor discovering the Banks Islands on the

way. Captain Edwards, who was sent in the *Pandora* to search for the *Bounty*, discovered Anuda and Fataka Islands, but his ship was wrecked on a reef (Pandora Reef) in Torres Strait.

In 1796-97 Captain Wilson, during the missionary voyage in the *Duff*, discovered the Gambier Islands and rediscovered the Duff Group. In the latter year there was great activity in the Australian region when George Bass discovered Bass' Strait, and with Matthew Flinders surveyed the east coast of Tasmania. Captain Flinders continued this work in the *Investigator* but was captured by the French in 1804 and kept a prisoner for six years.

George Vancouver, another great Englishman who had been with Cook in his last two voyages, explored the Pacific (1792-1795), especially on the north-west coast of America, and had much to do with the conquest of the Hawaiian Group by Kamehameha. Only his untimely death soon after his return to England in 1795 prevented his return to the Pacific for farther exploration.

The Russians now took up the task and in 1804 Admiral Krusenstern sailed around the world. From 1815 to 1818 Otto von Kotzebue followed in the *Rurick* discovering a number of low islands in the Paumotus and farther north; while in 1828 Lütke, in the *Seniavine*, surveyed the Carolines. To this nation also belongs the voyage of Bellingshausen in 1819-21.

England continued the work with Captain William Beechey in the *Blossom*, 1825-28; Sir Edward Belcher in the *Sulphur*, 1836-42; Captain Fitzroy (with whom was Charles Darwin) from 1832 to 1836; and Sir James Ross with the *Erebus* and *Terror*, 1841-43; all of the voyages adding largely to the knowledge of the Pacific.

In 1838 the United States Government entrusted to Lieutenant (afterwards Admiral) Charles Wilkes the command of its first and greatest exploring expedition, and under his direction surveys were made of the Hawaiian, Fiji, Samoan, Paumotu and other groups, while the results to Natural Science were even greater than to geography.

The French had not been idle, and mention should be made of the following government voyages in addition to those already noticed. Louis de Freycinet with the *Uranie* and *Physicienne*, 1817-20; Duperrey on the *Coquille*, 1822-25; Dumont d'Urville on the *Astrolabe*, 1826-29; and du Petit Thouars on the *Venus*, 1836-39, made some geographical discoveries and corrected many mistakes of their predecessors, but perhaps their harvest was rather in the realm of Natural History, and indeed with these voyages the discovery of new lands ceased and the efforts of succeeding explorers were directed mainly to investigation of natural phenomena, as in the Austrian voyage of the *Novara*, 1857-59, of which the naturalist Dr. Karl von Scherzer was historian; and the Italian voyage of the *Magenta*, 1865-68, whose story was so well told by another naturalist, Dr. Enrico Hillyer Giglioli. The greatest of these scientific voyages was that of the English in the *Challenger*, 1872-76. The

depths of the ocean were studied in this long voyage and at the same time (1873-76) the United States sent the *Tuscarora* in command of Belknap, Erben and Miller, to take soundings for a submarine cable across the Pacific. The British ship *Gazelle* took many soundings in the South Pacific, and the British ship *Penguin* under Commander Balfour has the distinction of reaching the greatest depth in this ocean in 1895, when in latitude  $30^{\circ} 28' S.$  and longitude  $176^{\circ} 39' W.$  5107 fathoms were measured. The United States surveying vessel *Albatross* has made no slight contribution to the knowledge of this ocean and its inhabitants of the lower forms of animal life. Before we leave the story of the discoveries in this ocean tribute should be paid to the hardy American whalers who discovered many islands and have left the name of their ship, sometimes indeed their whole ship on the islands they discovered.

The activity at the present time in the examination of the oceanic depths due to the various schemes for laying telegraphic cables will no doubt result in considerable increase of our knowledge of the bottom, and it seems probable that in the next few years the map will be something more than a mere outline.

The story of the great discoverers is a tragic one, as nearly all met a violent death, from Balboa to Dumont D'Urville, and every islet has its romance although often untold by mortal tongue: Defoe did not tell of all the Robinson Crusoes, nor Melville all about Typee. Islands have been found and lost again, men and ships have been lost and never found again; and from the time when the early whalers were said to have hung their consciences upon Cape Horn as they entered the Pacific Ocean, to the later days when the labor pirates disposed of theirs in some equally convenient way, there has been great crime and great cruelty through the islands of this fair ocean. Those usually considered of a higher race who have voyaged through the Pacific have not always been missionaries, nor have they always been true to the traditions of their race. How often have they expressed the utmost horror of the poor untaught cannibals while themselves devouring the souls and lives of those they pretended to detest!

Glancing but briefly at the results of all these discoveries in the province of Natural History we find certain facts that will be a foundation for many theories as to the origin of both animal and vegetable life on the land found here and there amid the waste of waters. First of the great earth cup that contains this greatest of oceans, an expanse of water extending 10,000 miles from Quito to the Moluccas and covering nearly 70,000,000 square miles of the earth's surface.

**Depth of the Ocean.**—Modern deep-sea soundings have established the fact that the average depth of the Pacific Ocean is greater than that of the Atlantic, and that in it are found the greatest depths yet reached in any ocean. The average height of the continents bounding this ocean is 800 feet, while the average depth of the Pacific is 2500 fathoms, or about three miles below the average continental level.

If an imaginary line be drawn from Honolulu to Tahiti the portion of the Pacific to the east of this line is of comparatively even and moderate depth and there are few islands. West of this line island groups are abundant and the bottom presents great irregularities. Abyssal holes abound and submarine peaks arise in some cases many thousand feet from a depressed plateau. Shallow tracts are said to extend from Patagonia to Japan, and parallel to this occur the wrinkle-like elevations of the bottom on which occur the many groups of islands. The seas that fringe the western boundary of this ocean are separated from the main basin by plateaus of considerable height, although still submarine, and this feature has furnished rather insecure foundation (in our present knowledge) for many theories of animal and vegetable distribution. A matter of considerable interest is the occurrence of deep holes such as that the *Challenger* found between the Caroline and Marianas Groups where the soundings indicated 4475 fathoms, or about five miles and a quarter. Another occurs east of Tonga; one has just been found near Midway Island, and the "deep" along the eastern coast of Japan from 20° N. to 50° N. seems like a long narrow crack in the sea bottom. Other deeps have been charted and the number which bear distinctive names is already considerable, but they can best be studied in the *Challenger* reports and on the more recent hydrographic charts. The shoals seem even more important as they may be inchoate islands.

**Currents of the Pacific.**—It is certainly known that the vast body of water of this ocean is in a constant state of circulation, and in a way partly independent of the prevailing winds, although, as we shall see below, the winds vary with the seasons as do the main channels of circulation. In this place it is sufficient to mention the great streams or arteries which flow in tolerably determined bounds and in constant direction while we must pass by the less definite currents which are modified by lands, by shoals, or by the winds,—currents which in meeting do not mingle, but the denser or cooler current sinks below and passes beneath its lighter antagonist.

Bering Strait is but a little gateway and admits no important current from the Arctic seas, but on the south from the Antarctic regions a strong current flows north to New Zealand where it is turned eastward to the coast of Patagonia, a branch continuing east past Cape Horn, while the main stream, called in honor of its discoverer Humboldt, passes up the coast of South America until the isthmus of Panama deflects it to the west. As it meets the coast of Formosa it also encounters and travels with a stream analogous to the Gulf Stream of the Atlantic, the Kuro siwa of the Japanese, so called from its dark blue color. Merged with this it flows northeast then east until the Alaskan shores divert it to the south and west. The Kuro siwa has an average maximum temperature of 86° F., or about 12° greater than that of the waters of the ocean through which it passes. Narrow near Formosa, it gradually broadens until north of the Bonin Group it is 500 miles wide. Between the two great equatorial currents flowing westward on either side of the equator is a narrow counter-equatorial

## INDEX TO THE PACIFIC ISLANDS.

current flowing to the east. Still farther observations on the currents are needed, for their influence, although of less interest to navigators in these days of steam-propelled vessels has most important bearing on the peopling of the different groups.

The cases of Japanese junks recorded as drifting to the Hawaiian Islands and to the north-west coast of America have often been referred to, and it is well known that the inhabitants of the Alaskan Islands obtain much of their fuel as driftwood from the Asiatic coast: it should also be noted that many of the largest and most famous double canoes of the Hawaiians were hewn from logs of Oregon pine brought to the shores of Niihau and Kauai by the waves. I myself saw dozens of such logs in 1864, some of great size, some bored by *Teredo*, others covered with barnacles, along the shores of Niihau. To the same shores are brought lumps of fine pumice which the ancient Hawaiians freely used to polish their canoes and wooden dishes.

**Winds of the Pacific.**—In some considerable measure accelerators if not originators of oceanic currents are the prevailing winds. The two agencies combined have had a large part in the distribution of animal and vegetable life through this ocean. In the eastern half of the Pacific, which is comparatively free from land, the north-east trade winds blow with marked regularity as far south as the equatorial belt of calms which encircles the globe nearly parallel with the equator, and in the southern hemisphere the south-east trade winds blow as regularly to the same belt where they rise and return in the upper regions to the polar seas whence they came. Such is in general the plan of air currents in the open ocean of the eastern half, but the north and south limit of each of these trade winds varies with the season, and wherever islands occur a variation results not always easy to explain: even the very low coral islands are quite sufficient to change the force and direction of the trade winds, substituting a land and sea breeze system. The following table, taken from Kerhallet, will show clearly the variation of the "Trades":

A TABLE OF THE LIMITS OF THE "TRADES" AS AFFECTED BY CHANGE OF SEASONS.

The division of the trades on the belt of the "Doldrums" is always to the north of the equator, perhaps owing to the unequal distribution of land and water in the two hemispheres, for representing land by 100 the proportion of water in the north hemi-

sphere is 150 while in the south it is 628. Over the doldrums, at a great height, hangs a belt of cloud formed by the opposing currents of different temperatures.

Formerly it was believed that the trade winds extended over the entire breadth of the Pacific, but although additional data are needed, enough are at hand to show that this is true only of the region extending between the Galapagos and the Paumotus, or from  $90^{\circ}$  to  $150^{\circ}$  west longitude, less than half its extent so far as the SE. trade winds are concerned: the NE. trades blow as far west as the Mariannes. We fortunately have tables of wind observation from two points in the western course of the northern belt of wind. At Jaluit in the Marshall Group ( $169^{\circ}$  E.) Dr. Steinbach has made the observations given in the following table:

TABLE OF THE DIRECTION OF THE WIND AT JALUIT, MARSHALL ISLANDS, FOR THE THREE YEARS 1892-1894 AS OBSERVED BY DR. STEINBACH.

At Ponapé in the Caroline Group ( $158^{\circ}$  E.) Mrs. L. H. Gulick, of the American Mission, kept a meteorological record for several years. From this the winds for the year 1854 are shown as follows:

Among the islands between the Australian coast and the Paumotu Group the SE. trade winds are only felt during the winter or between March and October. In the belt of calms storms and abundant rains are not uncommon. South of the Tropic of Capricorn are found the *anti-trades* blowing from the NW. or W. with considerable regularity, and north of the Tropic of Cancer blows the SW. anti-trade. This SW. wind coming over the vast area of northern Asia is a cold dry wind, but when it crosses the warm stream of the Japanese current it condenses the tropical vapors brought by that stream from the south and thus causes almost perpetual fog: as it strikes the Alaskan shores it is a warmer rain-bearing wind. In the western Pacific *monsoons* take the place of the trade winds, blowing half of the year in one direction but reversing the direction during the other half. The change of monsoons is much dreaded as prolific of storms.

Hurricanes seldom occur in the open Pacific, but in the region of Samoa and Fiji and farther to the west are far from uncommon. The whole of the north-west portion between 20° and 45° N. is subject to cyclonic storms called typhoons. A capital review of these storms, both hurricanes and typhoons, is to be found in *Segelhandbuch für den Stillen Ozean* of the German Hydrographic Board, Hamburg, 1897.

**Climate.**—From the great range in elevation from the coral islet over which the storm waves break to the heights of the island of Hawaii where the volcanic peaks closely approach the line of 14,000 feet; from the winds of constant direction in the eastern half to the fickle airs of the Solomon Islands: there is even in the main portion of Oceania which is within the tropics a great variety of climate. In the trade wind regions the moisture brought in the breezes is mainly precipitated on the windward

side of high islands leaving the lee side often dry and desert-like, while where the monsoons prevail both sides get a share of the rain and the vegetation is more luxuriant and uniform. Indeed the rain is often superabundant on some groups of the western Pacific, as the early Spanish navigators found to their disgust, for in those days the seamen had no proper shelter and had to cook their food on the open deck. The dry climate of the Hawaiian Islands where the natives could wear bark cloth had its counterpart in the cool and wet New Zealand where the same Polynesian had to make his garments of the warmer and more durable flax which he ingeniously made water-proof. New Zealand and its dependencies alone extend beyond the tropics, and

in the southern part of that noble group the southern Alps vie in beauty and majesty with the better known Swiss mountains. Perhaps nowhere in the world outside of the Pacific can so great a variety of climate be found. Tables of rainfall, maps of isothermic lines can be given of some parts of the Pacific region, but the record is too imperfect and as yet covers too narrow a territory to make it worth while to reproduce here.

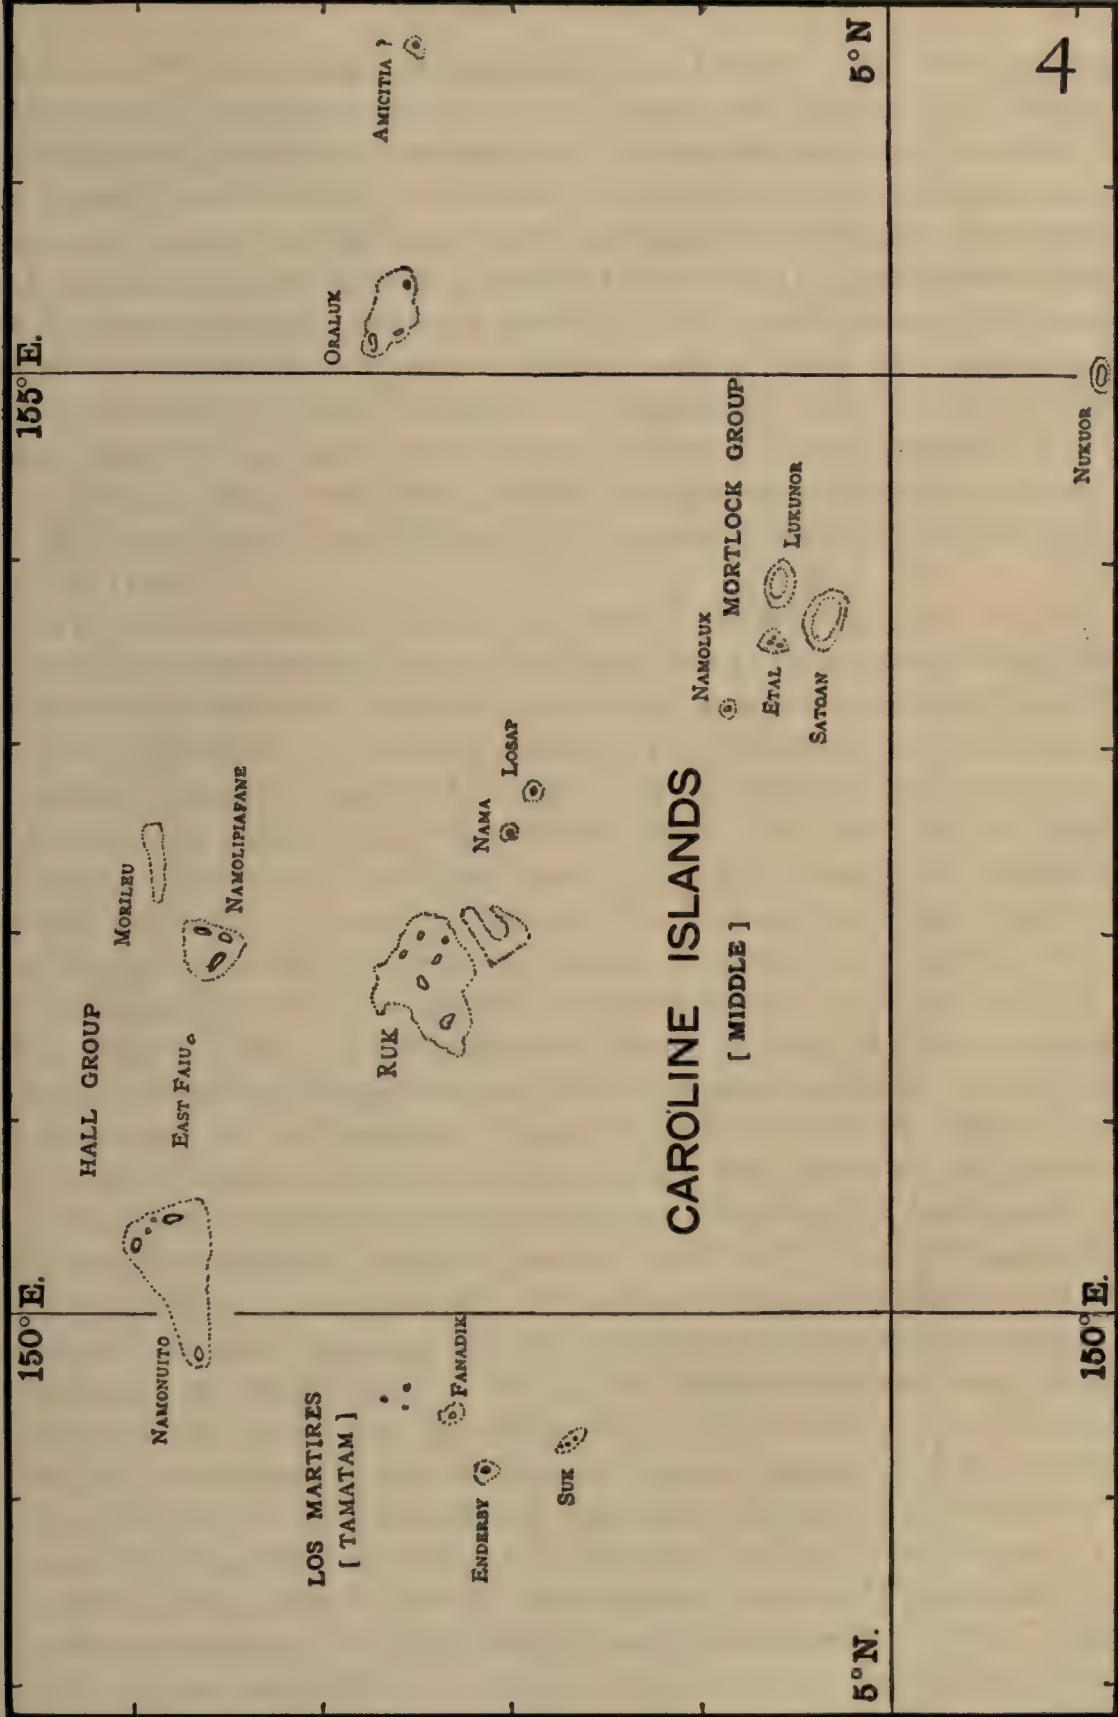

**Island Forms.**—A marked difference exists between islands in our region: some rise high above the ocean presenting conical peaks more or less eroded into radial valleys; the peaks and slopes generally, at least on the windward side, covered with dense vegetation; while the second class consists of a low sand bank not more than a dozen feet above the ocean and only visible to the approaching vessel by the lofty coconut trees. Of the former class are the Hawaiian, Samoan, Society Groups, and most of the western islands, while to the latter class belong the Paumotus, Gilbert and Marshall Groups: the two forms are sometimes combined as at the Fijian Group. So far as known all the high islands of the central Pacific and most of those in the west are volcanic.

**Volcanic Systems.**—All along the shores of the Pacific are active volcanoes. Commencing with the little known volcanoes of the Antarctic region, of which we may hope to learn more in view of the present interest in Antarctic exploration, the Andes continue the line with some of the loftiest in the world near the equator. Central America presents volcanoes of great variety and interest, mostly detached and not in mountain chains. Mexico with her Coseguina and others less active in modern times, while Shasta, Ranier and Baker carry the line northward until it takes to the water in the Alaskan Islands and crosses to the fine ranges of Kamchatka, then through Japan, the Philippines to Java and Sumatra where it leaves this region. With such a wall of fiery sentinels it is not surprising that the enclosed space should bristle with similar volcanic and seismic phenomena. Hawaii on the north-east seems to be a prolongation of the Mexican line which is marked by Colima, Popocatepetl and Orizaba. It is a line of volcanic action extending nearly a thousand miles, although the portion to the north-west has long been extinct. At the extreme southwest is the largest active crater in the world, Kilauea, which has given its name to a remarkable type of *pit crater*. The Marquesas, although volcanic, present no craters and have long been extinct: and this is true of the Society Islands, but their near neighbor the Tongan Group is still active and submarine volcanoes break out, form islands of loose cinders, and soon are converted to shoals by the waves. New Zealand contains several grand volcanoes and its volcanic phenomena in the way of hot springs are noteworthy. The "Terraces" on the North island were the most beautiful in the world until destroyed by the eruption of Tarawera (in June, 1886). In the New Hebrides are several smaller active vents; one of them, on Tanna, has been constantly active, like Stromboli, at least since the time of Cook. The Solomon Islands and the Bismarck Archipelago are fully vol-

eanic, eruptions frequently occurring in some part of that territory. A region of such marked volcanic character might be expected to exhibit the concomitant phenomena of earth movements, both earthquakes and the grander if less obtrusive movements of elevation and depression, and it was the latter change in level that gave Darwin the foundation of his ingenious theory of the formation of

**Coral Islands.**—Most important, both from a geological and a zoological standpoint are the buildings of the coral-forming polyp. Throughout the portion of the Pacific between the dotted lines on the diagram of this ocean (Fig. 2) this minute animal has by the force of numbers greatly increased the area of habitable land, made harbors

perature is 85° F., or two degrees higher than in the Atlantic. The mean temperature for the year is, in the North Pacific 73.5° F.; in the South Pacific, 70° F. Where the temperature of the surface is never below 70° F. during the year, that is within 15°-20° of the equator, the reef corals abound both in species and individuals, as at the Fiji Group, which is one of the most remarkable coral gardens of the ocean. The Hawaiian Islands are near the northern limit of subtorrid warmth and only the hardier forms are found (as *Porites* and *Pocillopora*) and their growth is not so luxuriant: the beautiful *Madrepora* of the southern groups is wholly wanting. This brief reference must suffice to indicate the important factor that temperature makes in the distribution of reefs. Corals will not grow in muddy water, or when the percentage of salt falls below a certain point, hence their absence opposite the discharge of rivers. In depth the living corals (reef-building) do not extend beyond twenty-five fathoms or 150 feet (Dana).

The Hawaiian Islands are well provided with fringing reefs but have no barrier reefs, and these two forms are thus distinguished: the former is a fringe or extension around or on certain coasts of a high island, presenting a tolerably flat surface at low tide, interrupted by wells and channels; the latter is detached from the shore by a channel of greater or less width, and may form a wing encircling the island, or it may extend along a coast as the Great Barrier Reef of the east coast of Australia which extends parallel with that coast some 1250 miles. What is the explanation of these detached reefs? It is not so difficult to understand the growth from a shore as the polyp grows, comes too near the surface, is exposed too long at low tide, dies and its successors have to push seaward. On most fringing reefs the dead far out-numbers the living coral. If coral, probably from a deficiency of light, cannot grow at a depth below twenty-five fathoms, how could a detached mass start from the bottom of an ocean which in the immediate vicinity of most coral islands presents a much greater depth? Charles Darwin explained this in a very simple way and his conclusions, with all their consequences, were accepted as satisfactory for many years. It is well known that changes of level take place in "solid" land. On the Hawaiian island Oahu the ancient coral reef is now from two to three fathoms above the level at which it was formed not many ages ago, and other regions have as evidently subsided. In this subsidence Mr. Darwin finds the key to the formation of barrier reefs. Granted the subsidence this theory capitally explains all the phenomena of reef formation. Agassiz, Dr. Murray and Professor Alexander Agassiz (feeling that the subsidence theory was not proven for all localities) base their explanation of the barrier reef on the growth of the coral on the rim of a volcanic crater at a suitable depth. There is this difficulty that some of the atolls in the Indian Ocean would presuppose a crater thirty miles in diameter, a size which has no parallel on the earth's surface. Interest has lately been excited in this question by the borings on the coral island of Funafuti,

and by the renewed explorations of Alexander Agassiz, but at the present writing the evidence is not conclusive on either side.

Without adopting either theory we may state that coral islands have a fringing reef more or less interrupted, sometimes a barrier reef, while the island in many cases becomes simply a ring of circular or irregular form, and the enclosed space is called a lagoon in the atoll. An opening into this lagoon may convert it into a good boat harbor, or the continuity of the ring and the growth of coral or the wash of sand and debris may fill the lagoon converting it into a simple coral island with a fringing reef. Many islands have simply a depression in the centre marking the former lagoon. Atolls have often many islets inhabited on the ring, while other islets rise from the shallow lagoon.

From the organic nature of the reefs they are constantly changing, and the change is generally a growth: hence channels become shallower and unless kept open by some fresh water stream finally close; lagoons which have served for harbor to vessels of light draft become dry land. Coral rock is easily cut and artificial channels can often be cut to good harbors, and the apparent scarcity of such havens in the central Pacific may be remedied. The growth of coral patches off harbors and in channels is a serious danger to navigation and requires frequent surveys. The rate of growth of coral reefs is not yet satisfactorily determined. Darwin's *Voyage of the Beagle*, and Dana's *Corals and Coral Islands* may be consulted for farther information as to the growth of corals. In regard to the geographical distribution of reefs it may be briefly stated that there are no reefs on the South American coast, and only detached corals in the Panama region. Easter Island is without reefs, so is Pitcairn, although there are some growing corals about the latter, while the neighboring Paumotus consist of eighty coral islands, nearly all with lagoons; the Marquesas have little coral about them; the Society Islands and Fiji abound in reefs. The Samoan and Tongan are well provided with reefs, although in the former group Tutuila has less coral than Upolu. Of the Hawaiian Islands Kauai, Oahu and Molokai have extensive reefs, while Maui and Hawaii have very little except detached corals; Necker and Nihoa have none, but farther toward the west are many reefs. The Gilbert, Marshal and Caroline Islands are almost entirely coral. The Marianas are actively volcanic in the northern portion where there are no reefs, but the southernmost Guam has extensive reefs; so have Yap and the Pelews. The New Hebrides again are actively volcanic and have few reefs, while New Caledonia abounds in them. The Coral Sea and Great Barrier reef continue the line southward. The Louisiade Group and the Admiralty Islands have barrier and fringing reefs, while the north coast of New Guinea which is fringed with volcanic islands has no reefs. Of the Solomon Group only the western portion has extensive fringing reefs. As to the extent of all the reefs in the western Pacific there is great lack of trustworthy information.

**Flora.**—On the shores of nearly all the islands in our region are found a few plants common to all tropical countries, and which are easily dispersed by currents. They belong to the families Malvaceæ, Convolvulaceæ, Solanaceæ and Leguminosæ, and are of little interest. This association of plants is often called the madreporic flora. In the low islands of the Pacific there is little else for the botanist; add the ubiquitous pandanus, coconut and mangrove and the tale is told. In the high islands the interesting and peculiar flora begins at the height of about 1200 feet, and it is this flora that contains all the species peculiar to the islands.

In the many shaded and moist valleys of Polynesia ferns find a congenial home, and from the lightness of their spores are easily distributed; hence the Polynesian flora presents 15% of ferns. Other predominant plants are provided with especially light seeds as in the families Urticaceæ, Rubiaceæ, Lobeliaceæ and Orchidacæ. The last family counts many species in Fiji and the Society Islands as well as in Australia, while on the Hawaiian Group only three small species are found. On the other hand, of the Lobeliaceæ none are found in Fiji, three only in the Society Islands, while on the Hawaiian Islands are found more than fifty species. Most of the Polynesian vegetation is woody; annuals form only 1%, and most of these are strangers confined to the shores.

The question of the origin of the plants on isolated groups is of great interest, but its discussion would carry us far beyond the limits of this introductory chapter. It will be found, however, that the widely disseminated plants are either provided with wings or other suitable appendages for the wind-borne journey, or are attractive food for birds of passage. In the stomachs of pigeons killed in Micronesia have been found the seeds of Fijian plants. The lantana (*L. camara*) was cultivated for years in gardens in the Hawaiian Islands but it showed no tendency to spread until the so-called mina (*Acridotheres tristis*) was introduced, when the berry became its favorite food and the indigestible seed was scattered everywhere. Cosmopolitan species are introduced by winds and currents, hence a study of these will explain many cases. Rare American plants are almost confined to the Hawaiian Group, the nearest to that continent and in the line of the NE. trade winds.

Of the flowering plants the proportion to the whole flora is in south-eastern Polynesia 20%; in Fiji, 40%; and in the Hawaiian Islands, 80%. The affinities of the plants in each group are instructive. About 500 species are common to Asia and tropical Australia. Some 220 species are common to New Zealand and Australia. Of the two species of *Ranunculus* found on the Hawaiian Islands, one resembles *R. sericeus* of Mauritius; the other, *R. repens* of America. Fiji has one species each of three Asiatic genera, *Ternstræmia*, *Saurauja* and *Eurya*. Hawaii and the Marquesas have each a species of the distinctively American genus *Waltheria*.

If we look rapidly at a few of the more important families we shall find that the Leguminosæ are not common in Polynesia; of the genus *Acacia* all the species peculiar

to this region are phyllodineous and the rest of this peculiar group is Australian. Among Rosaceæ the genus *Acacia* has one species peculiar to the Hawaiian Islands while some thirty other species are South American. Of Pittosporaceæ the genus *Pittosporum*, which is Australian in large part, has twelve species in New Zealand, ten in the Hawaiian Islands, six in Fiji, and one in Southeastern Polynesia. The family Rubiaceæ contains 7% of the flowering plants peculiar to the Hawaiian Islands, 14% of those peculiar to Fiji, and in New Caledonia some two hundred species are reported. In all the islands there are three hundred species, while Australia has scarce one hundred. There are several curious Compositæ in the Hawaiian Islands, *Wilkesia*, *Argyroxiphium* and *Remya*. The genus *Lipochæta* has one species in the Galapagos while twelve are Hawaiian. Of the Campanulaceæ, besides five species of *Lobelia*, there are five genera, *Brighamia*, *Delissea*, *Rollandia*, *Clermontia*, and *Cyanea* peculiar to the Hawaiian Islands, and another *Apetahia* peculiar to the Society Islands: the family is not found beyond those two groups in Polynesia: the centre of the Lobeliaceæ is American. Of the Urticaceæ the genus *Ficus* has a dozen species peculiar to Fiji, twenty-three (all but six peculiar) in New Caledonia. The Palms are all related to the Malaysian flora. In the Filices the relationship is well shown in the following table taken from Drake del Castillo:

The paucity of edible fruits is a feature of the Polynesian flora as is also the absence of poisonous plants on most of the islands. Although not rivaling the American economic woods in variety or beauty, there are nevertheless many choice timber woods in the Pacific Region. The koa of Hawaii, the kauri of New Zealand, the kou and kamani of the southern islands, and the eucalypti of Australia are both beautiful and valuable, although many are fast disappearing and I know of no serious attempt to cultivate them.

Throughout Polynesia proper the Kalo (*Caladium esculentum*) was the staple vegetable food, varied, in the southern islands with the Breadfruit (*Artocarpus incisa*), and to the west, especially on sand islands and in Micronesia, the fruit of the *Pandanus odoratissimus* is an important addition to the dietary. Bananas, yams, sugar-cane, kukui nuts, Canarium nuts, the fruits of some Myrtaceæ and Vaccinieæ were the principal fruits of the ancient Pacific-islander: all the fruits that now abound in the gardens and orchards have been brought since the time of Cook.

**Land Fauna.**—In eastern Polynesia rats and mice were the only indigenous mammals, but to the west the wonderful Marsupials of Australia and New Guinea, the fruit-eating bats and some small and comparatively unimportant mammals extend the list slightly. Reptiles are not more abundant. New Zealand and the Hawaiian Islands have no snakes. Samoa, Fiji and Micronesia have a few harmless forms; while Australia has numerous deadly species. Crocodiles are found in Queensland and on some of the islands not far distant, and the lizards of Australia are of many species and sometimes of considerable size. New Zealand has the curious Tuatara (*Hatteria punctata*, Gray), but as we go eastward the species and individuals diminish until on the Hawaiian Group there are but six small species of lizard, and these are disappearing before the introduced mongoos. Of the birds New Guinea has the remarkable Birds of Paradise, and Australia has many and most interesting species. New Zealand has the Kiwi, a remnant of some of the most wonderful birds, now extinct, that have ever lived. Samoa has another survival in the *Didunculus*, but again as we go east the birds grow scarce. In insect life the rule holds good and the fine butterflies and gigantic beetles of New Guinea give place to one or two diurnal lepidoptera on Hawaii, where the insect fauna has been well worked and although of great interest to the entomologist has little to interest by size or beauty of form.

The marine fauna is indeed as rich as the land fauna is poor, and the low coral islands of the central Pacific swarm with fishes which have always been the principal food of the inhabitants. These fishes are closely connected with East Indian forms. The great mammals of this ocean are far more important than those of the land and deserve far more notice than can be given in this sketch.

**Whales and the Whaling Industry.**—I place the whales and their pursuit together, for no other animals have caused such changes to the primitive inhabitants and no study of the ethnology of the Pacific can omit or fail to give its proper prominence to the whalers and their intercourse with the islanders of this ocean. The days are gone when fifty or more American whalers wintered or refitted in the harbors of the Hawaiian Group, but the effects of this intercourse will only cease when the weaker race has wholly succumbed to the advance of the white race. It is pleasanter to look for a moment at the whales than to consider the acts of their hunters. The polar whale (*Balaena mysticetus*) comes only into the most northern part of our region, but another species (*B. japonica*) is found from continent to continent nearly as far south as the Tropic of Cancer. Still another species is common south of Australia, around the South American continent, and to some extent between these points (*B. antipodum*).

The Sperm whale (*Physeter macrocephalus*) is found between Australia and New Zealand, in Micronesia and around certain groups as the Hawaiian, Marquesas, Fiji and Society Islands. It is much more tropical than the Balænas, and while the latter prefer the cold polar waters and seldom go beyond the cooler currents of the Pacific, the cachetot is found especially in the tropical region and serves to employ the arctic whalers during the off season in the northern seas. Besides these "nobility" of the whale kind there are lesser lights hunted in the Pacific as in the Atlantic. The humpback (*Megaptera hoops*) is found all along the American coast, at many of the central island groups in the tropics, and off the shores of New Zealand, New Caledonia and Australia. The Sulphurbottom (*Sibbaldia sulphureus*), Graywhale (*Rhachianectes glaucus*), Pacific finback (*Balaenoptera velifera*) and Rorqual (*B. davidsoni*) are found off Japan, in Bering Sea and off the American coast.

The pursuit of these great mammals employed many men and much capital as is well known. When in full force in 1846 there were 735 American vessels with an aggregate tonnage of 233,133 tons. It may perhaps be forgotten that a whale ship, from the length and hardship of the voyage was regarded as a sort of reform school for rather hardened young offenders who were not amenable to the good influences on land. Hence it happened that many of these quasi convicts escaped to the island Edens and played the part of the serpent. But with these important exceptions I believe the influence of the whaling industry was not one of preponderant evil. Many natives went as sailors on these ships and learned to work as they would never have learned in the *dolce far niente* of their homes, and it was often the advice of these travelled countrymen that opened the door to the white missionary. It is impossible to believe that the influence of the sturdy men who sailed from New Bedford and Nantucket was very bad. Have we not known them in their homes and shaken hands with their worthy descendants? Of the literature on this subject may be mentioned, F. D. Bennett, *Whaling Voyage Round the Globe, 1833-36*; Beale, *The Sperm Whale and its Captors, 1839*; *United States Fish Commission Report, 1875*; Scammon, *Mammalia of Northwestern America, 1884*.

**Inhabitants and Their Origin.**—In no part of the primitive world has there been more confusion of races, more difficulty in exact classification, and, it must be added, more ignorance of people than in the Pacific. We have prehistoric remains in Easter Island, in Tongatabu, in Ponapé and in the Marianas of which Ethnologists know no certain origin. The great leaders of Ethnology have measured a few skulls (too often labelled "South Seas") and have compared imperfect vocabularies, and then, with some hesitation it is true, have made family arrangements in which they do not agree among themselves, and which farther knowledge may modify or replace. But this is not the place to enter into a discussion of the different systems, nor to follow

that fascinating—because so difficult—quest for the origin of the peoples we now find on the islands of the Pacific. All admit they are not autochthonous, but theories of their origin start both from the East and from the West. One claims that the Polynesians, to take one of the more evident divisions of the islanders, came from the great Malayan islands and worked eastward; another contends that they had their origin in South or Central America and were dispersed through the great ocean by the Trades; while another, admitting their Asiatic birth, claims that they not only crossed the Pacific and peopled it, but continued their planting to the American continent. Let the theories await more complete knowledge: in the meantime all theorists in this domain are helping towards a final solution.

We may, to save repetition in the list of island names of which this is an extended introduction, adopt the most common and perhaps most correct classification into three main divisions without going beyond our region for relationships. These are Papuan, Micronesian and Polynesian. With the first we place Australians and the people of New Guinea, Pelew Islands, Bismarck Archipelago, Solomon Islands, New Hebrides, New Caledonia, Loyalty Islands and Fiji. The Australians are strongly differentiated from the others in mental if not in physical traits, and the Vitians are strongly tinctured with Polynesian blood, but on the whole the islanders mentioned agree in the following important matters; flat and abundant hair on both head and body; skin dark—almost black in Australia, Solomon Islands and New Caledonia, chocolate-colored in New Guinea, yellowish (from Malay admixture) in the Pelew Islands; scar or paint the body, but do not *tatu*; do not circumcise except in Australia, Fiji and some islands of the New Hebrides; heads dolichocephalic, prognathous and phanerozygomatic; nose broad and hooked; lips intumescent but not so full as in the negro; height medium; chew betel rather than awa; have artistic feeling in decoration (especially in New Guinea and the Bismarck Archipelago); cook in earthen vessels; are cannibals (except Australians and the Pelew Islanders); are noisy and restless, decidedly democratic, have no kings nor hereditary chiefs; show no sentiment in favor of clothes; are irreligious and exhibit great diversity of dialects.

The Micronesian division includes the Marianas, Caroline, Marshall and Gilbert groups. It is a debatable ground between the first and last divisions. The people are a plainly mixed race of Papuan and Polynesian ancestry with considerable Malay admixture at the western end. They are less democratic than the Papuans, more so than the Polynesians; use looms (as do also the New Hebrideans); are good navigators; *tatu* to some extent (Carolines); considerable diversity of dialects with many Polynesian roots.

In the Polynesian Group are the Hawaiians, Samoans, Tahitians, Marquesans, Tongans, Paumotuans and Maoris. They have long, black, cylindrical hair, little of it on body, hence addicted to *tatuing* in which they excel; brachycephalic, and not

very prognathous; fairly large stature; light-colored; very large dark eyes; practise circumcision; are not cannibals (except Marquesans and Maoris); caste institutions with kings and chiefs; are very religious; kapu system in full force; use awa, never betel; no looms, no earthen vessels; cook in earth ovens and with hot stones; make kapa or bark cloth (as do also the Solomon Islanders and some tribes of New Guinea); have a strong sentiment of dress; have a common language from Hawaii to New Zealand; are good seamen and fishermen. In ancient times were good navigators journeying in their canoes to almost incredible distances as seen in the ancient voyages of the Hawaiians to Tahiti.

In every generalization there must be many exceptions, but the characters here given are very general. The hybrids are very numerous and most difficult to place when met casually. The Papuan + Polynesian hybrid is much more homogeneous, that is, more difficult to pick out traits of either parent, than is the mixture of Chinese + Polynesian, where the Mongolian predominates but the Polynesian is still in evidence. Otherwise half-breeds in the Pacific are much as half-breeds are everywhere else.

**Cannibalism.**—This custom which arouses a curious horror in most civilized people, although man is a carnivorous animal and human flesh is not unwholesome, was once prevalent in the Marquesas, Fiji and New Zealand, and is now in full force in the Solomon Islands, New Hebrides, Bismarck archipelago and parts of New Guinea. Elsewhere in the Pacific it has never existed or has yielded to the pressure of civilization. The origin of this curious habit has been ascribed to various causes, as for instance, piety—the nearest relative devouring the remains of a dear corpse to place them nearest the seat of the affections and to protect them from outrage by the enemy. Such disposal has occurred on groups not otherwise anthropophagic. To absorb the qualities of another is, I believe, the most orthodox application of cannibalism. Brave and tried warriors were eaten, never women or children, and the true cannibal never allowed a woman to eat a man! Certainly the portions in which the desired qualities were supposed to reside were most sought, the hand, the heart, the testes. This effect of food is, perhaps unconsciously, recognized in the navy of a great nation where mutton is never eaten lest the marines become sheepish. It is worthy of note that the worst cannibals in the Pacific were also the most skilled producers. Maori and Marquesan carvings, Solomon Island canoes, New Hebridean mats are all in evidence. Revenge; that sweet passion in the savage thought,—to cook an enemy like a dog or pig, to drink his blood, is world-wide in desire if not in full execution, and Kali the bloodthirsty wife of Shiva in the Hindu pantheon is not the only primitive deity in which this passion is personified. Needed food: man, although carnivorous, did not suffer from famine on the Pacific Islands, at least on those where anthropophagy prevailed, but it has been suggested that in the long voyages food may have failed as it

has too often in the voyages of civilized men, and the weakest has been sacrificed to save life. The strong persistence of the habit once acquired is fully recognized. This might explain the prevalence of the custom among Maoris and Marquesans at opposite ends of the Polynesian domain. Cakobau used to boast that he had eaten one hundred and seventy-five of his fellow Vitians, and a New Hebridean belt in the Bishop Museum is hung with one hundred and thirty-five incisors, the tally of so many victims of its chiefly owner; but the commoner got little of this rich food, and now it has come that under British rule the last vestiges of this custom have been wiped out in the two South Pacific strongholds, New Zealand and Fiji. Even the trophies of cannibalism, arm and leg bones inserted in the stem of a growing tree, are more common in museums than in the Fijian archipelago. Evidently in the Pacific it will soon be only a matter of history.

**Languages.**—While among the Polynesian islanders there is an unmistakable relationship of language, in the Melanesian the confusion of Babel *seems* to rule supreme. On not a few small islands of Micronesia several mutually unintelligible tongues are found, and it would require much imagination to trace any connection. The languages of New Guinea are so little known that no comparisons can be drawn between them and the Melanesian, nor can it be stated with authority whether the Malay element is more preponderant there than in the tongues farther east. Codrington (in the work mentioned below) seems to regard the Melanesian as superior to the Polynesian. The languages of Australia offer other differences and still less relationship to the Malay. Even where certain common words are selected and compared in the forty or fifty dialects of which vocabularies are accessible, the result is by no means satisfactory, and to classify one must have recourse not to roots but to grammatical structure, of which not enough is at present known to warrant any definite scheme. To enter into the peculiarities of even the best known would require not only much space but a knowledge beyond the reach of the present writer, and the subject will be left with a few examples of the languages of the Pacific as they have been printed. Those who are curious to know more may consult the works of which a list is appended. The similarity between the Polynesian dialects is so great that a native of one group finds little difficulty in making himself understood in any other. Codrington, R. **Religion.**—As has already been said the Polynesians were a religious people and their theogony was much the same on all the groups. The attributes of the gods differed widely, and the forms of worship as well. On the Hawaiian Group Maui, Kane and Lono were the great trinity while their subordinates were reckoned by the 40,000 and the 400,000. Images were in demand and an odd beach-worn pebble would serve where the more elaborate carvings could not easily be obtained. Every guild

had its deity, and the man often had a god distinct from that of his wife. In New Zealand divine images were rare and a very few of inferior workmanship have come to us. It is remarkable that when the Maoris excelled in wood-carving their skill was expended on other than divine images. So it was to even a greater extent with the Fijians and Samoans. Of the Society Islands idols of most complicated form and good workmanship are to be seen in the British Museum, but nowhere else. In Tonga images and bundles of sticks alike served to fix the wandering prayers of the people. Human sacrifices were most common on the Hawaiian Islands where cannibalism did not exist, least common among the anthropophagous Vitians.

In the western Pacific the objects of worship were generally departed spirits, and a refined form of this ancestor worship is seen in the curious custom of *Korowars* in New Guinea which recalls the image always provided for the *ka* of the ancient Egyptian. The idols of the Marquesan at one end of the Pacific and of the New Hebridean at the other were elaborately cut from wood or stone. The temples of eastern Polynesia were built of stone in substantial manner, while in the west the Melanesian erected ephemeral structures of cane or palm leaves, and the Fijian built with sinnet the hardly more durable "Devil Houses" of his cult. Had not the Hawaiian temples been destroyed by the hand of man they would have lasted for many centuries; this is also true of the morais of the Tahitians.

Throughout the Pacific there was an unseen world recognized by all. Good spirits and bad, white spirits and black were everywhere and were generally objects of dread and propitiation. Night was especially the time when the spirits drew near to human beings, and even when Christianity has replaced many of the ancient beliefs a Pacific islander does not like to travel alone in the dark.

**Missions.**—This is not the place to speak at length of the great work the devoted bands of missionaries have been doing for the last eighty years in the Pacific region. All sects, from the Buddhist and Mahometan on the west to the Protestant, Catholic and Mormon on the east have earnestly ploughed some portion of the field, and the harvest has in many cases been good. With the religious Polynesians the work was not so difficult, and in turn the Tongan, Samoan and Hawaiian converts became earnest and successful helpers in the missions to the other groups. In the Marquesas faithful Hawaiian missionaries have labored for many years, and so have they done in Micronesia. The Melanesian Mission has also made good use of native converts in reclaiming the heathen. The whalers made it possible for the missionaries to land on many islands, and the missionaries have in turn made it possible and pleasant for other civilized people to dwell where formerly paganism and cannibalism were supreme.

**Kapu System.**—The early voyagers found almost everywhere on the islands at which they touched a system of which the name has become a common English word. They recognized it as a method of prohibition against which they were constantly striking, but to the present day no one has fully treated of the wonderful political and religious engine by which the Polynesian first, the Melanesian in imitation controlled the wishes and acts of the common people. It was a mighty power in the hands of the ruler, whether priest or chief, and it might be exemplified in the strip of white kapa that, bound around a coconut tree, preserved the fruit from all marauders; or the tuft of the same fragile material at the end of a slender wand which placed in the path would turn an army aside into the jungle. It might be temporary, as the order of silence which at stated times fell on all the land and not even a dog might bark or a cock crow while the kapu lasted, or it might be the lasting prohibition which denied to woman certain choice articles of food which man was free to eat.

The origin of kapu is unknown but it must have been remote, so elaborate had the system become. It had grown until it became so complicated that the understanding of the common people could not compass it, and even to the chiefs its restrictions grew unbearable until in the Hawaiian Islands, where it reached its most perfect development, a great uprising swept it away and left a clear field for the introduction of Christianity.

My knowledge is not sufficient to permit me to decide which was the greatest achievement of the Polynesian mind, the Kapu or the system of water rights. Both are admirable and should sometime receive the attention they deserve in the thought of scholars. For information on these subjects consult: *Grey's Polynesian Mythology*, London, 1855; *Codrington, R. H., The Melanesians; Studies in their Anthropology and Folk-lore*, Oxford, 1891; *Gill, W., Myths and Songs of the South Pacific*, London, 1876; *Stair, J. **The Partition of the Pacific.**—Unlike the partition of the African continent, the appropriation of the islands of the Pacific has led to no important wars or diplomatic difficulties, and the division is now nearly complete. Foreign nations have not quarrelled over the spoil and the natives have generally acquiesced in a change of sovereignty which they could not well prevent. In New Zealand the Maoris made a fierce resistance to the invaders, but this did not last long. France found some fighting before she could control all the south-eastern portion of the Pacific, and Spain found some energetic protests to her work in the Marianas. Elsewhere it was "Good God, good devil" to the natives so long as they had their accustomed food and were not compelled to work.

Among the powers there was slight friction at times. The Hawaiian Islands were seized by England (Lord George Paulet) but relinquished, threatened by France (La Place) and Japan until the United States put an end to all claims by annexation. In Micronesia Germany's claim to a part of the Carolines was adjudicated by the Pope, and now Spain has sold all of that extensive archipelago as well as the part claimed, and thrown in the remnant of the Marianas to boot to Germany. The tripartite attempt to govern Samoa threatened to make trouble, but this was happily averted by the withdrawal of Great Britain and the amicable division of the group by Germany and the United States. When by the fortune of war the United States acquired Guam and the Philippines, Spain ceased to be an important owner of Pacific territory, and England, the United States, Germany, France and Japan control the entire region.

When the question of a trans-Pacific telegraphic cable arose there was active annexation by Great Britain of all islands, islets or rocks that happened to be in any of the tracks proposed, and Japan seized Marcus Island in imitation of more important powers. In the hurry some islands were taken that had already been appropriated by another government, but the real value of these bits of sand and rock is not sufficient to make trouble in these days of wiser arbitration.

The colonization of these islands, some of them without inhabitants, others with a dying population, but many of them most attractive in scenery and climate, has not yet progressed far except on the Hawaiian Islands, New Zealand and Australia. Germany has an elaborate official organization in her colonial islands, but officials alone will not bring prosperity to a colony. France has some choice islands, but for some reason immigrants do not increase there. Will the United States be as successful as England in her new colonial experience?

**In Conclusion.**—A few words of more formal introduction may lead the reader to the geographical material to which this long chapter is the preface. The maps have been constructed from the best government charts, although they are copies of no one chart; neither are they, like the composite photograph, a combination of many. Selection has been made, but no serious attempt has been made to produce a finished chart; it would be useless in the present state of our knowledge of the Pacific islands, and it would not greatly surprise the author should the exact surveys that must be made in the near future, expose great inaccuracies, nay, even render the present maps quite unrecognizable as delineations of the same island or group. But they will have served their modest purpose: the Primer must come before the Reader, and if they will in any way clear the path of the future geographer of the Pacific by giving ground for just criticism, they will not have been offered in vain.

The needs of the administration of a museum like this that bears the honored name of Mrs. Bishop, have compelled much reading of voyages and descriptive accounts of the Pacific region, and notes have been made for years and arranged alphabetically

on uniform slips, which now number nearly 4000, and the convenience for reference has been so great that these notes have been made the basis of the list of islands here given.

I am sorry that I am not so familiar with many of the dialects of the Pacific as to be always sure of the orthography, or even of the meaning of names, but I have consulted the best authorities within my reach. In some cases I may seem to have wilfully left the right and chosen the wrong, as in the case of the name *Paumotu* which I have retained as the best known throughout this region, although the form *Tuamotu* adopted by the French may be more correct. The first word of the compound is usually dropped among traders and navigators in the south Pacific and *Motu* alone used.

As to the heights given I have met with difficulty. Findlay's Directory may state the height of an island as 3000 feet, a later chart will put it at 2100, while a still later Hydrographic report will call it 1200, not one of these important publications giving the authority. An ordinary estimate should not vary so much, and I was inclined to omit all heights as well as population, but finally have given them as merely approximate and the reader can attach his own value.

To supplement the meagre information given in the Index authorities have been sometimes appended to the text, and the following list will assist some perhaps to follow more closely the information attainable. It does not of course pretend to be even a partial Bibliography, but simply a list of some of the more important works used in the compilation of this Index.

## AN INDEX TO THE NAMES OF THE ISLANDS OF OCEANIA.

---

**Aasu**, or Paris, on the north coast of New Guinea,  $3^{\circ} 22' S.$ ,  $143^{\circ} 25' E.$  Thickly wooded and inhabited. On the same reef is the islet Unei.

**Aatao**, one of the many names given to Angatau, Paumotu islands. **21.\***

**Ababa**, see Torres islands. Also called Baba.

**Aba evara**, the western islet of the Basses group, Louisiade archipelago.

**Abaga gaheia**, or Abagaheia, eastward of Pana trusima (Earle) in the Louisiade archipelago. 1.7 m. long, 585 ft. high.

**Abau**, in Cloudy bay on the south coast of New Guinea.  $10^{\circ} 13' S.$ ,  $148^{\circ} 42' E.$

**Abaura**, or Midge islands, three low and wooded islets near Fly river, south coast of New Guinea.  $8^{\circ} 29' S.$ ,  $143^{\circ} 39' E.$

**Abavi**, in Cloudy bay on the south coast of New Guinea.  $10^{\circ} 15' S.$ ,  $148^{\circ} 44' E.$

**Abgarris**, also called Faed islands, in the Bismarck archipelago. A chain of low islands, of which Goodman is the southernmost, extending 30 m. NW-SE. North point  $3^{\circ} 09' S.$ ,  $154^{\circ} 22' E.$  Discovered by Captain Renneck of the *Lyra*. **10.**

**Abian**, a form of Apaiang, Gilbert islands.

**Abingdon**, of the Galapagos.  $0^{\circ} 34' 25'' N.$  1950 ft. high. Resort of the Buccaneers.

**Abo**, on the coast of New Guinea.  $8^{\circ} 22' S.$ ,  $143^{\circ} 07' E.$

**Abuda**, within Angasa reef of the Fiji group.  $18^{\circ} 56' S.$ ,  $181^{\circ} 26' 30'' E.$

**Abutolema**, without Angasa reef of the Fiji group.  $18^{\circ} 53' 30'' S.$ ,  $181^{\circ} 24' E.$  60 ft. high.

**Abutuena**, Angasa reef of the Fiji group.

**Achir** = Uea of the Loyalty group. **13.**

**Actæon**, or Amphitrite islands in the Paumotu group were discovered in 1833 by T. Ebrill in the Tahitian trader *Amphitrite*. The names are much mixed on charts. Maturei vavao, Tenarunga, Vehanga and Tenararo. **22.**

**Adabadana Kawa**, of the Talbot group on the coast of New Guinea, between Kawa and Mata Kawa.  $9^{\circ} 17' S.$ ,  $142^{\circ} 11' E.$

**Adams**, southernmost of the Auckland islands, belonging to New Zealand. 2000 ft. high.

**Adams** (Ingraham), see Huapu of the Marquesas. **23.**

**Adams** (Roberts), see Nukuhiva of the Marquesas. **23.**

**Adèle**, easternmost of the Louisiade archipelago, only 500-600 yards in diameter.  $11^{\circ} 29' 50'' S.$ ,  $154^{\circ} 26' 10'' E.$  Discovered by Captain Coutance.

**Adi**, on the coast of New Guinea.  $4^{\circ} 05' S.$ ,  $133^{\circ} 30' 30'' E.$

**Admiralty Islands** were discovered by Schouten and Lemaire in July, 1616. The group consists of one large and many small islands. Carteret visited it in 1767. Admiralty, the largest, was described by D'Entrecasteaux in 1792. It is 50 m.

\*Names considered more correct are printed in heavier-faced type. The number at the end of the paragraph indicates the map on which the island will be found.

E-W.  $\times$  15 m. N-S. 3000 ft. high. *Challenger* visited the group and named after the officers nearly every bay, point or rock. Jesus Maria, La Vandola, Elisabeth, Sugar-loaf, Western, Wild, Suhm, and many mere rocks compose this interesting group now included in the Bismarck archipelago. The inhabitants are not very dark, often dye their black hair red; wear little clothing—the men, as their sole garment, a white cowry shell; use splints of obsidian for knives and spear points; carve fine circular bowls often of great size; principal food, sago. Centre of principal island about  $2^{\circ} 10' S.$ ,  $147^{\circ} 00' E.$  **10.**

**Admiralty Islets**, a small group a mile and a half from north end of Lord Howe island.

**Adventure**, see Motutunga of the Paumotu islands. **21.**

**Adventurer Islands** are two islands about half a mile in extent, low, wooded, and connected by a reef. Reported in 1877 by Mr. Ebury, master of the *Adventurer*. Existence is doubted.

**Agaga**\* = Anganga of the Fiji group.

**Agakanitai**, an islet of Mangareva.

**Agata**, south of Yasawa towards Naviti, Fiji. Is it confounded with Agate?

**Agate**, in the Yasawa group, Fiji, near Naviti. Small, rocky, high.  $17^{\circ} 11' 30'' S.$ ,  $177^{\circ} 08' 10'' E.$  Named for one of the artists of the United States Exploring Expedition. **14.**

**Agomes** = Hermit islands in the Bismarck archipelago. **10.**

**Agrigan**, of the Marianas. A volcanic island 6 m. long by 2 m. broad, and 2000 ft. high.  $18^{\circ} 48' N.$ ,  $145^{\circ} 40' E.$  In 1810 Captain Brown and other Americans with several families of Hawaiians formed a colony on this island, but it was broken up by the Spaniards who destroyed the plantations and carried off the Hawaiians to slavery and they were never again heard from. See Chamisso in Kotzebue's voyage. For map of the group see Marianas.

**Aguarí**, see Santa Catalina, Solomon islands. **II.**

**Agué**, islet of the Harcourt group on the northeast coast of New Caledonia.

**Aguijan**, of the Marianas, was discovered by Magelhães March 6, 1521, in  $14^{\circ} 51' N.$ ,  $145^{\circ} 30' E.$  It is 3 m. long by 2 m. wide and uninhabited.

**Ahangatou** = Angatou of the Paumotu group. **21.**

**Ahii**, or Peacock, is low, coral, inhabited, and about 13 m. long. The east end is  $14^{\circ} 27' 20'' S.$ ,  $146^{\circ} 13' 24'' E.$  **20.**

**Ahunui**, also called Fangataufa and Cockburn, of the Paumotu group, was discovered by Captain Beechey in 1826 and named after the Comptroller of the Navy. It is a closed lagoon island nearly 4 m. in diameter and the southwest end is in  $22^{\circ} 17' S.$ ,  $138^{\circ} 39' 53'' W.$

**Aidoumea**, or Aidoema, on the south coast of New Guinea.  $3^{\circ} 58' S.$ ,  $134^{\circ} 00' E.$  Called formerly Isla del Capitano Luis Vae de Torres from its discoverer.

**Ailinginæ**, or Remski-Korsakoff of the Marshall islands is 12 m. southwest from Rongerik. It is 15 m. E-W. and 4 m. N-S.; uninhabited. It was discovered by Kotzebue, and the southwest point is  $11^{\circ} 08' N.$ ,  $166^{\circ} 20' E.$

\*Although this is the correct form it has seemed best in giving the Vitian names to adopt the phonetic spelling: g is pronounced ng, c is th and h is mb. Thus Cakobau is pronounced Thakombau; Baga, Mbanga, etc.

**Ailingjappel**, islet of Mentschikow or Kwadjelin in the Marshall islands.

**Ailinglablab**, of the Marshall islands, was discovered by Captain Bond in December, 1792. It is 36 m. long and composed of many islets on the ring encircling in a very irregular way a lagoon. The northwest end is 8° 11' N., 167° 58' E.

**Ailuk**, also Tindal, Watts or Krusenstern of the Marshall islands, was discovered by Captain Marshall in 1788, and is 20 m. long and 5-8 m. wide. 10° 30' N., 170° 04' E.

**Ain**, wooded islet of Mengalia reef on the northeast coast of New Caledonia.

**Ainioro**, one of the Amazon islands on the south coast of New Guinea. 10° 21' S., 149° 17' E.

**Aiona**, islet of Murua or Woodlark in the Trobriand group. 9° 13' S., 152° 49' E.

**Aiou** = Yowl, west from the New Guinea coast.

**Aiperé**, a name sometimes given to Tanna of the New Hebrides.

**Airik**, islet of Maloelab in the Marshall islands. 8° 31' N., 171° 10' 30" E.

**Aitutaki**, of the Hervey group, was discovered April 11, 1789, by Captain Bligh of the *Bounty* a few days before the mutiny broke out. It is high and 18 m. in circumference, with a reef on the southwest coast. Population about 1500. The finest tatuing I have ever seen was on two Aitutakian sailors. 18° 54' S., 159° 41' W. 23.

**Aiva**, is a double islet, Aiva-va and Aiva-thaki, between Lakemba and Oneata of the Fiji group; low, not exceeding 30 ft.; uninhabited; 9 m. × 3.5 m. 18° 21' S., 181° 17' E. 14.

**Aivei**, islet on the coast of New Guinea. 7° 50' S., 145° 10' E.

**Aivo**, or Renny, is on the east side of Malaita, Solomon islands, low and wooded; less than a mile NW-SE. 8° 58' S.

**Akahaina**, or Fakaina, or Predpriatie, of the Paumotu group was discovered by Kotzebue in 1824. It is low, inhabited, about 4 m. long. The centre is in 15° 58' S., 140° 11' 30" W. 21.

**Akamaru**, or Wainwright, is an islet of Mangareva of the Paumotu group. 22.

**Akamokum**, islet of Peleliu of the Pelew or Palao islands.

**Akani**, a group of islets in the Bismarck archipelago. 3° 20' S., 154° 36' E.

**Akiaki**, or Thrum Cap of the Paumotu group was discovered by Bougainville in 1768 and by him called Les Lanciers; inhabited, though a low coral bank less than a mile in diameter. 19° 17' 40" S., 138° 42' W. 22.

**Akoo**, islet of Ontong Java, Solomon islands. 5° 37' S., 159° 34' E. 11.

**Alapawa**, in Cook strait, New Zealand. 41° 12' S., 174° 20' E.

**Alau**, islet off the east coast of Maui, Hawaiian group. 20° 43' 50" N., 155° 58' W.

**Albany**, on the coast of Australia. 10° 43' S., 142° 36' E.

**Albatross**, islet at the mouth of Saluafata harbor on Upolu, Samoan group, 9 m. east of Apia.

**Albemarle**, of the Galapagos, 60 × 15 m., 4000 ft. high; six volcanoes; largest of the group.

**Alcester**, a group of three islands of the Trobriand group extending about 3 m. ENE-WSW. The natives are most skilful canoe builders. 9° 29' S., 152° 30' 45" E.

**Alcmené**, an islet 3 m. southeast from Isle of Pines, Loyalty group. 22° 40' S., 167° 29' E.

**Alden**, of the Hudson group, Fiji. High and rocky. 17° 37' 20" S., 177° 00' E.

**Alefa**, of the Tongan group is in  $20^{\circ} 00' S.$ ,  $174^{\circ} 30' W.$

**Aleford**, group of four small and reefed islets at the head of Milne bay at the south-east end of New Guinea.  $10^{\circ} 22' S.$ ,  $150^{\circ} 20' E.$

**Alele**, coastal islet of New Guinea.  $7^{\circ} 52' S.$ ,  $145^{\circ} 13' E.$

**Alet**, islet of Enderby, Caroline islands. At the east of the fringing reef which extends 5.5 m. E-W. and 3 m. N-S. is Pozoat.  $17^{\circ} 19' 25'' N.$ ,  $149^{\circ} 15' E.$

**Alewa kalou**, Awakalo or Round, an uninhabited rocky islet of Fiji,  $500 \pm$  ft. high.  $16^{\circ} 40' S.$ ,  $177^{\circ} 46' E.$

**Algrail**, islet of Wolea, Caroline islands.

**Alita**, southernmost of the Trois Sœurs, Solomon islands. **II**.

**Allen**, one of the Wellesley group in the Gulf of Carpentaria.

**Allison**, is between L'Echiquier and Durour in the Bismarck archipelago. Discovered by Captain Allison in 1885. 2-3 m. NW-SE., 100-150 ft. high, covered with trees.  $1^{\circ} 25' S.$ ,  $143^{\circ} 26' E.$

**Allufatti** = Alofa, Horne islands.

**Almagan**, an active volcano of the Marianas. It is 2.2 m. N-S. by 1.5 E-W., and 2316 ft. high.  $17^{\circ} 36' N.$ ,  $145^{\circ} 50' E.$  See map under Marianas.

**Alofa**, one of the Horne islands southeast from Fotuna. It is 6 m. E-W. by 3 m., and 1200 ft. high; volcanic.  $10^{\circ} 16' S.$ ,  $178^{\circ} 00' W.$  **18**.

**Alu**, a wooded coral island 150 ft. high at the east end of Shortland island, Solomon islands. It is well cultivated, and surrounded, except on the northwest side, with a fringing reef.  $7^{\circ} 08' S.$ ,  $155^{\circ} 50' E.$  **II**.

**Amanu**, or Möller, of the Paumotu group was discovered by Captain Bellingshausen in 1829. It is 18 m. NE-SW. and 8 m. wide. Inhabited and abounds in pearl oysters. The northeast point is  $17^{\circ} 43' S.$ ,  $140^{\circ} 39' W.$

**Amat**, Isla d'. In 1774 Spanish priests gave this name to Tahiti.

**Amazon Islands**, two small islands in Amazon bay on the south coast of New Guinea. They are called Ainioro and Laraoro. When, some years ago, natives attacked H. M. S. *Bramble* a canoe filled with female warriors accompanied the party, hence the name of both bay and islands.

**Ambatiki**, of the Fiji group, is nearly an equilateral triangle of 2 m. on a side and surrounded by a reef. It is 750 ft. high, and inhabited.  $17^{\circ} 47' S.$ ,  $179^{\circ} 10' 30'' E.$  **14**.

**Ambau**, see Mbau of the Fiji group. **14**.

**Ambrym**, of the New Hebrides, was discovered by Cook in 1773. It is volcanic, Mt. Marum having had an eruption in 1888, and is 22 m. E-W. and 17 m. N-S.; about 3000 ft. high; population dense.  $16^{\circ} 10' S.$ ,  $168^{\circ} 05' E.$  **12**.

**Amédée**, islet of New Caledonia, is 10 m. off Noumea in  $22^{\circ} 28' 44'' S.$ ,  $166^{\circ} 28' 40'' E.$  On it is a fine lighthouse 174 ft. high.

**Ameré**, islet on the southeast reef of New Caledonia.

**Amesse**, islet of Namoluk of the Caroline islands.  $5^{\circ} 45' 15'' N.$ ,  $153^{\circ} 16' 30'' E.$  **4**.

**Amicitia**, an island perhaps identical with Oraluk of the Carolines. **4**.

**Amota**, one of the Hermit islands, in  $1^{\circ} 32' S.$ ,  $144^{\circ} 55' E.$  **8**.

**Amphlett Islands** are northeast of Moratau of the D'Entrecasteaux group, about  $9^{\circ} 20' S.$ ,  $150^{\circ} 48' E.$  There are eight or more small islands, wooded and of moderate height, forming a broken chain parallel to the coast. **9**.

**Amsterdam**, islet on the coast of New Guinea.  $0^{\circ} 20' S.$ ,  $132^{\circ} 08' E.$

Amsterdam (New), a name given by Tasman, in 1643, to Tongatabu.

**Amytideu**, an islet of Namonuito of the Carolines. 4.

**Anaa**, or Chain of the Paumotus, was discovered by Cook in 1769. The northwest point is in  $17^{\circ} 23' S.$ ,  $145^{\circ} 38' 30'' W.$  In 1874 there were 1500 inhabitants and 7,000,000 coconut trees. Inhabitants formerly war-like, good sailors, and cannibals; obtained control of many of the neighboring islands. 21.

**Anabadibadila**, islet of the Dumoulin group on the southeast coast of New Guinea. It is 17 ft. high.

**Anacoretas**, called also Hermit, Monk's, Anchorite, were discovered by Bougainville, August 7, 1768. There are five or six islets covering a space 2.5 m. long. The inhabitants are said to resemble Chinese.  $0^{\circ} 50' S.$ ,  $145^{\circ} 35' E.$  8.

**Anagusa**, or Bentley of the Louisiade archipelago, in  $10^{\circ} 43' S.$ ,  $150^{\circ} 43' E.$ , is 1.2 m. E-W. and half a mile broad; inhabited; 350 ft. high.

**Anakarukarua**, one of the Dumoulin group on the coast of New Guinea. 225 ft. high. Anangai, see Wolea, Caroline islands.

**Anataxan**, or Anatajan, of the Marianas, is 5 m. E-W. and 1.5 N-S., about 1200 ft. high; volcanic.  $16^{\circ} 19' N.$ ,  $145^{\circ} 35' E.$  See map under Marianas.

**Anatunga**, islet on the north coast of Vanua levu, Fiji, north of the entrance to the Lekutu river.

**Anchor**, low, small, wooded on northeast of East cape of New Guinea.

**Anchorage**, or Pass at the mouth of the lagoon of Taka or Suvárov.  $13^{\circ} 13' S.$ ,  $163^{\circ} 09' 15'' W.$

**Anchorage**, islet of Stewart island, New Zealand.

Anchorite, see Anacoretas.

**Andatavie**, marks the north limit of Ngaloa harbor, Fiji. It is 165 ft. high.

**Andema**, or Ant, of the Carolines, was discovered by Lütke and is about eight miles west of Ponapé. It consists of a dozen coral islets and is not permanently inhabited; belongs to a chief of Ponapé, and is resorted to for fish and turtle. The name has been explained to mean Ant over there.  $6^{\circ} 45' N.$ ,  $158^{\circ} E.$  5.

**Andiwathe**, islet 250 ft. high, off the west coast of Vanua mbalavu, Fiji. 14.

**Andrew**, near the centre of Hercules bay, low and wooded, on the northeast coast of New Guinea.

**Androna**, in the Yasawa group, Fiji, extends 3 m. by 1.2 and is 900 ft. high. The north point is in  $16^{\circ} 52' S.$ ,  $177^{\circ} 24' 30'' E.$  14.

Anegada, La. Quirós discovered January 26, 1606, an island which he called Luna puesta; Gaspar Gonzales de Leza called it La Anegada, and José Espinosa named it Encarnacion.

**Aneiteum**, was discovered by Cook in 1773 in his passage through the New Hebrides. It is 10 m. E-W. and 6 m. N-S., 2788 ft. high, and has 1500 inhabitants. Southwest point is in  $20^{\circ} 15' 17'' S.$ ,  $169^{\circ} 44' E.$  In control of the Presbyterian Mission.

**Anganga** (Agaga), high, uninhabited island of Fiji. The east end is in  $16^{\circ} 34' 30'' S.$ ,  $178^{\circ} 38' 20'' E.$

**Angasa** is 150 ft. high and has three islets within the same reef in Fiji.  $18^{\circ} 55' S.$ ,  $181^{\circ} 28' E.$

**Angatau**, also called Arackcheeff or Araktchev and Ahangatiu, is a low island of the Paumotu group, discovered by Bellingshausen in 1820; 200 inhabitants.  $15^{\circ} 52' S.$ ,  $140^{\circ} 52' W.$  **21.**

**Angaur**, see N'yaur, of the Palao or Pelew islands.

**Angerimus Islands**, in Geelvink bay on the north coast of New Guinea.  $2^{\circ} 50' S.$ ,  $135^{\circ} 00' E.$

**Angriffe**, or Attack, is connected with New Ireland by a reef. It was called by the second name from a war-like attempt on a boat of the German war ship *Gazelle*.  $2^{\circ} 55' S.$ ,  $151^{\circ} 08' E.$

**Anhar**, see Anaa or Chain, in the Paumotu archipelago.

**Anil**, islet of Namu, Marshall islands.

**Aniwa**, or Iummer or Nina, of the New Hebrides, is about 2 m. long. It is a station of the Presbyterian Mission.  $19^{\circ} 18' S.$ ,  $169^{\circ} 38' E.$

**Anna**, or Current, was discovered in 1761; it is low, half a mile in diameter, and inhabited.  $4^{\circ} 39' N.$ ,  $132^{\circ} 04' E.$

**Annan Islands**, three in number, off the north end of Viti levu, Fiji. The group extends 4 m. by 0.7 m., and rises to a height of 610 ft. North point,  $17^{\circ} 30' 40'' S.$ ,  $178^{\circ} 12' E.$

**Annamokka**, or Rotterdam, Tasman's name for Namuka of the Tongan group.

**Annatam**, a form of Aneiteum, of the New Hebrides.

**Anne**, islet in the Bismarck archipelago.  $4^{\circ} 57' S.$ ,  $151^{\circ} 12' E.$

**Annula**, see Anuda.

**Anologo**, one of the Matema islands, Santa Cruz group.  $10^{\circ} 07' S.$ ,  $165^{\circ} 38' E.$  It extends 1 m. E-W., and is 120 ft. high; w.  $\frac{3}{4}$  S., 17 m. from Nukapu. British protectorate August 18, 1898.\*

**Anonima**, see Namonuito, Caroline islands.

**Anser**, or Glennie, a small group west of Wilson point, south coast of Australia in Bass strait.

**Anson**,  $13^{\circ} 0' N.$ ,  $141^{\circ} 35' E.$ , is of doubtful report. A name of Buka in the Solomon group.

**Ant**, of Andema group, Caroline islands.  $6^{\circ} 44' N.$ ,  $157^{\circ} 53' 30'' E.$

**Antipodes**, rocky, uninhabited group, 1100 ft. high.  $40^{\circ} 40' 53'' S.$ ,  $178^{\circ} 43' E.$  Not exactly the antipodes of London. Belongs to New Zealand. Called also Penantipode.

**Anuanuraro**, of the Paumotu archipelago, is a lagoon island named by Quirós, in 1606, San Miguel Archangel.  $20^{\circ} 24' 57'' S.$ ,  $143^{\circ} 31' 12'' W.$  **21.**

**Anuanurunga**, of the Paumotu archipelago, also called Four Crowns and Cuatro Coronadas, was discovered by Quirós in 1606.  $20^{\circ} 38' S.$ ,  $143^{\circ} 19' W.$  **21.**

**Anuda**, or Cherry, was discovered in 1791 by Captain Edwards in the *Pandora*. It is 1.5 m. in diameter and 325 ft. high. The inhabitants are Polynesian, make neat canoes, chew betel, and the men have an average height of 5 ft. 11 in. British protectorate declared Oct. 1, 1898.  $11^{\circ} 40' S.$ ,  $169^{\circ} 40' E.$  **12.**

**Anutunga**, low islet near Ngaloa bay on the north coast of Vanua levu, Fiji.  $16^{\circ} 37' S.$ ,  $178^{\circ} 40' E.$  Inhabited. **14.**

\*For the official notices of these Protectorates I am indebted to H. B. M. Consul in Honolulu, W. R. Hoare Esq.

**Anuu**, islet, 65 ft. high, east of Tutuila, Samoan islands.  $14^{\circ} 18' 40''$  S.,  $170^{\circ} 30' 40''$  W.  
Belongs to the United States. **15.**

**Aoba**, Omba or Leper, of the New Hebrides, was named by Bougainville Isle des Lépreux under a mistaken diagnosis. It is 17 m. long, 3000-4000 ft. high, and inhabited.  $15^{\circ} 15'$  S.,  $167^{\circ} 50'$  E. **12.**

**Aoré**, islet off the southeast coast of Espiritu Santo in the New Hebrides. The natives of this region are all cannibals.

**Aoura**, islet of Mokil in the Caroline archipelago.

**Apaiang**, or Charlotte, in the Gilbert group, was discovered by Captain Marshall in the *Charlotte*. It extends 16 m. by 6 m. and consists of six islets on a high reef. Population in 1886, 1300. The islets are Terio or Marshall, Allen, Gillespy, Clerk, Smith and Armstrong. Southeast point is in  $1^{\circ} 43' 25''$  N.,  $173^{\circ} 06' 45''$  E. **7.**

**Apamama**, Hopper or Roger Simpson, in the Gilbert group, was discovered by Captains Marshall and Gilbert in 1788. It extends about 12 by 5 m. and the islets are about 5 ft. above the sea. Population, 650. Northwest point  $0^{\circ} 30'$  N.,  $173^{\circ} 53' 35''$  E. **7.**

**Apapa**, or Cabras, on the west coast of Guam, Marianas.

**Apataki**, or Hagemeister atoll, in the Paumotu archipelago, was discovered by Captain Hagemeister in 1830. It extends 17 m. N-S.; is a low coral atoll and inhabited. The northwest point is in  $15^{\circ} 14'$  S.,  $146^{\circ} 32'$  W. **20.**

**Api**, called also Tasiko and Volcano, in the New Hebrides, extends about 25 m. NW-SE., and is 6-10 m. wide; fertile, well wooded, densely peopled; 2800 ft. high.  $16^{\circ} 38'$  S.,  $168^{\circ} 12'$  E. **12.**

Apia, a name of Apaiang, Gilbert group.

Aplin, see Idika, New Guinea.

**Apolima**, of the Samoan Group, is an extinct volcano, 547 ft. high, and five sea miles from Savaii. It covers 1.8 sq. m.  $13^{\circ} 49' 30''$  S.,  $172^{\circ} 03'$  W. **15.**

**Browne** is low, wooded, on the same reef with Carpenter and Tracey in Nares harbor, Admiralty group.

**Brumer**, see Tassai, coast of New Guinea.

**Brumer** group consists of six small basaltic islands; largest and westernmost 2.5 m. by 0.5 m., 665 ft. high, inhabited.  $10^{\circ} 46' S.$ ,  $150^{\circ} 22' E.$  People use canoes with outrigger and double mat sails. The other islands are Badila beddabedda bonarua, Harikoa, Gobi gobi, Bugomaki and Abana.

**Buchanan**, in the Admiralty group.  $1^{\circ} 56' S.$ ,  $146^{\circ} 28' E.$

**Budd**, an extinct volcano, 800 ft. high, in the Ringgold group, Fiji.  $17^{\circ} 26' 30'' S.$ ,  $180^{\circ} 23' E.$

**Buen viage** (Isla de), discovered by Quirós July 8, 1606. Probably one of the Gilbert islands. Quirós says: "Este dia se vió una isla de hasta seis leguas de boj; y porque hasta aquí no se habia encontrado tierra alguna ni bajo, ni otra cosa que impidien nuestro camino, se le puso por nombre *Buen Viage*: su altura son tres grados y medio parte del Norte. Acordóse de no ir á ella por no ser ya á propósito y por el riesgo de ser baja." *Viages de Quiros*, I., 358. This day was seen an island about six leagues in circuit; and because thus far we had encountered neither land nor shoal, nor other thing which might impede our way, we bestowed the name *Good Voyage*. Its latitude is three and a half degrees North. It was determined not to land as it was not convenient and there was risk of reefs.

**Buena Vista**, or Vatilau of the Solomon islands, is 1050 ft. high.  $8^{\circ} 53' 30'' S.$ ,  $159^{\circ} 59' 30'' E.$  II.

**Bugomaki**, one of the Brumer group, 220 ft. high.

Bugotu, the native name (of a part) of Ysabel, Solomon islands.

**Buhi**, islet on northwest extreme of the Tongan group, on the same reef with Ofolanka.

**Bukalau**, low islet of Fiji. East point,  $16^{\circ} 12' 20'' S.$ ,  $179^{\circ} 45' 50'' E.$

**Bulia**, see Mbulia in the Kandavu group, Fiji.

**Bull**, islet of St. Andrew group, Admiralty islands.

**Bultig**, or Hump islet, in Geelvink bay, New Guinea; 10-12 m.  $\times$  4 m.

**Bunatik**, islet on the southeast coast of Ponapé, Caroline islands.

**Buninga**, southwesternmost island of the Shepherd group, New Hebrides. Three-quarters of a mile NE-SW. 723 ft. high. A hundred inhabitants, all Christian.

**Bunker**, another name of Jarvis.

**Bunkey**, see Namonuito of the Caroline islands. 4.

**Buraku**, or Murray, an uninhabited volcanic peak, 1000 ft. high, northwest from Guadalcanar, Solomon islands.  $8^{\circ} 59' S.$ ,  $158^{\circ} 35' E.$

**Buriwadi**, islet of the Kiriwina or Trobriand group.  $8^{\circ} 32' S.$ ,  $150^{\circ} 52' E.$

**Burke**, islet on the coast of New Guinea.  $10^{\circ} 10' S.$ ,  $142^{\circ} 30' E.$

**Burnett**, see Noina of the Louisiade archipelago.

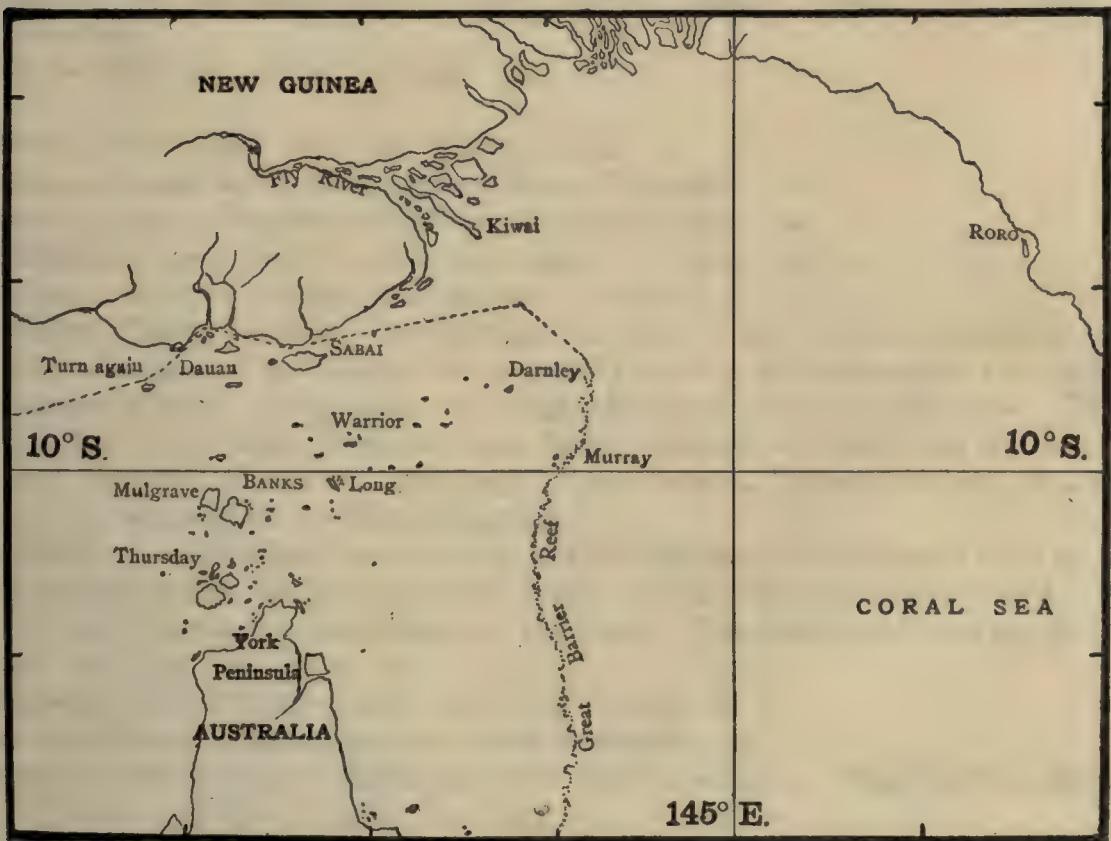

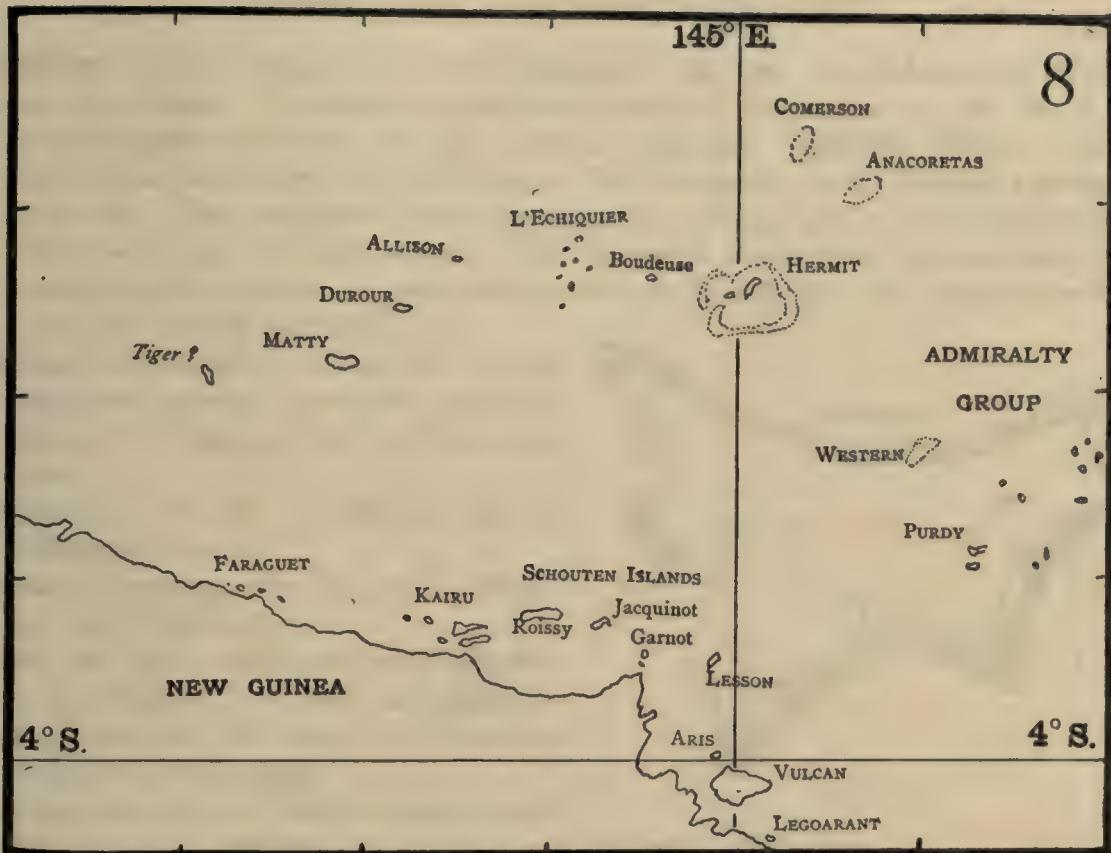

**Burrar**, or Bet, of the Three Sisters (Bet, Sue, Poll) in Torres strait.  $10^{\circ} 10' S.$ ,  $142^{\circ} 50' E.$

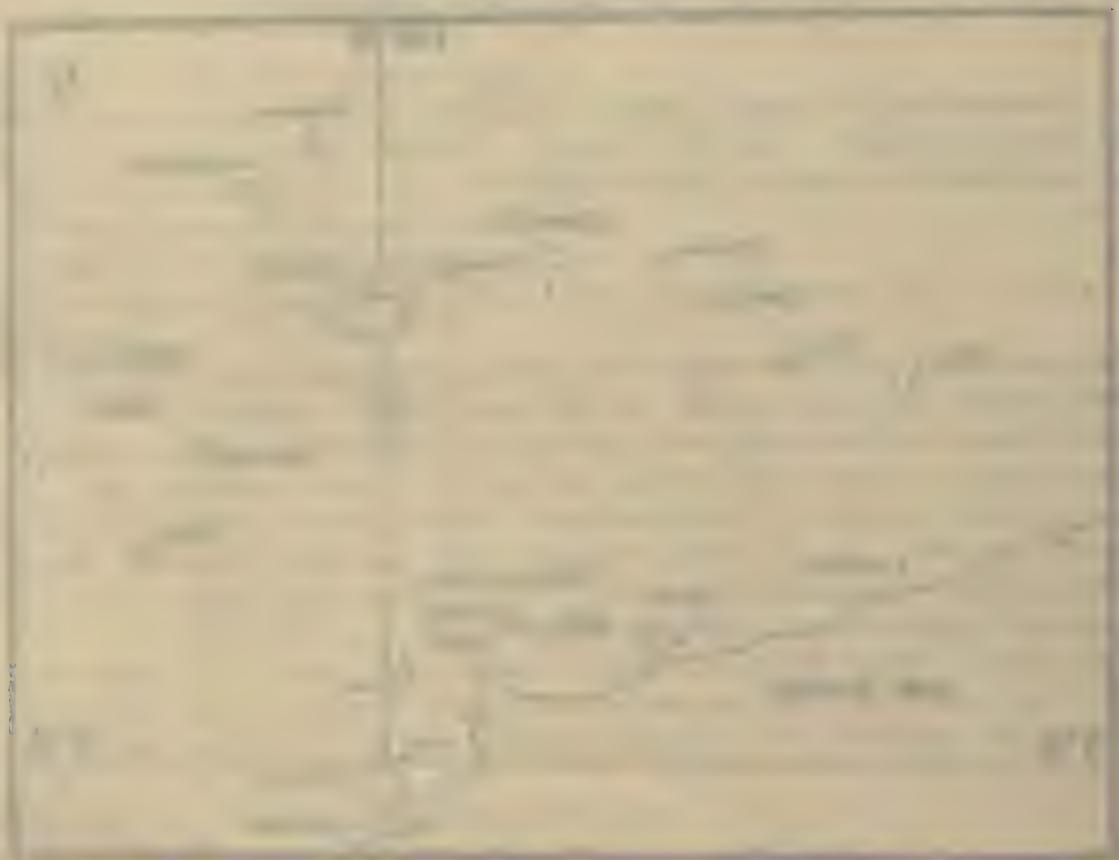

**Burrh**, islet at the entrance of Port Rhin on Lukunor, Marshall islands.  $6^{\circ} 14' N.$ ,  $171^{\circ} 46' E.$

**Burrows** (1842), see Maré, Loyalty group.

**Burwan**, inhabited islet in Malo pass, off Espiritu Santo, New Hebrides.

**Bushy**, islet off Australian coast.  $10^{\circ} S.$ ,  $142^{\circ} 58' E.$

**Butaritari** or Touching in the Gilbert group, is an atoll of triangular form, about 14 m. on a side. As shown in the figure, most of the land is on the south side of the lagoon and there are the principal villages. Namaka, Nakudi, Pikhhat, Ourik and Napuni are the main islets. The entrances to the lagoon are on the west side. The northwest point is in  $3^{\circ} 14' N.$ ,  $172^{\circ} 39' 50'' E.$  In 1886 the population was 3000, all protestants. The American Board has a station here. The south side is a continuous grove of coconut and pandanus, and a large amount of copra is exported annually. 7.

**Butchart**, or Dekatua, is an islet of the Engineer group, Louisiade archipelago, 350 ft. high, covered with coconut trees.

**Button** is a low islet in Shallow bay of Admiralty island.

**Button**, a grassy islet in China strait.  
 $10^{\circ} 34' S.$ ,  $150^{\circ} 44' E.$

**Caroline Islands** extend from the Pelew group to Ualan, and from  $2^{\circ}$  to  $12^{\circ}$  N., and with the Marshall and Gilbert groups are comprised in that portion of the Pacific usually called Micronesia. The name comes from that given by the Spanish Admiral Don Francisco Lezcano to a large island in the group not now identified. Duperrey and Lütke made the group known geographically, and to Dr. Luther Halsey Gulick, an American missionary, we are indebted for much information on both islands and inhabitants. The earliest account is by a Jesuit missionary, Juan Antonio Cantova, who visited portions of the group in 1721 and was killed at Mogmog ten years later. There are perhaps 877 square miles distributed over nearly fifty groups, most of them atolls. The table will show the distribution

more clearly, but the population there given is only approximate. In 1885 the German gunboat *Illyris* took Yap, which Spain at once claimed and her claim was sustained by the Pope, acting as arbitrator. After the war with the United States, and the loss of Guam and the Philippines, Spain sold the entire group to Germany for \$4,000,000.

**Caroline**, or Thornton, a group of low coral islands on one reef 7 m. long, 1 m. wide. Taken by England July 9, 1868.  $10^{\circ} 0' 01''$  S.,  $150^{\circ} 14' 30''$  W.

**Chatham**, a group belonging to New Zealand and situated in  $43^{\circ} 48' 59''$  S.,  $176^{\circ} 39' 50''$  W.

It was discovered by Captain Broughton of the armed tender *Chatham* attached to Vancouver's expedition in 1791. At the time of the discovery there were some 1200 natives of a race resembling the Maori and called Moriori. They were a cheerful and healthy people dressed in seal skins, but when, in 1840, Dr. Dieffenbach

visited the group, only 90 survived. In 1830 there had been an importation of 800 Maoris, and the present population is a very motley one. The largest island, Chatham or Warekauri, extends on the north coast 31 m., on the south about half that distance. Pitt or Rangihauta is 11 m. from Chatham and 8 m. long. A mile off the southeast end of Pitt is Rangatira or Southeast, and still farther to the southeast is Tarakoikoia or the Pyramid, a bare rock 566 ft. high. In 1868 this group was surveyed by the New Zealand Surveyor General, S. Percy Smith. Both the geological formation and the flora connect the Chatham islands with New Zealand.

**Fangawa**, westernmost islet of Nukulaelae, Ellice group.  $9^{\circ} 22' S.$ ,  $179^{\circ} 50' E.$  **16.**

**Fanning** was discovered in 1798 by Captain Edmund Fanning, an American, in the ship *Betsy*. Annexed by England March 15, 1888; 9.5 m. NW-SE., 27 m. in circumference; very fertile; English harbor on the west side is within an opening to the lagoon, and the principal houses are south of this.  $3^{\circ} 51' 25'' N.$ ,  $159^{\circ} 22' W.$

**Fanuatapu**, high, rocky islet, east coast of Upolu, Samoan islands.

**Fanuatapu**, inhabited islet on the southwest side of Nui, Paumotu archipelago.

**Fanup**, islet of Ruk lagoon, Caroline archipelago.

**Fanupenges**, islet of Ruk lagoon, Caroline archipelago, 3 m. east from Tol.

**Faore** is the second in size of the Stewart islands at the northwest end of the reef.

**Fapula**, islet on the east coast of Ysabel, Solomon islands.  $8^{\circ} 19' S.$ ,  $159^{\circ} 42' E.$  **II.**

**Fara**, islet on the east coast of Ysabel, Solomon islands.  $8^{\circ} 09' S.$ ,  $159^{\circ} 35' E.$  **II.**

**Faraguet**, a low, wooded islet of Sans Souci group, New Guinea.  $3^{\circ} 08' S.$ ,  $142^{\circ} 24' E.$

**Farailes**, islet of Wolea, Caroline archipelago.

**Farallon de Medinilla** or Bird Island, of the Marianas. Volcanic, 2 m. NE-SW., 50 ft. high.  $16^{\circ} 30' N.$ ,  $146^{\circ} E.$  See map of Marianas under that name. Farallon is the common Spanish term for an isolated high rock.

**Farallon de Pájaros**, in the Marianas, is an active volcano 1039 ft. high; in eruption in 1877. Discovered by Douglas Sept. 12, 1789; 1.2 m. in diameter.  $20^{\circ} 36' N.$ ,  $144^{\circ} 55' E.$

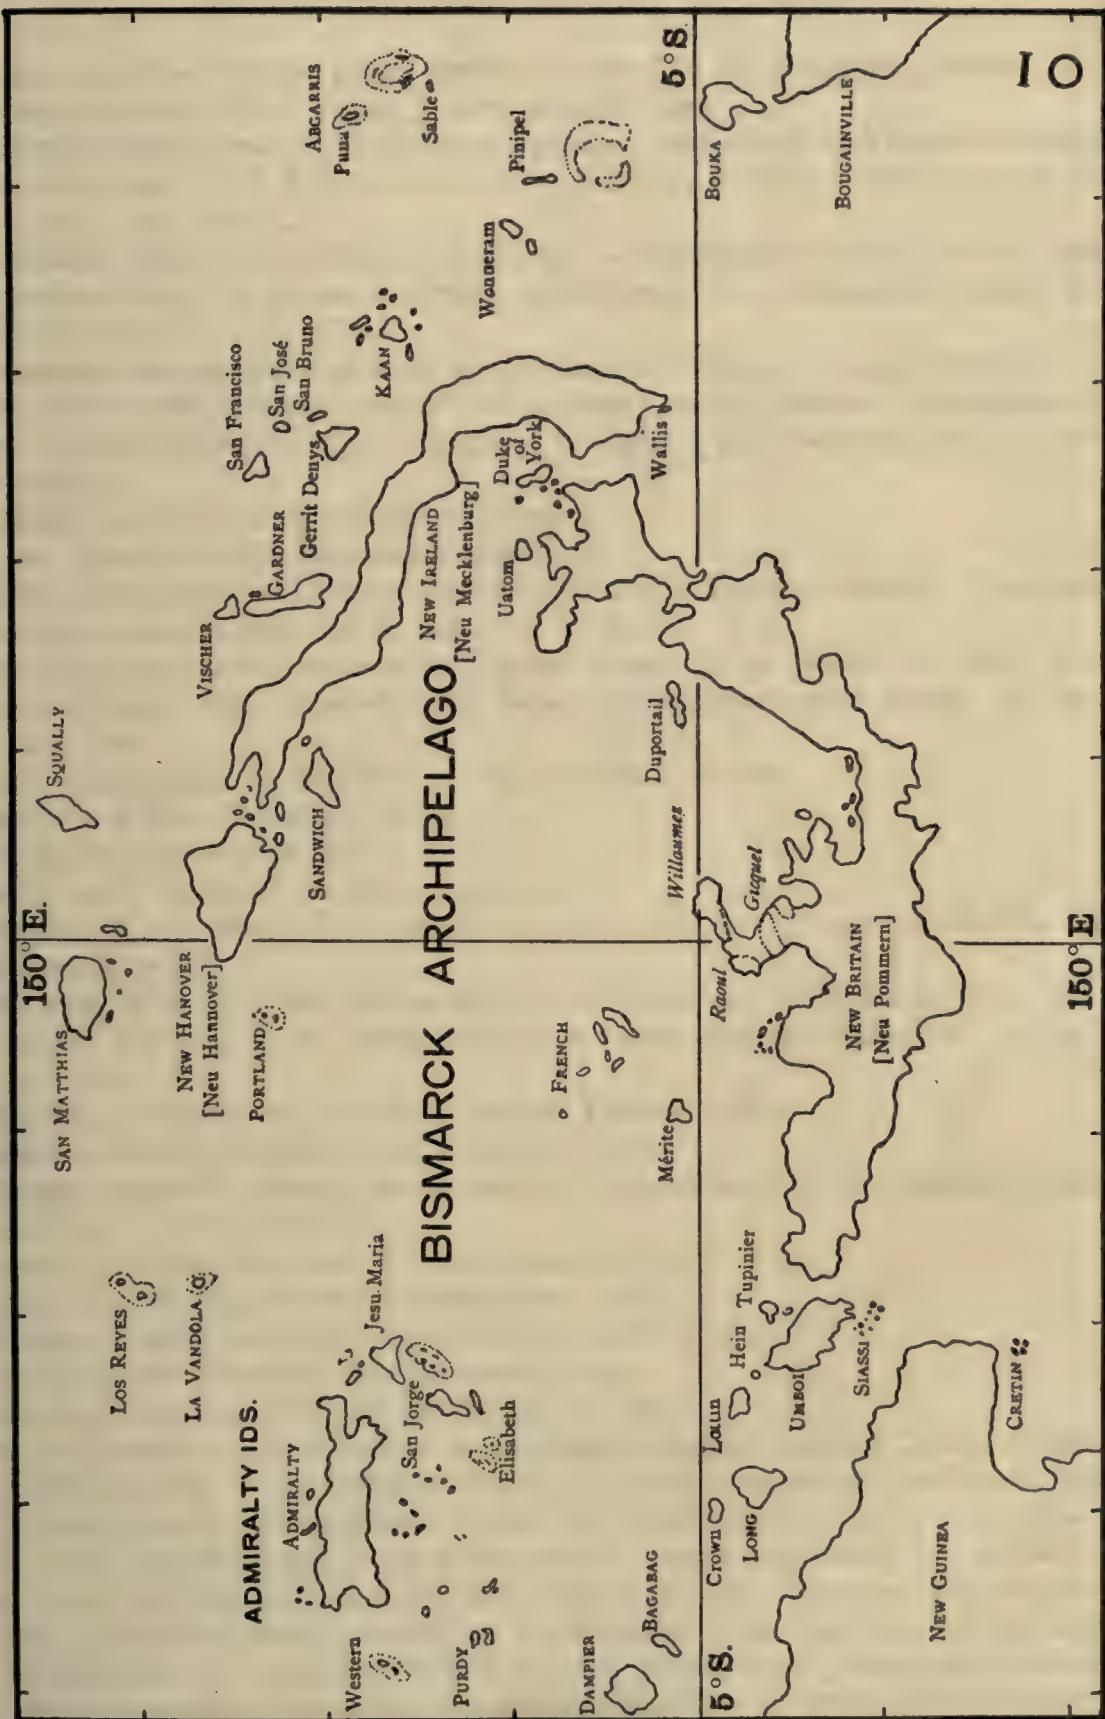

**Farallon de Torres**, in the Marianas. Formerly pinnacled rocks, but now reduced by the action of the waves or volcanic forces to rocks awash. Named for a former governor of Guam.  $16^{\circ} 51' N.$ ,  $145^{\circ} 50' E.$

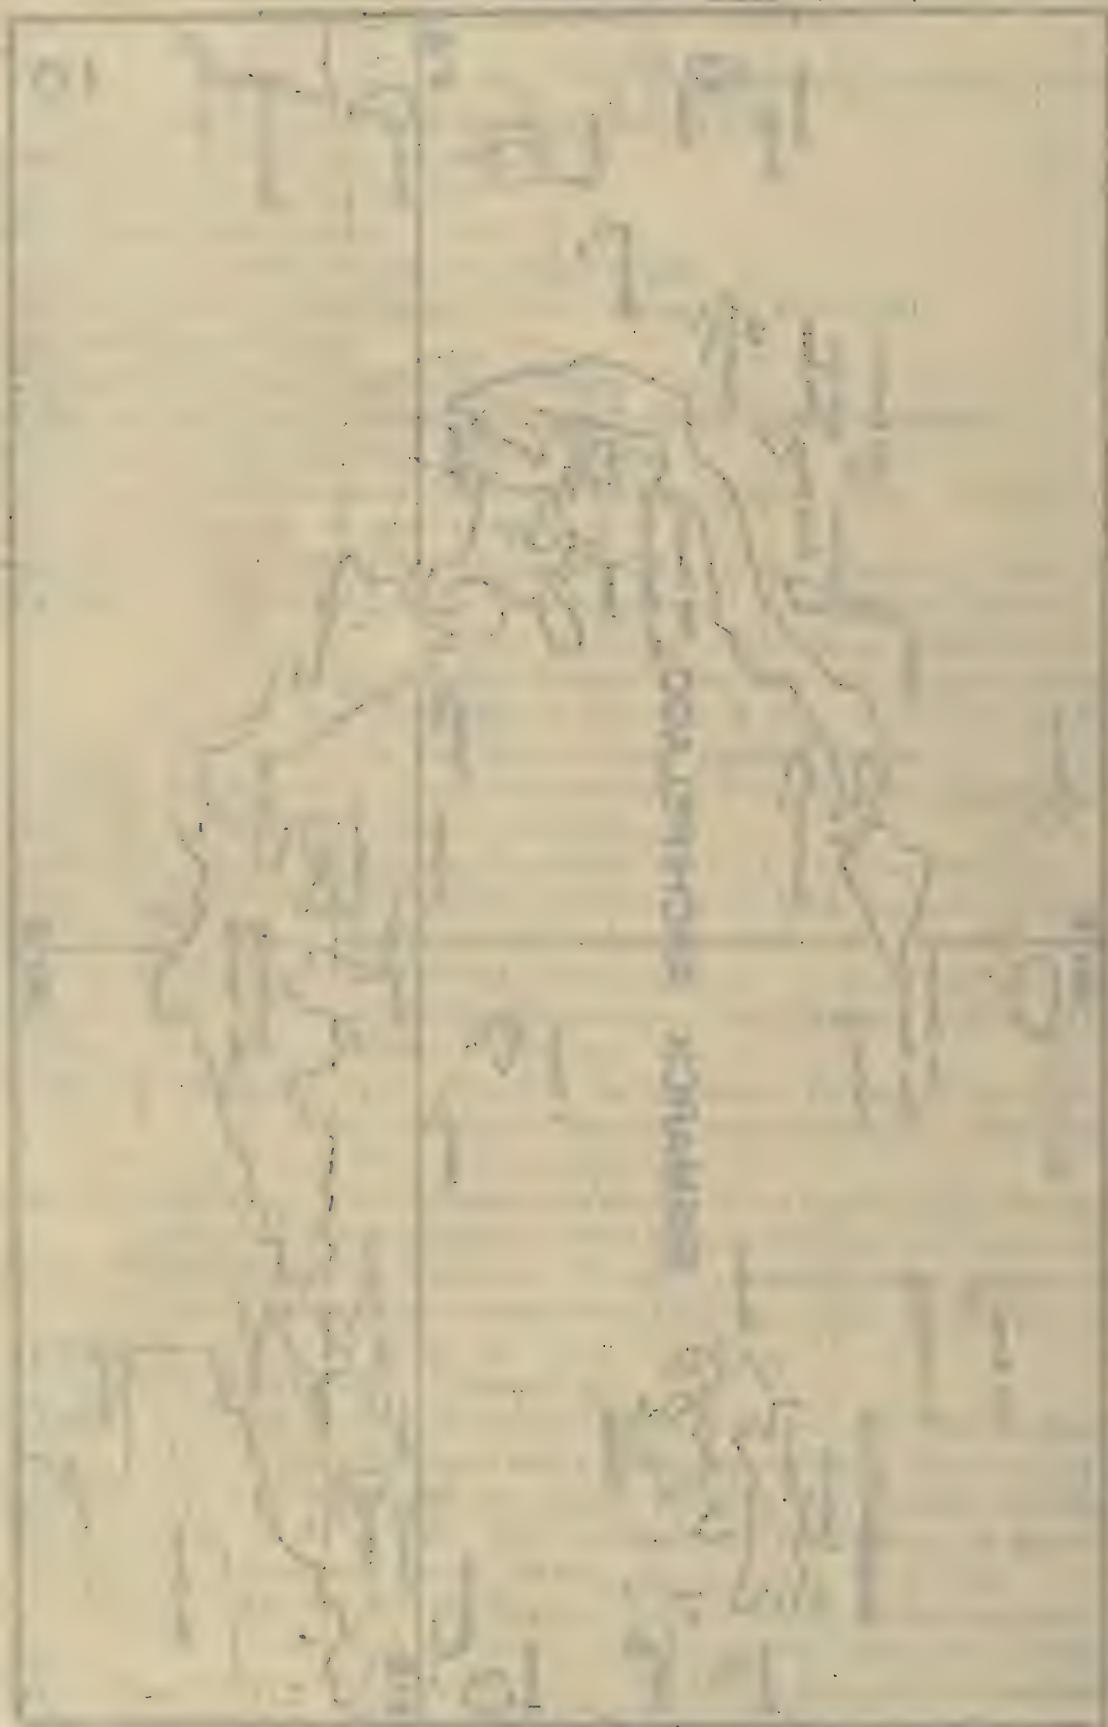

**Fararik**, islet of Ifalik, Caroline islands. **3.**

**Faraulep** or Gardner, of the Caroline islands, was discovered by Lütke, March 28, 1818. There are three islets on a reef 4 m. in circumference.  $8^{\circ} 36' N.$ ,  $144^{\circ} 36' E.$

**Fatáka**, or Mitre, was discovered by Captain Edwards, in 1791, while searching for the mutineers of the *Bounty*. It is uninhabited; 2 m. NW-SE. A British protectorate was proclaimed October 1, 1898.  $11^{\circ} 55' S.$ ,  $170^{\circ} 10' E.$  **12.**

**Faté**, the correct form of Vaté or Sandwich, as v does not occur in the alphabet of that island. Also called Efaté and Efat. Is considered the finest island of the New Hebrides; 20 m. E-W.  $17^{\circ} 40' S.$ ,  $168^{\circ} 20' E.$  The natives have more Polynesian blood than their neighbors, and there are many Samoan words in their language. **12.**

**Fatuba**, one of the Pleiades group, northwest from Uea of the Loyalty islands.

**Fatufatu**, a rocky islet of Tahaa, Society islands. **20.**

**Fatuhiva** or Magdalena of the Marquesas group. Discovered by Alvaro de Mendaña, July 21, 1595. It is 8 m. n-s., 4 m. e-w., and 3675 ft. high. The west end is in  $10^{\circ} 24' S.$ ,  $138^{\circ} 40' W.$

**Fatuhuku** or Hood of the Marquesas group. An uninhabited island, 1180 ft. high; discovered in 1774 by one of Cook's midshipmen who afterwards became Lord Hood.  $9^{\circ} 26' S.$ ,  $138^{\circ} 56' W.$

**Fatumanga**, the southwesternmost islet of the Vavau group, Tongan islands.

**Fauna**, islet in the northeast part of Ruk lagoon, Caroline islands. Population, 150.

**Fauro**, volcanic island 11 m. n-s., and 1925 ft. high, in the Solomon group.  $6^{\circ} 56' S.$ ,  $156^{\circ} 04' E.$

**Fawsawn**, islet of Ruk, Caroline archipelago.

**Fead**, see Abgarris in the Bismarck archipelago.

**Fedarb**, a group of three thickly wooded islets in the Admiralty islands. The eastern one has a conical peak 250 ft. high.  $2^{\circ} 22' S.$ ,  $147^{\circ} 26' E.$

**Fearn**, or Hunter, was discovered by Captain Fearn in the *Hunter* in 1798. It is a volcano 974 ft. high, wooded on the slopes; sulphurous vapors escape.  $22^{\circ} 24' S.$ ,  $172^{\circ} 05' E.$

**Federal**, or Ingraham, is Nukuhiva of the Marquesas islands.

**Fefau**, islet of Ruk, Caroline islands.

**Fenuafu**, islet of Uvea or Wallis.

**Fenua iti**, see Takutea of the Hervey group.

**Fenualoa**, of the Santa Cruz group, is 4.5 m. n-s. by 0.7 m.; 100-200 ft. high. Extensive reefs.

**Fenua ura**, or Scilly of the Society group, was discovered by Wallis in 1767. It is a circular reef 6-7 m. in diameter with a closed lagoon; inhabited.  $16^{\circ} 31' S.$ ,  $154^{\circ} 43' W.$

**Fenua ino**, a wooded islet of Tahiti opposite Tomotai valley.

**Ferguson**, islet in Shallow bay of Admiralty island.

**Ferguson**, island in Marau sound east of Guadalcanar of the Solomon islands.  $9^{\circ} 50' 30'' S.$ ,  $160^{\circ} 48' 45'' E.$

Fergusson, see Moratau of the D'Entrecasteaux group.

Ferneaux, see Marutea, Paumotu archipelago. **22.**

Fetohougo, a spelling of Fatuhuku of the Marquesas group.

Fetouhouhou, see Hatutu of the Marquesas group.

Fetuku, see Fatuhuku of the Marquesas group. **23.**

**Feys**, or Tromelin of the Caroline archipelago, was discovered by Captain Tromelin in 1828. 2.6 m. in circumference and 30 ft. high; of coral rock, but has no lagoon or fringing reef. When discovered had 300 inhabitants.  $9^{\circ} 46' N.$ ,  $140^{\circ} 35' E.$  **3.**

**Fiji** or Viti. An important group of the central Pacific comprising 155 islands, 100 of which are inhabited, as many more islets and reefs. The total area is not less than 7500 square miles, extending in longitude from  $175^{\circ} E.$  to  $177^{\circ} W.$ , and in latitude from  $15^{\circ} S.$  to  $22^{\circ} S.$  The formation is both coral and volcanic, although there are no active volcanoes. Coral formations may be studied here to great ad-

vantage. The highest peak rises to a height of 5000 ft. In 1889 the population, including Rotuma, was 124,010, of which 122,012 were native Fijians. These are a fine race, all nominally Christian, although within the memory of man, cannibals. The language is a branch of the same stock whence the Polynesian languages have been derived, and is not difficult to acquire by English-speaking people. As the consonants have a different pronunciation from that of the English language the printed page seems far more remote from the Polynesian dialects than it really is. The names of islands, for example, spelled in the form adopted by the missionaries are quite different from the colloquial. The pronunciation is as follows: *b* = *mb*, *c* = *th*, *d* = *nd*, *g* = *ng*, *q* = *nq* or *ngg*, *p* = *v*, *vu* = *b*. The vowels nearly as in Italian. Dialects occur in several parts of the group, but not at all to the extent found in the islands of the western Pacific. The group was discovered by Tasman February 6, 1643, and by him named Prince William Islands. D'Urville made the first chart of the group, and in 1840 Wilkes spent six months surveying the entire archipelago. In 1875 (September 1) Fiji was formally proclaimed a British colony. Thakombau, like Kamehameha on Hawaii, brought some order out of the devastating civil wars between petty chiefs, and during the last years of his life his supremacy was fully recognized by all the other chiefs. After the annexation the seat of the colonial government was at Levuka on Ovalau, but since 1882 this has been transferred to Suva on Viti levu. The foreign government seems wisely administered and is acceptable to the natives. In February and March the rainfall reaches its maximum. During the hot months, from December to April, cyclones often of great severity occur. The temperature in the shade during the hot season ranges from 66° to 88°. From April to November, the fine weather season, the average daily temperature in the shade is about 78°. In 1876 the rainfall for the year at Levuka was 108.05 inches; rain fell on 162 days, the greatest fall for one day being 5.6 inches. Products of the group are copra, sugar, cotton, fruit, peanuts, fibre and pearl shell. Fiji is the form of the name in the windward portion of the group, Viti in the leeward. Among the best books to be consulted for information on Fiji are *Narrative of the United States Exploring Expedition 1838-1842*, by Wilkes; *Fiji and the Fijians, 1858*, by Rev. Thomas Williams; *A Mission to Viti*, by B. Seemann; *King and People of Fiji*, by Waterhouse.

**Fila**, a raised coral and wooded islet on the southwest side of Faté, New Hebrides. Firth, apparently a misprint for Frith. See Ilamu of the D'Entrecasteaux group.

**Fischel**, islet in Astrolabe bay on the north coast of New Guinea.

**Fischer**, see Visschers of the Bismarck archipelago.

**Fishermen**, a low, sandy group off the coast of Motu, surrounded by reef. So named because the canoe which came off to the *Bramble* had long seines fitted like English nets. Natives of a dark copper color and numerous. 9° 30' S., 147° 02' E.

**Fitz**, island 100 ft. high off the coast of New Britain. 4° 52' S., 150° 31' E.

**Fitzroy**, island off Cape Grafton, Australia. 16° 56' S., 146° 02' E.

**Flat**, islet of the Haszard group, New Guinea.

**Flat**, see Hemenahai of the Louisiade archipelago.

**Flat**, islet on the south coast of Huapu of the Marquesas islands.

**Fliegen**, on the New Guinea coast.  $7^{\circ} 20' S.$ ,  $147^{\circ} 23' E.$

**Flinders**, or Great, on the north side of Banks strait, 2550 ft. high.

**Flinders**, group on the Australian coast.  $14^{\circ} 11' S.$ ,  $144^{\circ} 17' E.$  Named for Captain Matthew Flinders.

**Flint**, a low, guano, uninhabited island belonging to Great Britain. It was discovered in 1801. 2.5 m. long, and 0.5 m. wide.  $11^{\circ} 25' 43'' S.$ ,  $151^{\circ} 48' W.$   $\odot$

**Florida**, one of the Solomon group. The name was given by the discoverer, Mendaña. The native name is said to be Ngela, but others declare this is only the name of a district. It is 1500 ft. high and populous. There are several stations of the Melanesian mission on the coast.  $9^{\circ} 02' S.$ ,  $160^{\circ} 20' E.$

**Fly**, islet on the northeast coast of Faté, New Hebrides; low, covered with trees.

**Fly**, two islets off Death Adder bay on the northeast coast of New Guinea.

**Folger**, one of the Magellan islands whose existence is doubtful.

**Follenius**, islet on the north coast of New Guinea.

**Fonuafala**, see Fakaafao.  $9^{\circ} 22' S.$ ,  $171^{\circ} 17' W.$

**Fonualei**, Amargura or Gardner of the Tongan group, in  $18^{\circ} 02' S.$ ,  $174^{\circ} 24' W.$ , was destroyed by an eruption in August, 1847. Ashes were thrown in large quantities on passing ships 500-600 m. to the northeast.

**Fonualoa**, see Fakaafao.  $9^{\circ} 27' S.$ ,  $171^{\circ} 14' W.$

**Fonualoa**, Tongan group.

**Forbes**, group on the Australian coast.  $12^{\circ} 18' S.$ ,  $143^{\circ} 24' E.$

**Forfano**, see San Alessandro, Volcano islands.

**Forsyth**, one of the Wellesley group in the gulf of Carpentaria.

**Fortuna**, 360 m. northeast of Fiji. Same as Fotuna below.

**Fotuhaa**, islet of the Tongan group.

**Fotuna**, with Alofa the Horne islands. 8.2 m. by 5.2 m. Mt. Schouten is 2500 ft. high.  $10^{\circ} 14' 15'' S.$ ,  $178^{\circ} 10' W.$  **18.**

**Four Crowns**, see Anuanurunga of the Paumotu archipelago. **21.**

**Four Facardins**, see Vahitahi, Paumotu archipelago.

**Fox**, island 2 m. long, near Naviti in the Yasawa group, Fiji.  $17^{\circ} 11' S.$ ,  $177^{\circ} 09' 30'' E.$

**Fox**, see Rénard of the Louisiade archipelago.

**Francis**, see Peru of the Gilbert islands. **7.**

**Frankland**, group on the coast of Australia.  $17^{\circ} 15' S.$ ,  $146^{\circ} 15' E.$

**Franklin** (of Ingraham), see Motuiti, Marquesas islands.

**Fraser**, or Great Sandy, on the east coast of Queensland.  $24^{\circ} 42' S.$ ,  $153^{\circ} 11' E.$   
North end.

**Frazer**, see Andema of the Carolines.

**Freemantle** (of Roberts), see Eiao, Marquesas islands.

**Freewill**, see Pegan.  $0^{\circ} 57' N.$ ,  $134^{\circ} 21' E.$

**French**, islet in Laurie harbor, Enderby island.

**French**, group discovered by D'Entrecasteaux and named Iles Françaises. They are all high and adjacent to New Britain. **10.**

**French Frigates**, of the Hawaiian group, was discovered by La Pérouse November 6, 1786. He gave the name Basse des Frégates Françaises. It is usual to make the mistake in translating to print in the singular, but the name was given for

the two frigates of the expedition. A picturesque rock, very difficult of ascent, rises 120 ft. from the lagoon, and around are reefs and sand banks. Coarse grass and some small shrubs compose the vegetation. The lagoon and outer shores abound in sharks.  $23^{\circ} 46' 30''$  N.,  $166^{\circ} 16'$  W. **2.**

**Freycinet**, in Dumbea passage, New Caledonia. Round, moderately high, wooded.

**Friday**, north from Prince of Wales in Torres strait.  $10^{\circ} 35'$  S.,  $142^{\circ} 09'$  E.

**Friendly**, the name given by Cook to the Tongan group.

**Frith**, in the southwest part of Moresby strait, D'Entrecasteaux group. 2 m. E-W., 1.2 m. N-S.; 500± ft. high; many inhabitants. Wallaby abound.

**Fua**, islet of Hapai, Tongan islands.

**Fulanga**, Fiji group. The west bluff is 150 ft. high. Inhabited. Fine timber.  $19^{\circ} 04' 30''$  S.,  $181^{\circ} 19' 40''$  E. East end.

**Fulatutasi**, islet of Fakafo or Bowditch.  $9^{\circ} 24'$  S.,  $171^{\circ} 13'$  W.

**Funafana**, southernmost island of the Ellice islands.

**Funafuti**, or Ellice, was discovered by Captain de Peyster March 18, 1819. A lagoon atoll 13 m. by 7.2 m. There are some 30 islets; principal one long but very narrow. Of recent interest as the scene of a boring into the coral reef, and of zoological investigations, which have been published by the Australian Museum.\*  $8^{\circ} 35' 50''$  S.,  $179^{\circ} 10' 40''$  E. **16.**

**Fungalei**, islet of Uvea or Wallis; about 200 ft. high.

**Furneaux**, a group in Bass strait composed of Clarke, Cape Barren and Flinders.

**Futuna**, or Erronan of the New Hebrides, is about 15 m. in circumference and 1931 ft. high. There are 900 inhabitants; of Tongan origin.

**Gabagabawa**, islet northwest from Duau, D'Entrecasteaux group.  $9^{\circ} 44'$  S.,  $150^{\circ} 53'$  E.

**Gabba**, islet on south coast of New Guinea.  $9^{\circ} 45'$  S.,  $142^{\circ} 37'$  E.

**Gadogadoa**, prominent islet, 315 ft. high, on the southeast coast of New Guinea.

**Gagan**, islet of Kwadjelin of the Marshall islands.

**Galápagos**. This group, on some accounts one of the most interesting in the Pacific region, lies on the equator some 600 miles from Ecuador, to which it belongs. It extends  $1^{\circ} 30'$  both north and south of the equator, and the centre of the group is in longitude  $90^{\circ} 30'$  W. Dampier, who visited these islands in May, 1684, gave a quaint account of their inhabitants: "The Spaniards, when they first discovered these islands, found multitudes of guanoes (iguanas) and land-turtle or tortoise, and named them the *Galapagos* (tortoise) islands. I do believe there is no place in the world that is so plentifully stored with these animals. The guanos here are fat and large as any that I ever saw; they are so tame that a man may knock down 20 in an hour's time with a club. The land-turtle are here so numerous that 500 or 600 men might subsist on them alone for several months without any other sort of provision; they are extraordinary large and fat, and so sweet that no pullet eats more pleasantly." All the early visitors speak of the abundance of this nutritious food; the buccaneers made good use of it, and in 1813 Porter, near

\*Taking this island as a typical Central Pacific atoll, we may note the fauna as given by Hedley in the Memoirs of the Australian Museum, III. 1897. No other portion of this Central Pacific fauna has been so well studied. It is composed of 2 Mammals, 15 Birds, 5 Reptiles, 72 Fishes, 2 Enteropneusts, 87 Crustaceans, 27 Arachnids, 5 Myriopods, 42 Insects, 440 Molluses, 1 Brachiopod, 28 Echinoderms, 5 Annelids, 12 Gephyrean worms, 16 Sponges, 5 Hydrozoa, 2 Scyphozoa, and 120 Actinozoa.

a bay on the northeast part of James island, took on board about 500 individuals, or nearly 14 tons: *Journal of a Cruise made to the Pacific Ocean*, New York, 1822, 2 vols. 8vo. The tortoise are now nearly extinct, and some species (there are distinct ones on different islands) have wholly disappeared. See *Catalogue of the gigantic Land Tortoises in the British Museum*, by Günther, London, 1877. There are six principal islands, nine islets, and many mere rocks. All are volcanic, and Darwin (*Volcanic Islands*) estimated the number of extinct craters at 2000. The largest island, Albemarle, is  $60 \times 15$  m., and 4700 ft. high. The other islands are Narborough, Culpepper, Wenman, Abingdon, Bindloe, Tower, James, Jarvis, Duncan, Indefatigable, Barrington, Charles, Hood and Chatham. See *Proceedings of the Royal Geographical Society*, 1880, pp. 742-755.

**Galera** (La), discovered April, 1568, by Pedro de Ortega Valencia and Hernan Gallego of Mendaña's expedition. Solomon islands.

**Galoa**, see Ngaloa, Fiji.

**Gambier**, see Mangareva in the Paumotu archipelago. Discovered by Captain Wilson in the *Duff* and named for Admiral Lord Gambier. 22.

**Ganges**, nothing certain known of this island or reef reported in  $39^{\circ} 47' N.$ ,  $154^{\circ} 15' E.$  **Gannet**, see Karewha, New Zealand.

**Garahi**, islet of Sariba, southeast coast of New Guinea; 355 ft. high.

**Garden**, see Iyin of the Louisiade archipelago.

**Gardenijs** was named by Tasman for a member of Council for India. Tasman calls it Gerrit de Nijs and Gardenys on the same page of his journal (p. 42 of translation), 1643. About 20 m. off the northeast coast of New Ireland;  $1600 \pm$  ft. high. The north end is in  $3^{\circ} 04' S.$ ,  $152^{\circ} 38' E.$

**Gardner**, of the Bismarck archipelago, is about 29 m. WNW. from Gardenijs, and more than 1600 ft. high. The north point is in  $2^{\circ} 45' S.$ ,  $151^{\circ} 55' E.$

**Gardner**, see Faraulep of the Caroline archipelago.

**Gardner**, of the Hawaiian group, is a rock 200 yards in diameter, and 170 ft. high. It was discovered by the captain of the American whaler *Malo*, June 2, 1820.  $25^{\circ} 00' 40'' N.$ ,  $167^{\circ} 59' 05'' W.$

**Gardner**, or Kemins, is the southwestern island of the Phœnix group.  $4^{\circ} 37' 42'' S.$ ,  $174^{\circ} 40' 18'' W.$   $\odot$

**Gardner**, see Fonualei, Tongan islands.

**Garnot**, a volcanic cone in the Schouten group on the north coast of New Guinea.  $3^{\circ} 31' S.$ ,  $144^{\circ} 34' E.$

**Garrick**, on the New Guinea coast.  $7^{\circ} 48' S.$ ,  $144^{\circ} 52' E.$

**Gaspar Rico**, a name of Taongi, Marshall islands.

**Gau**, see Ngau, Fiji.

**Gaua**, Gog or Santa Maria of the Banks group, is 10 m. in diameter and 2200 ft. high. It has about 2000 inhabitants.  $14^{\circ} 15' S.$ ,  $167^{\circ} 28' E.$

**Gaudichaud**, islet of Ruk, Caroline islands.  $7^{\circ} 32' 35'' N.$ ,  $150^{\circ} 59' 32'' E.$

**Gavotu**, islet of Solomon islands.

**Gawa**, an island of curious structure in the Trobriand group. It is 2 m. in diameter, and a coral wall rises 400 ft., within which is a plateau 100 ft. lower. Population,  $500 \pm$ .  $8^{\circ} 30' S.$ ,  $151^{\circ} E.$

## INDEX TO THE PACIFIC ISLANDS.

Gela, see Florida, Solomon islands.

**Geloon**, or Gelun, one of the Hermit islands. Inhabited.  $1^{\circ} 32' S.$ ,  $145^{\circ} E.$

**Gente Hermosa**, or Swain, was discovered by Quirós March 2, 1606, and by him named La Peregrina. Espinosa called it Isla de Gente Hermosa, from the beauty of the inhabitants. It is 7-8 m. in circumference, and 15-25 ft. above the sea; lagoon closed. At the time of the Wilkes expedition it was well wooded, but now the island is occupied by an American, Jennings, who has 800 acres planted with coconuts.  $11^{\circ} 05' S.$ ,  $170^{\circ} 55' 15'' W.$  **15.**

Georgian, name given by Cook to Tahiti and the southeast group; the northwest he called Society, for the Royal Society.

**Gera**, inhabited islet off the northeast coast of Guadalcanar, Solomon islands.

**Gero**, islet in Uarai bay, southwest side of New Caledonia.

Gerrit Denys, see Gardenijs of the Bismarck archipelago.

**Gesira**, islet 220 ft. high on the southeast coast of New Guinea.

Gibbons, see Daiwari of the Louisiade archipelago.

Gicquel, a volcanic island on the north side of New Britain. Found by late surveys to be a portion of the main island. West end,  $4^{\circ} 57' S.$ ,  $149^{\circ} 52' E.$  Named for one of the pilots of the *Recherche*. **10.**

**Gie** or Pine islet off Isle of Pines. **13.**

**Gigila**, islet 420 ft. high, wooded; connected with Abaga gaheia by reef on the southeast. Louisiade archipelago.

**Gikuo**, islet of Ontong Java.  $5^{\circ} 19' S.$ ,  $159^{\circ} 46' E.$  **II.**

**Gilbert**, islet, low and wooded, near Schouten islands on the north coast of New Guinea.

Gilbert, see Maiana of the Gilbert islands. **7.**

Guam or Guajan of the Marianas or Ladrones. On this island, in 1668, the Spaniards founded a mission under the direction of Padre de Sanvitores who declares that during the first year he baptized 13,000 people and converted 20,000. His conversions were so very thorough that when Dampier visited the islands in 1686 there were but 400 alive! Kotzebue, in 1817, found a single couple of the indigenes surviving. The population in 1873 amounted to about 7000, imported from the Philippines and the Carolines. Guam is 29 m. long. As a result of the

**Hawaii**, the largest of the Hawaiian group, was called by Cook Owhyhee, misunderstanding the article O Hawaii. The island is wholly volcanic, composed of lava emitted from Kea, Loa, Hualalai and Kilauea. Of these volcanoes Kea has attained the height of 13,825 ft.; Loa, 13,675 ft.; and Hualalai, 8275. The area of the island is 4015 sq. m. While a large part of the surface is barren lava, along the shores and in the valleys on the north and east sides much sugar is produced, and on the west side the best coffee of the group is found.

**Hawaiian Group.** Called by Cook Sandwich islands in honor of his patron the Earl of Sandwich, a cordial hater of Americans. The group was discovered by the Spaniard Juan de Gaetano in 1555, and again by Cook January 18, 1778. They were annexed to the United States July 7, 1898.\* The group consists of eight principal islands and a long range of uninhabited rocks extending many degrees to the northwest. Perhaps more books have been written about the Hawaiian islands than about any other group in the Pacific. The Geology has been published by Dana, the present writer and others; the Botany by Mann and Hillebrand; the Ornithology by Wilson, Rothschild, Dole and Bryan; the Entomology by Perkins and others; Herpetology by Stejneger. Other departments of Natural History have not been adequately studied. Historical books, apart from the Voyages, are by Dibble, Bingham, Fornander and Alexander. A grammar of the language and a dictionary were published by Andrews, and the translation of the Bible by the American missionaries preserves the Hawaiian language in its purity, while in common use it has become very corrupt. A very competent government survey, under the charge of Professor W. D. Alexander, has measured and mapped the topography. In 1898 the imports amounted to \$10,368,815.09; the exports, \$17,346,744.79; Custom House receipts, \$896,975.70.

**Mandoliana** is south from Florida, Solomon islands.  $9^{\circ} 11' 30'' S.$ ,  $160^{\circ} 15' 30'' E.$

**Manduilotu**, one of the islets of Sikaiana or Stewart island.  $8^{\circ} 23' S.$ ,  $162^{\circ} 58' E.$   $\pm$

**Manevai** or **Direction**, islet of Vanikoro, New Hebrides; small, 250 ft. high.

**Mangaia**, of the Hervey group, is 20 m. in circumference and 300 ft. above the sea. Discovered by Cook March 29, 1777. In 1885 it had a population of 4000 and is the centre of the Protestant Mission for the Central Pacific. The fringing reef has no entrance. The people were very skilful in carving paddles and handles of ceremonial adzes, as shown by the specimens in every museum.  $21^{\circ} 57' S.$ ,  $151^{\circ} 07' W.$

**Mangareva**, Peard or Gambier, a coral reef with five small volcanic islands and many islets, discovered by Captain Wilson in the *Duff* May 25, 1797. It was named for Admiral Lord Gambier. The group extends 4 m. NE-SW., and there are three passages into the lagoon. Mt. Duff is 1315 ft. high. In 1880 the population was about 1000. Mangareva, Akamaru or Wainwright, Aukena or Elson, Taravai or Belcher, Agakauitai, Makaroa or Marsh, Kamaka or Collie, Manui, Makapu. Mangareva is an important station of the Roman Catholic Mission.  $23^{\circ} 08' S.$ ,  $134^{\circ} 55' 30'' W.$  **22.**

**Mango** (Mago), Fiji, is 18 m. NNE. from Thithia,  $3 \times 2$  m., and 670 ft. high; water only from wells. It is the property of English colonists.  $17^{\circ} 27' 30'' S.$ ,  $180^{\circ} 53' 30'' E.$

**Mangorongoro**, see **Tongareva** or **Penrhyn**.

**Mangrove**, low island of Fiji.  $17^{\circ} 50' 30'' S.$ ,  $177^{\circ} 21' E.$

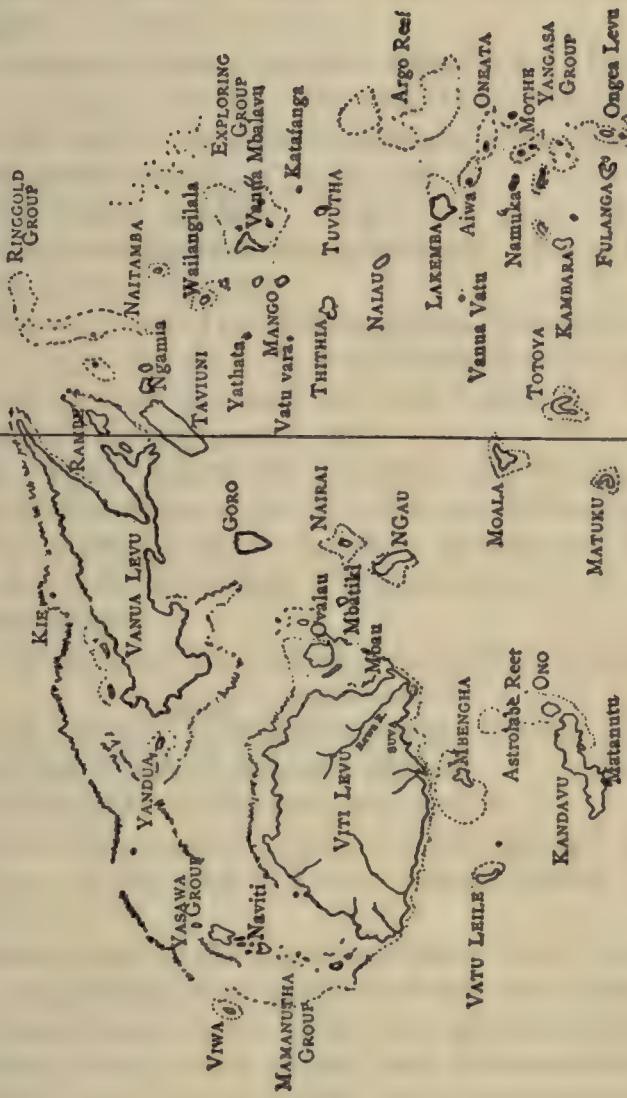

**Mangs** or **Manjas**, see **Urracas** of the Marianas.

**Manicolo**, a name of Vanikoro, New Hebrides. **12.**

**Manihi**, of the Paumotu archipelago, is the Waterlandt of Lemaire and Schouten, 1616; 13 m. NE-SW. Inhabitants make curiously elaborate canoes. The east end is in  $14^{\circ} 24' S.$ ,  $145^{\circ} 52' W.$  **21.**

**Manihiki**, see Monahiki. **19.**

**Manim**, islet of Jobi, New Guinea.

**Manima**, islet of Tongatabu.

**Manoba** or Elisabeth, a thickly wooded island off the northeast point of Malaita, Solomon islands.  $8^{\circ} 20' S.$ ,  $160^{\circ} 43' E.$

**Manono**, of the Samoan islands, is on the reef of Upolu. It has a surface of 3.3 sq. m.; 500 ft. high.  $13^{\circ} 50' S.$ ,  $172^{\circ} 01' E.$  Formerly the political centre of the feudal aristocracy; at present a sort of naval dockyard where a large double war-canoe is kept. **15.**

**Manor**, of the Schouten islands.  $0^{\circ} 50' S.$ ,  $136^{\circ} E.$

**Manose**, one of the Hermit islands.  $1^{\circ} 34' S.$ ,  $144^{\circ} 55' E.$  **8.**

**Mantapeiti** (leeward) and Mantapeitak (windward), islets of Ponapé, Caroline islands.

**Manton**, see Mokil, Caroline islands.

**Manua**, of the American part of the Samoan group, covers 20 sq. m. and rises to a height of 2500 ft.  $14^{\circ} 15' S.$ ,  $169^{\circ} 26' 30'' W.$  The traditional cradle of the Samoan race.

**Manuae**, a barren islet on the same reef with Anotu; few inhabitants. Discovered by Cook in 1773. Hervey group. **23.**

**Manuatha**, off the north coast of Viti levu, Fiji; 400 ft. high.

**Manubada**, islet off Port Moresby on the south coast of New Guinea.  $9^{\circ} 32' S.$ ,  $147^{\circ} 10' E.$

**Manuhangi** or Cumberland, of the Paumotu archipelago, was discovered by Wallis in 1767. It is low but inhabited. The west end is in  $19^{\circ} 12' S.$ ,  $141^{\circ} 19' 06'' W.$  **21.**

**Manui**, islet of Mangareva.

**Manumanu**, at the mouth of the Vanapa river in Redscar bay, New Guinea.  $9^{\circ} 09' S.$ ,  $146^{\circ} 54' E.$

**Maora**, islet on the east reef of Huaheine, Society islands.

**Maoraha**, islet of San Cristóval, Solomon islands.

**Map**, islet on northern side of Yap, Caroline islands.

**Mapas**, islet on the south coast of Murua, Kiriwina group.  $9^{\circ} 09' S.$ ,  $152^{\circ} 45' E.$

**Mapeti**, in Aifa pass on the coast of Tahiti, Society islands. **20.**

**Mapia**, see Pegan.

**Mara**, islet in Muendo bay on the southwest side of New Caledonia.

**Maragili**, a name of Kosmann islet in the Louisiade archipelago.

**Marai** with Taliwewai forms Stuers islets; low, wooded, in the Louisiade archipelago.

**Maraki** or Matthew, of the Gilbert islands, was discovered by Captains Marshall and Gilbert in 1788;  $5 \times 2.5$  m., the lagoon shores almost entirely covered with vegetation. Population was 1900 in 1886.  $2^{\circ} N.$ ,  $173^{\circ} 25' E.$  **7.**

**Maramasiki** is southeast of Malaita, Solomon islands.  $9^{\circ} 32' S.$ ,  $161^{\circ} 25' E.$   $\odot$

**Marambo**, a small, wooded island 7 m. E. by N. from the south point of Kambara, Fiji; 160 ft. high.

**Marceau**, islet in Arembo bay on the southwest side of New Caledonia.

**Marchand**, see Nukuhiva of the Marquesas islands. **23.**

**Marcken**, incorrectly on the charts as Marqueen, was named by Lemaire from a supposed resemblance to the island of that name in the Zuyder Zee. Captain Mort-

lock saw this group in 1795. It is supposed to be the Cocos of Wilkinson, 1790, and it has been called Massacre because here a crew was cut off in 1830. There are 13 low, coral islands on a reef 10 m. in diameter. The south islet is the largest and inhabited.  $4^{\circ} 45' S.$ ,  $157^{\circ} E.$

**Marcus**, barren island in  $23^{\circ} 10' N.$ ,  $154^{\circ} E.$  Seized by Japan in 1899 in anticipation of a cable station.

**Maré** or Nengone, the Britannia of Burroughs (1842), was discovered by D'Urville June 15, 1827. It is the principal island of the Loyalty group, and has a population of about 2000. The northeast point is in  $21^{\circ} 29' 30'' S.$ ,  $168^{\circ} 06' E.$

**Maretiri**, see Bass islands.

**Margaret**, an inhabited island near Sideia on the southeast coast of New Guinea; 1.5 m. E-W., 0.5 m. N-S.; 500 ft. high.  $10^{\circ} 41' S.$ ,  $150^{\circ} 54' E.$

**Margaret**, a name given to Nukutipipi by Turnbull from his ship *Margaret*.

**Margareta**, see Namo of the Marshall islands.

**Margaritana** (La), an island discovered by Quirós April 26, 1606, 12 leagues from the San Marcos of de Leza. Perhaps one of the Banks islands.  $13^{\circ} S.$

**Maria**, see Mœrenhout of the Paumotu archipelago. 22.

**Maria**, an island on the east coast of Tasmania, 2750 ft. high, was a government reserve for the last of the Tasmanians.  $42^{\circ} 40' S.$ ,  $148^{\circ} E.$

**Maria**, see Peru or Francis of the Gilbert islands. 7.

**Marianas** or Ladrone. Although Magalhães first discovered this group March 6, 1521, his name "Islas de las velas latinas" was soon superseded by that of Ladrões; and in 1668 they were officially named Marianas in honor of Maria Anna of Austria, widow of Philip IV. of Spain. The islands of the group arranged from south to north are as follows:

The primitive *Chamorros* have left memorials in remarkable stone columns on Tinian and Guam. These are, according to Lieutenant Mortimer, 5 ft. 4 in. broad at the base, 14 ft. high, and surmounted by hemispheres of stone 5 ft. 10 in. in diameter. As the group is situated at about the place where the northeast trades cease and the monsoons meet the rainfall is almost continuous, and atmospheric disturbances attain to the force of hurricanes. Earthquakes, as might be expected in a country wholly volcanic, are common though not very severe. At the present writing it is understood that Spain has sold the group to Germany since the acquisition of Guam by the United States at the end of the Spanish-American war.

**Marière** or **Pulo Marière**, also called **Warren Hastings**, was discovered by Captain Hutchinson September, 1761. It is 2 m. N-S. by 1 m. E-W., and inhabited.  $5^{\circ} 45' S.$ ,  $132^{\circ} 28' E.$

**Marina**, a name of **Espirito Santo**, New Hebrides, used by the Banks islanders. In Maewo and Oba it is called **Marino**. **Marion**, see **Tupua** of the Society islands.

**Marire**, islet of **Espirito Santo**, New Hebrides.

**Markham**, see **Bagiagia**, a reef island in Moresby strait.

**Maro** reef was discovered by Captain Allen of the American whaler *Malo* in 1820. About 35 m. in circumference; no land; breakers only. Northwest point is in  $25^{\circ} 31' N.$ ,  $170^{\circ} 37' 33'' W.$

**Marokau**, Dawhaida or Ravahere was discovered by Captain Cook in 1773. There is great uncertainty about this group, not as to its existence, but whether there are not two distinct reefs, besides the neighboring one of Manaka. I have followed the charts, but the sailing directions contradict these and there is no competent exploration to determine. North point is in  $17^{\circ} 55' S.$ ,  $142^{\circ} 17' W.$

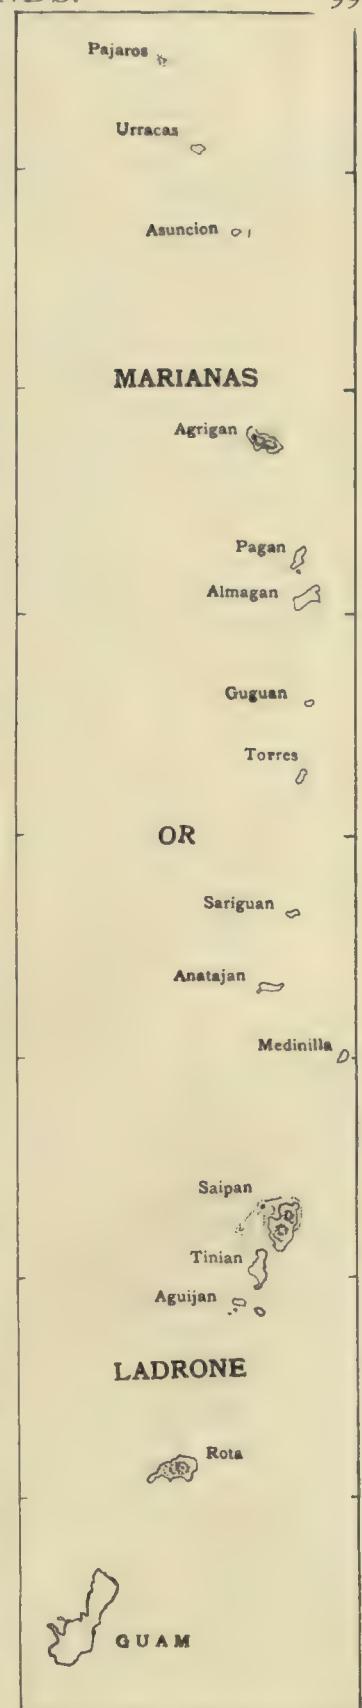

**Maronu**, islets in Uailu passage on the northeast side of New Caledonia.

**Maroupo**, a name of **Angatau** of the Paumotu archipelago.

**Marovo**, New Georgia or Rubiana, of the Solomon islands, consists of three principal islands and many islets, all of recent volcanic origin, some rising to a height of 2500 ft. Inhabitants are dark, sturdy cannibals. The northeast point is in  $7^{\circ} 57' S.$ ,  $157^{\circ} 31' E.$

Marqueen of the charts should be Marcken as named by Lemaire.

**Marquesas**, Les Marquises, were discovered July 21, 1595, by Mendaña so far as the southeast group is concerned. The northern group by Marchand in 1791, and by Ingraham about the same time. They were named in memory of Don Garcia Hurtado de Mendoza, Marqués de Cañete, Viceroy of Peru and patron of Mendaña's second voyage. They were taken by France in 1842. The native inhabitants have diminished from the supposed number of 75,000 to less than 3500. They were of beautiful form, finely tatued, and hungry cannibals. Now they are perishing with leprosy, syphilis and other evils. Devoted Hawaiian missionaries have labored with them for forty years. The islands of the group may be tabulated as follows:

**Marutea** or Lord Hood, in the Paumotu archipelago, was discovered in 1791 by Captain Edwards in H. M. S. *Pandora*. The atoll extends 11 m. E-W., and 7 m. N-S. It is uninhabited and the lagoon is closed.  $21^{\circ} 31' S.$ ,  $135^{\circ} 38' W.$  22.

**Marutea** or Furneaux, a low, inhabited atoll discovered by Cook in 1773. West end in  $16^{\circ} 54' S.$ ,  $143^{\circ} 20' W.$

Mary Balcout of Wilkes is Canton in the Phoenix group.

**Mas-a-fuera** is 92 m. west from Juan Fernandez, 8 m. N-S., 5 m. E-W., 4000 ft. high.  $33^{\circ} 46' S.$ ,  $80^{\circ} 46' W.$

**Masamasa** is 575 ft. high, in Bougainville strait, Solomon islands.  $6^{\circ} 47' S.$ ,  $156^{\circ} 09' E.$

Mas-a-tierra, a name of Juan Fernandez.

**Maskelyne**, group of low islands, thickly peopled, off the southeast coast of Malekula, New Hebrides. Sakau is the largest; others are Kolivia and Kiwyo.

**Masmapi**, islet in Dorei bay on the north coast of New Guinea.

Massachusetts of Roberts is Huahuna of the Marquesas islands.

Massacre, a name given to Marcken of Lemaire.

**Massaramcoer** or Bramble Cay, a sandbank 10 ft. high at the northeast boundary of Queensland Colony.  $9^{\circ} 07' 50'' S.$ ,  $143^{\circ} 52' 10'' E.$

Masse of Roberts is Eiao of the Marquesas islands.

**Matador**, of the Caroline islands was discovered in 1876. It consists of 15 islets on an atoll, some of them inhabited.  $1^{\circ} 30' N.$ ,  $157^{\circ} 05' E.$

**Matahiva** or Lazareff, of the Paumotu archipelago, a low, wooded island discovered by Bellingshausen in 1820. West end is in  $14^{\circ} 53' 30'' S.$ ,  $148^{\circ} 43' 30'' W.$

Mataiwa, a form of Matahiva.

**Mata kawa**, of the Talbot group is opposite the mouth of the Wassi kussa river of New Guinea.  $9^{\circ} 16' S.$ ,  $142^{\circ} 12' E.$

**Matamanoa**, uninhabited islet of the Mamanutha i thake group, Fiji.

**Matangi**, islet of Fakaafao or Bowditch.  $9^{\circ} 22' S.$ ,  $171^{\circ} 12' W.$

**Matangi**, a small, uninhabited island, 1 m. long, crescent-shape. Fiji.

**Matamuku**, islet south of Kandavu, Fiji; 700 ft. high.  $19^{\circ} 10' 20'' S.$ ,  $178^{\circ} 06' 40'' E.$

**Mataou** or East Sentinel, islet at entrance to Comptroller bay, Nukuhiva, Marquesas islands.

**Mataso** or Two Hill of the New Hebrides, is about 19 m. north from Nguni; 1650 ft. high. Natives friendly. Mission station.  $17^{\circ} 18' S.$ ,  $168^{\circ} 23' E.$

**Matathoni levu**, of Yasawa group, Fiji, 2 m. N-S. North point in  $16^{\circ} 57' S.$ ,  $178^{\circ} 18' 45'' E.$

**Matelotas**, see Ngoli of the Caroline islands.

**Matemá**, Swallow or Reef, comprise Lomlom, Nufiluli, Pileni, Nukapu, Anologo, Nibanga, Panavi, Nupani, Fenuloa. The group lies between  $10^{\circ} 04' - 10^{\circ} 22' S.$ ,  $165^{\circ} 39' - 166^{\circ} 19' E.$  British protectorate proclaimed August 18, 1898. **12.**

**Materbert**, small, rocky, off Gazelle peninsula of New Britain, Bismarck archipelago.

**Materhert**, of the Bismarck archipelago, is 0.2 m. long.  $4^{\circ} 17' S.$ ,  $151^{\circ} 32' E.$

**Matthias**, a mountainous and wooded islet northwest from New Hanover.  $1^{\circ} 32' S.$

**Mathieu**, islet of Malolo group, Fiji.

**Mathuata** (Macuata), off north coast of Vanua levu, Fiji; 1.5 m. long, 500 ft. high  $\pm$ .

**Matilda**, see Mururoa of the Paumotu archipelago. **22.**

**Matin**, islet of Marovo or New Georgia, Solomon islands.  $8^{\circ} 25' S.$ ,  $158^{\circ} 05' E.$

**Mato**, islet 5 m. south from Uen island.

**Matthew**, discovered by Captain Gilbert in 1788; 465 ft. high.  $22^{\circ} 20' 12'' S.$ ,  $171^{\circ} 20' 30'' E.$

**Matthew**, islet in Uitoe passage on the southwest side of New Caledonia.

**Matthew**, a basaltic cone southeast from New Caledonia.

**Matthew**, see Maraki of the Gilbert islands.

**Mattinson**, see Sophia of the Ellice group (existence uncertain).

**Matty**, or Maty, was discovered by Carteret September 19, 1767, and named for his friend Dr. Maty. It is 6 m. square, flat, and thickly peopled by a fine light colored race of uncertain relationship. Their implements are peculiar and exceedingly interesting.  $1^{\circ} 45' S.$ ,  $142^{\circ} 47' E.$  Probably this is Tiger of the charts. **8.**

**Matu avi**, one of the Stewart group.  $8^{\circ} 23' S.$ ,  $162^{\circ} 58' E.$

**Matukanaputa**, small and rocky island off Gazelle peninsula of New Britain; 60 ft. high.  $4^{\circ} 13' S.$ ,  $151^{\circ} 32' E.$

**Matuku**, in Fiji, is a good example of a high (1262 ft.) island with a fringing reef. The map is copied from the survey given in the *Challenger Report*. Matuku is 4.5 m. N-S. Carr's harbor on the west side is the best in the group. The volcanic peaks add great beauty to the scenery. The south point is in  $19^{\circ} 13' 30'' S.$ ,  $179^{\circ} 44' E.$  Population in 1880 was 712.

**Matupi**, a small volcanic island in Blanche bay, New Britain.  $4^{\circ} 13' S.$ ,  $152^{\circ} 10' E.$

**Maturei Vavao** or Estancélin of the Paumotu archipelago, is the southeastern of the Actæon group. It is 6 m. NW-SE. Northwest point is in  $21^{\circ} 27' S.$ ,  $136^{\circ} 28' W.$  **22.**

FIG. 7.

**Maty** was discovered by Carteret September 19, 1767, and named for his friend Dr. Maty. It is 6 m. square, flat and thickly peopled by a fine light colored race of uncertain relationship. Their implements are peculiar and exceedingly interesting.  $1^{\circ} 45' S.$ ,  $142^{\circ} 47' E.$  Probably this is Tiger of the charts. **8.**

**Mau**, Hinchinbrook or Vele of the New Hebrides, is a volcanic cone 2 m. in diameter, and 1493 ft. high. The crater is filled with vegetation. Natives peaceable.

**Maui**, of the Hawaiian group, is the second in size, measuring 466,000 acres. It is 43 m. long, divided by a low isthmus into East and West Maui. The former is the grand cone (10,032 ft. high) capped by the crater of Haleakala, which is more than 2000 ft. deep and 20 m. in circuit. The latter, also an ancient volcano, is lower (5820 ft.) and its flanks are deeply cut into picturesque valleys. Population in 1896 was 17,726. The north side of the isthmus is in  $20^{\circ} 54' 15'' N.$ ,  $156^{\circ} 29' W.$  **I.**

**Mauiki**, of the Hervey group, is about 6 m. in circumference, fertile, has no lagoon nor any opening in the fringing reef.  $20^{\circ} 07' S.$ ,  $157^{\circ} 22' W.$  **23.**

**Maupiti**, see Marua of the Society islands.

**Mausoleum**, a sugar-loaf-shaped hill 650 ft. high, between New Ireland and New Hanover in the Bismarck archipelago.  $2^{\circ} 44' S.$ ,  $150^{\circ} 32' E.$

Mauti of Byron is Mauiki of the Hervey group.

**Mavuva**, islet of Mathuata on the north coast of Vanua levu, Fiji.

**Mawtu**, islet of Fakaafao or Bowditch.  $9^{\circ} 25' 30'' S.$ ,  $171^{\circ} 12' 30'' W.$

**May**, see Yakuve, Fiji.  $18^{\circ} 51' 45'' S.$ ,  $178^{\circ} 27' E.$   $\odot$

**Mayon**, see Marua or Woodlark.

**Mayor**, see Tuhoua, New Zealand.

**Mba**, islet of Uitoe passage, southwest side of New Caledonia.

**Mbatiki** (Batiki), Fiji, near the centre of the group, is 2 m. in diameter and 609 ft. high. Population in 1880, 342.  $17^{\circ} 46' S.$ ,  $179^{\circ} 10' E.$

**Mbau** (Bau), Fiji, small island east from Viti levu, 80 ft. high.  $17^{\circ} 59' 16'' S.$ ,  $178^{\circ} 39' 20'' E.$

**Mbe**, islet in Port Uitoe, southwest side of New Caledonia.

**Mbenau**, islet on the south coast of Vanua levu, Fiji, 100 yds. in diameter, covered with palms.

**Mbenga** (Beqa), is  $5 \times 3$  m. and rises to 1400 ft.  $18^{\circ} 22' 15'' S.$ ,  $178^{\circ} 07' 30'' E.$

**Mboa**, islet in Uitoe passage on the southwest side of New Caledonia.

**Mbu**, islet in Port Uitoe, on the southwest side of New Caledonia.

**Mbua**, islet 35 ft. high on the shore reef at the southeast end of Nananu i thake, Fiji.

**Mbuimbani**, a conical island 430 ft. high in Nanuku passage, Fiji; planted with coconut trees.

**Mbulia** (Bulia), 460 ft. high, inhabited, in Kandavu group, Fiji.  $18^{\circ} 46' S.$ ,  $178^{\circ} 33' E.$

**Mbulo**, a small island off Cape Pitt of Marovo, Solomon islands; about 800 ft. high.  $8^{\circ} 45' S.$ ,  $158^{\circ} 15' E.$

**McAskill**, see Tugulu; also Pingelap.

**McKean**, of the Phoenix group, was discovered by Wilkes in 1840. It is low,  $0.7 \times 0.5$  m.  $3^{\circ} 36' S.$ ,  $174^{\circ} 16' W.$   $\odot$  **17.**

**Meaburn**, islet of Caroline islands.

**Meama**, islet of the Tongan group.

**Meck**, islet of Kwadjalin, Marshall islands.

**Nairai**, 10 m. N. by E. from Ngau, Fiji; 4 m. N-S., 1.5-3 m. E-W. Needle peak 1078 ft. high. The north point in  $17^{\circ} 45' S.$ ,  $179^{\circ} 28' 30'' E.$  In 1880 there were 612 inhabitants.

**Nairn**, off the southwest coast of Ysabel, Solomon islands.  $7^{\circ} 40' S.$ ,  $158^{\circ} 20' E.$

**Nairsa**, see Rangiroa (Rahiroa) of the Paumotu archipelago.

**Naitamba** (Naitaba), Fiji; is high and rugged, triangular, 1.5 m. in diameter, 610 ft. high. Inhabited by Europeans.  $17^{\circ} 03' 30'' S.$ ,  $180^{\circ} 46' E.$  ⊙

**Nakandra nui**, islet on the north coast of Vanua levu, Fiji.

**Nakoga**, see Anologo, Matema islands.

**Nakudi**, islet of Butaritari, Gilbert islands.  $3^{\circ} 08' 25'' N.$ ,  $172^{\circ} 41' 15'' E.$

**Nakumbutha**, small, rocky island off Vanua levu, Fiji.  $16^{\circ} 35' 30'' S.$ ,  $178^{\circ} 36' 30'' E.$  ⊙

**Nalap**, islet of Ponapé, Caroline islands, off Ronkiti river.

**Nalogo**, a trader's name for Anologo.

**Nama** or D'Urville (Peace?), of the Caroline islands, is small, without a lagoon, but higher than most of the group.  $6^{\circ} 59' N.$ ,  $152^{\circ} 33' E.$  4.

**Namaka**, islet of Butaritari, Gilbert islands.  $3^{\circ} 11' 30'' N.$ ,  $172^{\circ} 54' E.$

**Namatotte**, off the New Guinea coast.  $3^{\circ} 53' S.$ ,  $133^{\circ} 49' E.$

**Nambite**, low, off Vanua levu, Fiji. North point in  $16^{\circ} 27' 54'' S.$ ,  $178^{\circ} 50' E.$

**Namena** or Direction, Fiji; two high (320 ft.) hills covered with dense foliage; uninhabited;  $1 \times 0.2$  m. Namena reef encloses a lagoon 13 m. long and 2-3 m. wide, with an average depth of 16-20 fathoms.  $17^{\circ} 06' S.$ ,  $179^{\circ} 06' E.$

**Namo** or Margaretta of the Marshall islands. South point in  $8^{\circ} 55' N.$ ,  $167^{\circ} 42' E.$

**Namoliaur**, islet of Elato, Caroline islands.

**Namolipiafane**, of the Caroline islands, was discovered by Hall in 1824. The reef is 40 m. in circumference, encloses 13 islets, among them Ikop, Fananon, Namonine.  $8^{\circ} 25' 30'' N.$ ,  $151^{\circ} 49' 15'' E.$  4.

**Namoluk** or Skiddy, of the Caroline islands, was discovered by Lütke in 1828. Reef is 15 m. in circumference, with five islets.  $5^{\circ} 45' 15'' N.$ ,  $153^{\circ} 16' 30'' E.$  4.

**Namonuito**, Bunkey, Anonima, Livingstone, was discovered by Ibargoitia in 1801. Reef enclosing the group is 45 m. E-W. The islets are Amytideu, Maghry, Maghyrarik, Ounalik, Onoup, Pilipal, Pizaras and Ulul.  $8^{\circ} 33' N.$ ,  $150^{\circ} 31' E.$

**Namorik** or Baring, of the Marshall islands, was discovered by Captain Bond December 15, 1792. Two islands on a reef 5 m. in diameter. Population about 300.  $5^{\circ} 35' N.$ ,  $168^{\circ} 18' E.$  6.

**Namorus** or Namorousse, islet of Morileu, Caroline islands.

**Namotu**, islet 300 yds. in diameter on the west coast of Viti levu, Fiji.

**Namtuiroj**, islet of Kwadjalin, Marshall islands.

**Namu**, see Nemu.

**Namua**, islet east from Upolu, Samoan islands.

**Namuine**, islet of the Namolipiafane atoll in the Caroline islands.  $8^{\circ} 25' 30'' N.$ ,  $151^{\circ} 49' 15'' E.$

**Namuka**, see Nomuka, Tongan islands.

**Namuka** is 7 m. west from Mbenga, Fiji, enclosed in the same reef; 1.7 m. N-S. by 1 m.  $18^{\circ} 21' 50'' S.$ ,  $177^{\circ} 58' 50'' E.$  1.

**Namuka i lau** (eastern), 15 m. north from Fulanga, Fiji; 4 m. E-W., 1.5 m. N-S.; 260 ft. high. East point in  $18^{\circ} 47' S.$ ,  $181^{\circ} 21' 30'' E.$

**Namuka**, islet 3 m. southwest from Suva harbor, inside the shore reef; inhabited. Fiji.

**Namuka**, islet off centre of south side of Api, New Hebrides; 500 ft. high.  $16^{\circ} 49' S.$ ,  $168^{\circ} 19' E.$

**Nananu** group, Fiji, consists of Nananu ira and i thake (leeward and windward); 230 ft. high.

**Na Ndongu** or Tiri islands, off north coast of Vanua levu, Fiji.

**Nangani**, 5.5 m. northwest from Ovalau, Fiji; 1 m. N-S., 600 ft. high.

**Nangati**, in Yasawa group, Fiji;  $1 \times 0.5$  m., 930 ft. high; inhabited.  $16^{\circ} 57' 30'' S.$ ,  $177^{\circ} 19' 40'' E.$  1.

**Nani**, islet between Nékété and Lavaissiere bays on the southeast coast of New Caledonia.

**Nanikirata**, islet of Apaiang, Gilbert islands.  $1^{\circ} 54' N.$ ,  $172^{\circ} 54' 30'' E.$

**Nanomanga** or Hudson, of the Ellice group, is 1.5 m. N-S., 1 m. E-W.; lagoon closed. Population in 1886 was 320 protestants.  $6^{\circ} 13' S.$ ,  $176^{\circ} 16' 30'' E.$  16.

**Nanomea**, the San Augustine of Maurelle, 1781, was discovered by Maurelle. There are two islands on the reef within 3-4 m. of each other, the westerly called Lakenu, the other Nanomea. Supposed to be the Taswell and Sherson of the brig *Elisabeth*, 1809. Nanomea is  $4 \times 1.5$  m. Rev. J. S. Whitmee says the inhabitants are physically a remarkably fine race, numbering about 1000 (1870). This is the northernmost of the Ellice group.  $5^{\circ} 36' 30''$  S.,  $176^{\circ} 10'$  E.  $\odot$

**N'dakue**, islet in Port Uitoe on the southwest side of New Caledonia.

**Ndundine**, Ndundure or Molard, uninhabited island west from Maré, 3 m. in circumference. Loyalty islands.

**Néa**, islet in Kuabuni opening on the southeast coast of New Caledonia.

**Néba**, inhabited islet in Pumé passage, northwest coast of New Caledonia.

**Necker**, of the Hawaiian group, was discovered by La Pérouse November 1, 1786. Named for the great minister of Louis XVI. Rocky; 280 ft. high; volcanic, the remains of a crater with a shoal extending miles to the southward.  $23^{\circ} 35' 18'' N.$ ,  $164^{\circ} 39' W.$

Neckes, see Puketutu, New Zealand.

Negeri, see Nihiru of the Paumotu archipelago.

**Nekumara**, islet between Dobu and Kwaiope, east from Dawson strait, D'Entrecasteaux group.  $9^{\circ} 44' S.$ ,  $150^{\circ} 54' E.$

**Nemu** or Double, islet in Infernet passage on the southwest coast of New Caledonia.

**Nemu** or Musquillo, atoll of the Marshall islands. The south point is in  $8^{\circ} 14' N.$ ,  $168^{\circ} 03' E.$

**Nendahandé**, islet south from Balabio on the northeast coast of New Caledonia.

**Nendialé**, islet in Banaré bay on the northwest coast of New Caledonia.

**Nengone**, the native name of Maré or Britannia of the Loyalty islands.

**Nengonengo** or Prince William Henry of the Paumotu archipelago was discovered by Wallis in 1765; 5 m. E-W. North end is in  $18^{\circ} 43' S.$ ,  $141^{\circ} 40' W.$  **21.**

**Neni**, low and covered with coconut trees, on the northeast coast of New Caledonia.

**Nenon** or Nenu, in Port Bouquet on the east coast of New Caledonia; 1.5 m. E. by N.-W. by S.

**Nepean**, island with extensive reefs in Torres strait.  $9^{\circ} 34' S.$ ,  $143^{\circ} 38' E.$

**Nepean**, one of the Kermadec islands; 0.2 m. long, 50 ft. high.  $29^{\circ} 04' S.$ ,  $167^{\circ} 58' E.$

**Netherland**, see Nui of the Ellice islands.

**Neu Hannover**, see New Hanover.

**Neu Lauenburg**, German name for Duke of York islands.

**Neu Mecklenburg**, German name for New Ireland. It seems unfortunate that in changing the well-known names of their new possessions the Germans should not have improved on the former rather unsuitable appellations. I cannot see that New Mecklenburg is any more appropriate than New Ireland.

**Neu Pommern**, the German name for New Britain.

**Nevelo**, see Lomlom, Santa Cruz.

**Nevil**, see Tobi, Caroline islands.

**New**, island of the New Guinea region.  $2^{\circ} 30' S.$ ,  $131^{\circ} 34' E.$

**New Amsterdam**, the name given by Tasman to Tongatabu.

**New Britain** (Neu Pommern of the Germans). Carteret, in 1767, found that what Dampier had supposed a bay when in 1700 he sailed through the strait that bears his name and proved that there was an island distinct from New Guinea, was really another strait, so he named the land to the east New Ireland, and the western one New Britain. Little is known of New Britain, large as it is. There are many active volcanoes in the long and narrow island. Cannibals are numerous but in constant tribal warfare; 330 m. long, nowhere more than 50 m. wide. The north point is in  $4^{\circ} 07' S.$ ,  $152^{\circ} 10' E.$  **10.**

**New Caledonia** was partly discovered by Cook, but D'Entrecasteaux completed the work. Taken by France in 1853 it was made a penal settlement in 1883 in spite of the experience of England in her Australian penal stations, and the constant escape of convicts is a great damage to the neighboring colonies. New Caledonia is about 216 m. long, 30 m. broad. There are two parallel ranges of mountains extending the whole length; the eastern, about 2500 ft. high, has an even and regular outline, while the western mountains are higher (2600-3600 ft.) and more irregular in form. Mt. Douit, over Cape Colnett, is 5570 ft. high. Among other minerals nickel is found here.\* The native houses are generally conical. The

natives use jade in weapons and ornaments. The winter season is from December 15 to April 15. The north point is in  $20^{\circ} 45' S.$  **13.**

New Georgia, see Rubiana of the Solomon islands.

**New Guinea** was discovered by the Portuguese Jérôme de Meneses in 1524; visited by Saavedra in 1528; Grijalva y Alvarado in 1537; Inigo Ortiz de Retes in 1545, and the last gave the name New Guinea. The history of the discovery of New Guinea is a most complicated one, each discoverer mapping but a small portion of the coast, and to this day the coast line is not well surveyed, while much of the interior remains unexplored. In 1705 a Dutch expedition explored the deep bay on the north coast which was named for one of the ships of the expedition Geelvink (yellow finch), and many other Dutch explorers were sent by the East India Company from Batavia to this portion of New Guinea which was gradually claimed by Holland. The boundary of Dutch New Guinea on the east is a straight line drawn from Cape Bonpland on the east side of Humboldt bay, in  $140^{\circ} 47' E.$  longitude to  $140^{\circ} E.$  on the south coast. In 1885 the portion not claimed by the Dutch east of the 141st meridian was divided between England and Germany, the former taking the south coast from the mouth of Bensbach river in latitude  $9^{\circ} 07' 35'' S.$ , longitude  $141^{\circ} 01' 48'' E.$ , this meridian forming the boundary till it meets the Fly river which becomes the boundary until it crosses the 141st meridian; also all the north coast from the east point to Mitre rock in latitude  $8^{\circ} S.$  April 4, 1883, the resident magistrate at Thursday island hoisted the British flag at Port Moresby and took possession of all between  $141^{\circ}$  and  $155^{\circ} E.$  And on September 4, 1888, the Administrator proclaimed the annexation as a crown colony under the name of British New Guinea.

In its greatest length WNW.-ESE. New Guinea extends 1306 m., and its area, including adjacent islands, is about 312,000 sq. m. The Owen Stanley range rises to a height of 13,205 ft. Many tribes are found, but the type is Papuan, and is found in purity on the northern portion. To the northeast Polynesian colonies have resulted in some mixture. On the south coast the natives are enterprising traders, making long voyages with the monsoons in their *lakatois* which are clumsy, compound boats with two masts and V-shaped sails. Sago and pottery are the principal cargo. Houses on the shore are built on piles, and farther inland often in trees for safety.

For further information as to the discovery see Bougainville, Edwards, Flinders, D'Entrecasteaux, Freycinet, D'Urville, Moresby, Owen Stanley. And for the geography and general description, see D'Albertis, Lawes, Chalmers, Powell, and the reports of the Administrator.

**New Hanover** (Neu Hannover of the Germans) was discovered by Carteret. It is 37 m. E-W., 20 m. N-S. Fertile and mountainous, rising to 2000 ft. **10.**

**New Hebrides.** Quirós was the first to discover any of the extensive group, or rather groups, which are now known by the collective name of New Hebrides. He saw but one island which he fondly imagined was part of the great southern continent, then the dream of navigators, and he called his discovery *Australia del Espíritu Santo*, a name since curtailed to Santo in the Trader's vernacular. Cook discovered most of the southern chain and he gave the name New Hebrides in 1773. The natives

are of the black Papuan or Melanesian stock and have a reputation for cannibalism, treachery and uncertain temper. They have been outraged repeatedly by the labor pirates, and their hostility to the kind of white men who have principally reached their islands does not seem unreasonable. They are far from being an homogeneous population: Polynesian settlements exist throughout the group, and more than a score of languages are noted. The climate is not very well suited to white occupation, being damp and otherwise unwholesome. Although the group has not been well studied interesting particulars of portions of the islands have been published by the missionaries who have labored against great discouragement, and more especially by Commander Markham in his "Cruise of the Rosario," 1872. Walter Coote's "Wanderings, South and East," 1892; and Julius Brenchley's interesting "Cruise of the Curaçoa," 1865.

Part of the group has already been annexed by Great Britain, and it is supposed that France has desires for the rest as contiguous to her New Caledonian colony. Several agricultural companies of each nation are attempting to develop the resources of the country. **12.**

**New Ireland** (Neu Mecklenburg) was supposed by Lemaire and Schouten to be a part of New Guinea. Dampier, in 1700, proved it to be a separate island, and sixty-seven years later Carteret demonstrated the strait between it and New Britain. 240×15 m., volcanic and rising to 7000 ft. Papuans, physically inferior to those of the Solomon islands. Cannibals; practise circumcision but not tatuing. Country not well known.

New Jersey adjoins Santa Cruz.

**New Zealand.** This important group lies between the parallels of 34° 30' and 47° 30' south latitude and the meridians of 166° 36' 30" and 178° 36' 05" east longitude, being roughly the antipodes of Great Britain. The area is 104,403 sq. m. or nearly equal to that of the British islands. The three islands are variously styled, but the Maori names were *Te ika a Maui* (The fish of Maui) for the northern one; *Te wahi Pounamu* (The place of Greenstone) for the middle; and *Rakiura* for Stewart island. These have given place to New Leinster, New Ulster and New Munster (of Governor Hobson), or more commonly Northern, Southern and Stewart.

Tasman sighted the western coast December 13, 1642, but in sending a boat ashore the natives attacked and killed four of the crew. Tasman called the place Mordenaars (Murderers) bay and did not again attempt to land, but sailed to the extreme northern end, discovering Three Kings islands (on the eve of Epiphany) and thence sailed to the Tongan islands. Tasman's first name, Staatenland, he later changed to Nova Zealand. Cook was the next European to reach these shores (October 6, 1769) and in Mercury bay, on November 11, he took formal

possession for King George III. Cook spent nearly a year (327 days) in the group and his surveys gave the first definite knowledge of the islands.

As early as 1814 a Church mission was started and later other denominations followed. In 1840 both Wellington and Auckland were founded and colonists gathered until the natives were driven to exasperation and wars followed for many years. At present all is peace and by the wise system of the British the Maoris are segregated as much as possible, so that the traveller who merely visits the principal cities rarely sees a Maori. The census of 1881 gave 44,099, a slight increase over the previous one. Yet, as the estimate in 1840 was 107,000, the race is dying as all other inferior people must in the presence of the white intruders.

The Maori race is supposed, mainly on the basis of their own traditions, to have come to New Zealand in the fifteenth century from Hawaiki to the eastward. Their language closely resembles the Hawaiian, but these, whose traditions go far beyond that date, have no remembrance of such an emigration as told in the Maori traditions. When first discovered they were cannibals and particularly fierce, but like other cannibals they showed remarkable talent for fine work; and to their intelligence is due the fact of their rapid conversion to Christianity and their comprehension of the advantages of civilization, which while removing them speedily from a world of trouble promised them a pleasanter one beyond the grave, "where the wicked cease from troubling." Maoris are a fine race of Poly-

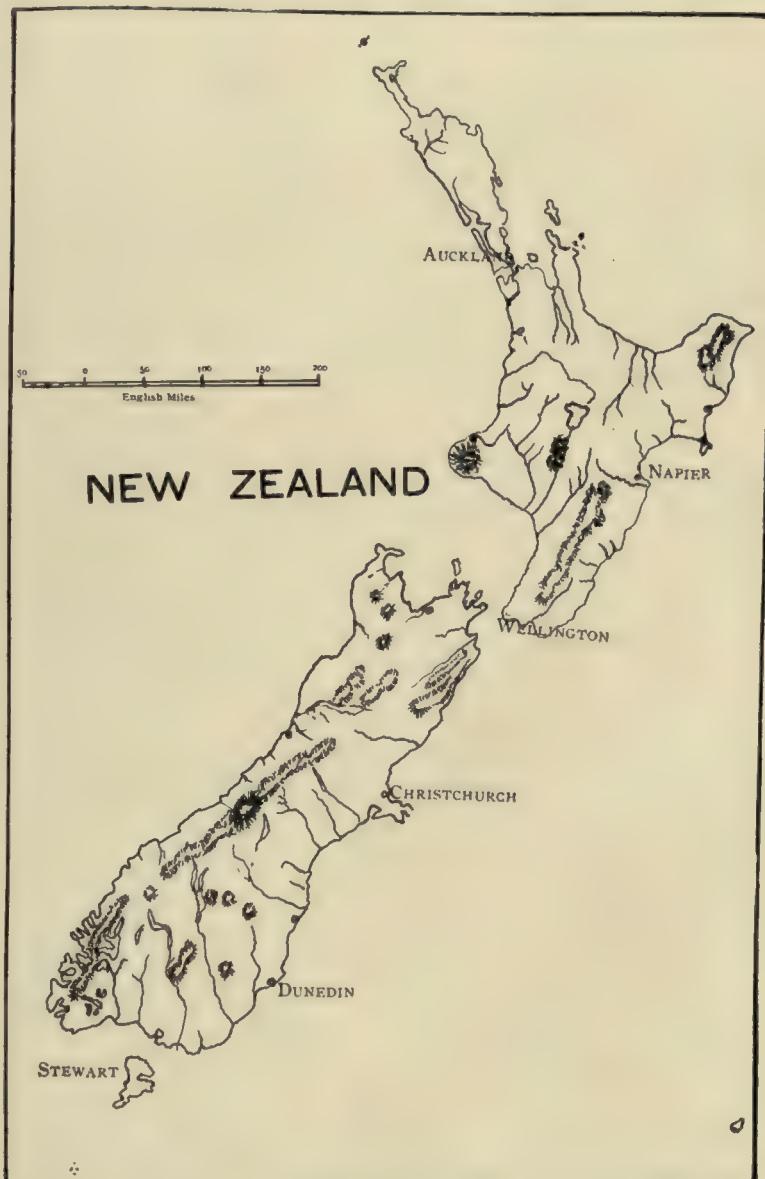

FIG. 8.

nesians, more manly and vigorous than the Hawaiian whom they closely resemble in outward form.

The climate of New Zealand is not extreme but is subject to sudden changes, which do not increase the death rate which is very low. Volcanoes and snow-capped mountains add greatly to the beauty of the scenery, and also give variety to climatic effects. One thing is quickly noticed by the traveller, that the ruddy complexions of England are rather enhanced here while they soon disappear in the Australian colonies.

**Nexsen**, a name given by Fanning, in 1798, to Hatutu of the Marquesas islands.

**Ngaloa** (Galoa), of the Fiji group, is a small island which gives its name to the harbor on the south side of Kandavu.  $19^{\circ} 05' 10''$  S.,  $178^{\circ} 11' 30''$  E. (*Challenger survey*.)

**Ngaloa**, on the north coast of Vanua levu, north of Lekutu river. Thickly peopled.  $16^{\circ} 37' 24''$  S.,  $178^{\circ} 41' 32''$  E.  $\odot$  **14**.

**Ngamea** (Qamea), northeast from Taviuni, Fiji; 5.7 m. long E-W., 1000 ft. high; about 500 inhabitants.  $16^{\circ} 47'$  S.,  $179^{\circ} 44'$  W. **14**.

**Nganati**, Pinaki or Whitsunday of the Paumotu archipelago, was discovered by Wallis in 1767. It is low and wooded.  $19^{\circ} 40' 22''$  S.,  $140^{\circ} 22' 28''$  W. There is much confusion on the charts. **21**.

**Ngasi mbali**, a low, uninhabited islet off Kandavu, Fiji, 60 ft. high.

**Ngatik**, or Raven islands, 50 m. sw. from Ponapé; discovered in 1773 by Don Felipe Tompson; 22 m. in circumference, and there are 11 islets on the unbroken reef. There is a small lagoon. Much copra is exported.  $5^{\circ} 47' 30''$  N.,  $157^{\circ} 32'$  E. **5**.

**Patrocinio** or **Byer**, of the Hawaiian group, was discovered by Captain Zipiani, of the Spanish ship *Nuestra Señora del Pilar* in 1799; 3 m. long, volcanic. Called **Byer** by Captain Morrell, July, 1825. Place doubtful.  $28^{\circ} 30'$  N.,  $177^{\circ} 18'$  E. It has been expunged from the British Admiralty charts on perhaps insufficient grounds.

**Paumotu**, Tuamotu or Low archipelago. Coral atolls extending over sixteen degrees of longitude. The native name means "Cloud (or bunch) of islands." Quirós, in 1606, saw several islands of the group, but these cannot now be determined so great is the similarity among all these islands. Many of the great navigators observed several islands, but Wilkes (1841) gave more accurate details, and to his surveys the modern charts are chiefly indebted. The inhabitants vary from the Vitian to the Tahitian type. There are 78 atolls each numbering many islets; 18 atolls are inhabited, the population being estimated at 8000, nearly all of them Protestants. Flies are very troublesome. Principal exports, copra and pearl shell, in the hands of American and British merchants of Tahiti. France took the archipelago in 1844 and the French Resident is stationed on Fakarava. The detached islands to the southeast, Ducie, Henderson, Pitcairn and Oeno are British possessions. From the structure of the atolls their form is continually changing, and occasionally in severe storms the sea breaks over them destroying the inhabitants and making radical changes in the geography. **20, 21, 22.**

**Pele**, northeast from Faté, New Hebrides; 2 m. long, 300 ft. high; Polynesian inhabitants.

**Pelelep**, of Duperrey is Pingelap, Caroline islands.

**Peleliu** or Piliu, of the Pelew islands, extends 3 m. NE-SW.  $6^{\circ} 58' N.$ ,  $134^{\circ} 16' 15'' E.$

**Pelew** or Palao, the Arrecifos of Villalobos, who discovered them in 1543, extend about 85 m. N-S., while the greatest breadth does not exceed 7 m. A barrier reef with many passages extends the whole length of the group. The population in 1875 was 10,000; less than a century before it was 40,000. No pestilence, no massacres, simply want of energy. Semper says: "The iron of the European followed too close upon the stone of the savage." The six principal islands are N'yaur on the south, Peleliu, Eil Malk or Irakong, Uruktapi, Korror (seat of government), and Babeltop, with many islets.

**Pines** (Isle of), lies southeast from New Caledonia and belongs to France; 11.5 m. NW-SE.; 880 ft. high. About 800 natives of Papuan stock and formerly cannibals. Here the French missionaries took refuge in 1847 when driven by the natives from Balade in New Caledonia.  $22^{\circ} 39' 20'' S.$ ,  $167^{\circ} 28' E.$  **13.**

**Pingelap**, Musgrave or MacAskill, of the Caroline islands, was discovered by Captain Musgrave in the *Sugar Cane*, 1793; and again by Captain MacAskill of the ship *Lady Barlow* in 1809. Three islands compose the group which is 2.5 m. in diameter; Pingelap is the southern and principal, Taka is small, and Tugulu (Chikuru) is the northern. They are well wooded and have about 900 inhabitants, of light color.  $6^{\circ} 12' N.$ ,  $160^{\circ} 53' E.$  **5.**

**Pionne**, islet of Banaré bay on the northwest coast of New Caledonia.

**Piper**, a group on the Australian coast.  $12^{\circ} 15' S.$ ,  $143^{\circ} 14' E.$

**Pipoa**, on the Australian coast.  $14^{\circ} 07' S.$ ,  $144^{\circ} 32' E.$

**Piron** or Yeina is 11 m. northwest of Tagula in the Louisiade archipelago. Inhabitants warlike.

**Pise** or **Pis**, islet of Ruk, Caroline islands.  $7^{\circ} 42' 30'' N.$ ,  $151^{\circ} 46' E.$

**Pisonia**, one of the Wellesley group in the Gulf of Carpentaria, northeast from Mornington.  $16^{\circ} 30' S.$ ,  $139^{\circ} 32' 30'' E.$

**Pitcairn** was discovered by Carteret July 2, 1767. Supposed by some to be the Encarnacion of Quirós; 2.2 m. E-W., 1 m. wide, 1000 ft. high. Named for a relative of the Major Pitcairn who fired the first shot in the American revolution. Most interest attaches to this island from the mutiny of the *Bounty* in 1789. These mutineers were not the first inhabitants, however, for skeletons buried with stone adzes and a pearl shell not found now on the island, have been unearthed in several places. British protectorate proclaimed August 18, 1898. Adamstown is, according to Beechey, in  $25^{\circ} 03' 37'' S.$ ,  $130^{\circ} 08' 23'' W.$

**Pitt**, a small, low, wooded island on the New Guinea coast.  $10^{\circ} 35' 20'' S.$ ,  $151^{\circ} 02' 50'' E.$

**Pitt**, see Makin of the Gilbert islands.

**Pitt**, see Rangiauria, one of the Chatham islands.

**Pizaras**, islet of Namonuito, Caroline islands.  $8^{\circ} 34' 20'' N.$ ,  $150^{\circ} 32' 30'' E.$  4.

**Platform**, islet in midst of reefs, Admiralty group.  $2^{\circ} 44' S.$ ,  $147^{\circ} 03' E.$

**Pleasant**, see Nawodo of the Gilbert islands.

**Pleiades**, a group northwest from Uea, Loyalty islands. They are, beginning at the northeast end, North, Isénay or La Baleine, La Tortue, Fatouba, Huéguénée or Pine, Oidi, Deguala.

**Poanopa**, a way of spelling Bonabe.

**Pollard** Rock, a name of Gardner of the Hawaiian islands.

**Pole**, in Torres strait.  $10^{\circ} 12' S.$ ,  $142^{\circ} 28' E.$

**Poll**, of the Three Sisters group in Torres strait.  $10^{\circ} 15' S.$ ,  $142^{\circ} 49' E.$

**Poloa**, islet of Tongatabu on the northwest.  $20^{\circ} 05' 30'' S.$ ,  $175^{\circ} 14' 30'' W.$  18.

**Poloat** or Enderby, of the Caroline islands. In 1799 Ibargoitia discovered an island which he called Kata. Freycinet found it was two distinct islands, one of which he called Alet, the other Poloat or Pozoat. They are on a reef 6 m. E-W. Population about 100.  $7^{\circ} 19' 25'' N.$ ,  $149^{\circ} 15' E.$  The group is usually called Enderby, a name given by Captain Renneck in 1826 in honor of his employers, London merchants.

**Pomodedere**, in Cloudy bay on the New Guinea coast.  $10^{\circ} 17' S.$ ,  $148^{\circ} 46' E.$

**Pompom**, islet off the south coast of Murua in the Kiriwina group.  $9^{\circ} 07' S.$ ,  $152^{\circ} 31' E.$

**Ponafidin**, one of the Bonin islands.

**Ponapé** or Ascension was discovered by Lütke January 2, 1828; 12 m. N-S., 14.5 m. E-W.; 2861 ft. high; coral reef 60 m. in circumference, on which are many basaltic rocks or islets. Metalanien harbor, which is in  $6^{\circ} 51' N.$ ,  $158^{\circ} 18' E.$ , has on the shores very interesting ruins (see *Geographical Journal*, 1899, p. 105; also, *La Isla de Ponape*, by Pereiro, 1895; both give maps of these ruins which were first noticed by Dr. L. H. Gulick of the American mission). Ponapé is the largest and most important of the Caroline islands. Fanua pei=Land of the holy places. 5.

**Pones**, islet of Ruk, Caroline islands.

**Ponui**, in Auckland harbor, New Zealand.

**Poporang**, islet of Shortland, Solomon islands. **II.**

**Porcupine**, islet at base of Mont d'Or at the south end of New Caledonia; 300 ft. high, rocky and covered with fir trees.

**Porondu** or Contrarieté, islet on the southwest coast of New Caledonia; low and wooded.

**Pororan**, off the west coast of Bouka, Solomon islands.  $5^{\circ} 15' S.$ ,  $154^{\circ} 30' E.$

**Portland**, three low, wooded islands in the Bismarck archipelago, the eastern one the largest; 2.5 m. long, inhabited.  $2^{\circ} 38' S.$ ,  $149^{\circ} 40' E.$

Portland, see Waikawa, New Zealand.

**Portlock**, in Torres strait.  $10^{\circ} 07' S.$ ,  $142^{\circ} 22' E.$

**Possession**, northeast from Banks in Torres strait.  $10^{\circ} 05' S.$ ,  $142^{\circ} 20' E.$

**Possession**, in Endeavor channel.  $10^{\circ} 42' S.$ ,  $142^{\circ} 23' E.$  It seems probable that there is but one Possession island, but on the chart sometimes one, sometimes the other position is given.

**Pott**, one of the Belep group northwest from New Caledonia; 4 m. NW-SE.

**Powell**, islet near Pender in the Louisiade archipelago.

**Pozoat** or **Poloat**, eastern islet of Enderby group, Caroline islands.  $7^{\circ} 20' N.$ ,  $149^{\circ} 17' E.$

**Predour** (Le) islet off St. Vincent bay on the southwest side of New Caledonia.

Predpriatie, see Akahaina, Paumotu archipelago. Named for Kotzebue's sloop of war.

**Prince Frederick Henry**, a low, flat island, 90 m. long, on the southwest coast of New Guinea, north of the Gulf of Carpentaria.

**Prince of Wales**, a group in Torres strait, comprising Thursday, Horn, Prince of Wales, Friday (Quarantine station), Goode and Hammond.  $10^{\circ} 40' S.$ ,  $142^{\circ} 11' E.$

Prince William Henry, see Nengonengo of the Paumotu archipelago.

Prince William Islands, Tasman's name for the Fijian group.

Princessa, see Lib of the Marshall islands. **6.**

Proby, the name given by the discoverer, Captain Edwards, to Niuafoou, Tongan islands.

Protection, see Leausan, off the northwest coast of Faté, New Hebrides. Leleppa, on the same coast, is also called Protection, or are they perhaps confounded?

Providence, see Udjelong of the Marshall islands.

**Pudiué** or Observatory, islet off the northeast coast of New Caledonia. Here was buried Huon de Kermadec, captain of the *Esperance* of D'Entrecasteaux' expedition. (Died May 7, 1792.)

**Puen**, islet, see Montravel, New Caledonia.

**Pugelug**, islet of the Caroline islands.

Pukapuka, a name given by traders to Tog in the Torres group.

**Pukapuka**, or Clerke, low, inhabited atoll of the Paumotu archipelago.  $17^{\circ} 23' S.$ ,  $138^{\circ} 35' W.$

**Pukapuka**, the north island of the Danger group, 80 ft. high. Population, 375; coconut trees abundant.  $10^{\circ} 53' S.$ ,  $165^{\circ} 45' 30'' W.$

**Pukapuka**, Henuake, Honden or Dog, was discovered by Lemaire and Schouten April 10, 1616; 330 m. west from Manahiki, and consists of three islets around a fine

closed lagoon. The first *John Williams* was lost here in 1864. Uninhabited, but it is said that there are snakes there.  $14^{\circ} 55' 40''$  S.,  $138^{\circ} 47' 36''$  W.  $\odot$  Must not be confounded with Danger island. 22.

**Pukararo** (*raro* = leeward), one of the islets of Vairaatea, Paumotu archipelago. North end is in  $19^{\circ} 18'$  S.,  $139^{\circ} 18'$  W. 22.

**Pukaruha**, or Serle, was discovered by Captain Wilson in the *Duff* May 28, 1797, who named it for the author of *Horae Solitariae*;  $7.5 \times 2.2$  m., 12 ft. high, with closed lagoon; 120 inhabitants. Southeast extreme is in  $18^{\circ} 22' 30''$  S.,  $136^{\circ} 58' 30''$  W. (Beechey.) 22.

**Pukarunga** (*runga* = windward), islet of Vairaatea, also called Egmont; discovered by Wallis in 1767.  $19^{\circ} 18'$  S.,  $139^{\circ} 18'$  W. 22.

**Puketutu** or Neckes, in Manukau harbor, New Zealand.

**Pully**, one of the Tiri group, off Vanua levu, Fiji.  $16^{\circ} 25' 24''$  S.,  $179^{\circ} 07'$  E.  $\odot$

**Pulo Anna** or Current, of the Pelew group, is half a mile long, low, inhabited. Pulo is the Malay for island.  $4^{\circ} 38'$  N.,  $132^{\circ} 02'$  E.

**Pulo Marière** or Warren Hastings, Caroline islands, was discovered in 1761. Low, inhabited; natives resemble Malays. 1.5 m. N-S.  $4^{\circ} 20'$  N.,  $132^{\circ} 28'$  E. (?)

Pulo Suge or Pulusuk, see Suk of the Caroline islands. 4.

Pulo Wat, see Fanadik, Caroline islands.

**Puna**, northernmost of the Malume group, Bismarck archipelago.  $3^{\circ} 10'$  S.,  $154^{\circ} 25'$  E.

**Punawan**, largest of the Duperré group, Louisiade archipelago.

**Puramatara**, islet off Cape Surville, San Cristóval, Solomon islands.

**Purdy**, a group of which the islands were by Krusenstern named Bat, Mole and Mouse.  $2^{\circ} 55'$  S.,  $146^{\circ} 28'$  E. The inhabitants resemble Admiralty islanders. 8.

**Puynipet**, one of the many forms of Ponapé.

Pylstaart (Tropic Bird), see Ata of the Tongan islands. Tasman's name.

**Pyramid**, islet of Malaita, Solomon islands.

**Qakea**, islet on the east coast of Vanua Lava, New Hebrides, at the south entrance to Port Patteson. Here the language of Mota is spoken.

**Qamea**, the Fijian orthography of Ngamea, Fiji.

Ramos (Los), a name given by both Gallego and Figueroa to Malaita, Solomon islands.  $8^{\circ} 19' S.$ ,  $160^{\circ} 09' E.$

**Ramung**, islet on the northern side of Yap, Caroline islands.

Ranai, a form of Lanai, Hawaiian islands.

**Rangiauria** or Pitt, the southeastern of the Chatham islands, New Zealand.

**Rangiroa**, Rahiroa, Vliegen, Deans or Nairsa, is an extensive atoll with many islets; 66 m. long, inhabited. (Wilkes, I., 337.)  $15^{\circ} 05' 15'' S.$ ,  $147^{\circ} 58' 34'' W.$  **20.**

**Rangitoto**, a volcanic island in Auckland harbor, New Zealand.

**Rano**, islet on the northeast coast of Malekula, New Hebrides. **12.**

**Raoul** or Sunday was discovered by D'Entrecasteaux March 15, 1793; 12 m. in circumference, 1627 ft. high. Of the Kermadec group, belonging to New Zealand.  $29^{\circ} 20' S.$ ,  $178^{\circ} 10' W.$   $\odot$  Joseph and Ange Raoul were pilots on the *Recherche*.

Raoul was represented on former charts as an island of some size between Gicquel and Willaumez in the Bismarck archipelago. It is now found to be part of a mountainous peninsula of New Britain. **10.**

**Rapa** or Oparo was discovered by Vancouver December 22, 1791; about 20 m. in circumference, and 2100 ft. high. Natives do not know the name Oparo, but call the island Lappa (Rapa). Climate delightful. When discovered population numbered 1500 fine Polynesians resembling Maoris; February 23, 1882, there were but 100 all told. On six hills there are stone fortifications like the Rapanui terraces. Natives make a thick, heavy kapa. French protectorate in 1844; island annexed to France February, 1882. See account by Captain Vine Hall, *Proc. Roy. Geog. Soc.*, June, 1869.  $27^{\circ} 36' S.$ ,  $144^{\circ} 22' W.$

**Rapaiti**, islet of Rapa.  $27^{\circ} 38' S.$ ,  $144^{\circ} 15' W.$

**Rapanui** or Easter, said to have been seen by Davis in 1686. Admiral Roggewein saw it first on April 6, 1722 (Easter Sunday). Cook saw it in 1774. It is of triangular form, the longest side measuring 13 m. NE-SW. Volcanic with trachytic lava and obsidian. The inhabitants are Polynesian from Rapa, and they call their island "Te Pito o te honua," the navel of the earth. The most interesting remains on the island are the huge images so often described, and other relics of

ancient inhabitants. Rapanui was surveyed by Beechey in 1825, and by H. M. S. *Topaze* in November, 1868. For full account see *Anuario Hidrografico de la Marina de Chili*, 1881, pp. 164-190., Santiago.; *Tour du Monde*, XXXVI., 225. The best account is by W. J. Thompson, U. S. Navy, in the *Report of the U. S. Nat. Museum*, 1889, p. 447. From this the map is copied.  $27^{\circ} 08' S.$ ,  $109^{\circ} 25' W.$

**Raputata** or Welle, also called Sanaroa, of the D'Entrecasteaux group, is low, 10 m. N-S., 8 m. E-W.. About 250 inhabitants.  $9^{\circ} 38' S.$ ,  $151^{\circ} E.$  9.

**Rara**, western of Sloss group, Louisiade archipelago.

Rara ni Tinka, a name of Tavuka, Fiji.

**Raraka**, of the Paumotu archipelago, was discovered October 1, 1831, by Captain Ireland of the brig *Adhemar*. It is triangular, 15 m. on a side. Lagoon has deep blue water. (Wilkes, I., 330.) Inhabited. West point is in  $16^{\circ} 08' S.$ ,  $145^{\circ} 00' 40' W.$

**Raroia** or Barclay de Tolly

was discovered by Bellingshausen in 1820; of the Paumotu archipelago; population, 75. The north point is in  $15^{\circ} 56' S.$ ,  $142^{\circ} 22' W.$

**Rarotonga**, a beautiful island of the Hervey group, was discovered by John Williams in 1823; at least he gave the first authentic report of it. It is about 30 m. in circumference, volcanic, and very fertile. Mt. Teranga is 2920 ft. high.

Population, 2000. English protectorate declared in 1888.  $21^{\circ} 20' S.$ ,  $160^{\circ} W.$  23.

**Rat**, in Fortescue strait, New Guinea.  $10^{\circ} 36' 35'' S.$ ,  $150^{\circ} 54' E.$

Ratack or Radack, the eastern chain of the Marshall islands.

**Rativa**, islet on the coast of Vanua levu, Fiji.  $16^{\circ} 44' 20'' S.$ ,  $179^{\circ} 40' 30'' E.$  ⊖

**Raur**, southeast islet of Wolea, Caroline islands; inhabited.  $7^{\circ} 21' 30'' N.$ ,  $143^{\circ} 57' 30'' E.$  3.

Ravahere, see Manaka, Paumotu archipelago. Some refer it to Marakau or Dauahaida.

Ravaivai, see Vavitao of the Austral islands.

Raven, see Ngatik of the Caroline islands. 5.

**Ravenga**, islet off Port Patteson, Vanua Lava, New Hebrides.  $13^{\circ} 48' S.$ ,  $167^{\circ} 30' E.$  Here the language of Motlav is spoken.

**Ravu ravu**, off Vanua levu, Fiji;  $1.5 \times 0.7$  m. Inhabited.  $16^{\circ} 27' 24'' S.$ ,  $178^{\circ} 56' 10'' E.$  ⊖

**Razor**, two islets near Sideia, New Guinea; 200 ft. high.

Real, see Panasia, Louisiade archipelago.

**Reao** or Clermont-Tonnere was discovered by Duperrey in 1822. A low, inhabited atoll, 10-11 m. long and very narrow. Paumotu archipelago. Northwest end is in  $18^{\circ} 16' 50'' S.$ ,  $137^{\circ} 09' 06'' W.$  22.

Romanzoff, see Tikei of the Paumotu archipelago. 21.

Romanzoff, see Wotje, Marshall islands.

**Roncador** or Candelaria reef, Solomon islands, was seen by the pilot Maurelle in 1781. Passing it in the night the noise of the breakers suggested the name (Snorer). It is almost certain that it was the same reef seen by Mendaña in 1567 and called by him Baxos de Candelaria. It is 18 m. in circumference and has two openings on the southwest to a good lagoon.  $6^{\circ} 15' S.$ ,  $159^{\circ} 14' E.$  II.

**Rongelab** or Bigini, of the Marshall islands, the Pescadores of ancient charts, was discovered by Wallis, September 3, 1767. A lagoon atoll 16 m. long. Gulick gives the population in 1860 at 120; Witte, in 1878, at 18.  $11^{\circ} 19' N.$ ,  $167^{\circ} 35' E.$  ⊙

**Rongelapelap**, islet of Rongerik, Marshall islands.  $11^{\circ} 14' 30'' N.$ ,  $166^{\circ} 59' E.$

**Rongerik**, Marshall islands. Discovered by Kotzebue; 36 m. long, with a width from 3-20 m. The population in 1860, according to Gulick, was 60; in 1878 Witte gives only 10.  $11^{\circ} 14' N.$ ,  $166^{\circ} 35' E.$  ⊙ 6.

**Ronhua**, islet in Port Uitoe on the southwest side of New Caledonia.

**Ronongo**, island south from Vella Lavella, Solomon islands; from which it is separated by Wilson strait. About 2000 ft. high.  $8^{\circ} S.$ ,  $156^{\circ} 32' E.$

**Rook**, see Umboi, Bismarck archipelago. This name was given by Dampier for Sir George Rook.

**Roporopo**, islet 1 m. southwest from Mugula in Orangerie bay, New Guinea.  $10^{\circ} 31' S.$ ,  $149^{\circ} 47' 37'' E.$

**Roro** or Yule, on the south coast of New Guinea, is  $4 \times 1.5$  m., and 534 ft. high.  $8^{\circ} 48' S.$ ,  $146^{\circ} 32' E.$  A mission station. The name is sometimes written Lolo.

**Rosario**, of the Bonin islands, is 148 ft. high.  $27^{\circ} 18' N.$ ,  $140^{\circ} 50' E.$

**Rose**, a coral islet discovered by Freycinet; named for his wife who accompanied him; 70 sea miles east from Manua, Samoan islands. It is inhabited only by birds. By the treaty of 1899 it belongs to the United States.  $14^{\circ} 31' 30'' S.$ ,  $168^{\circ} 08' 30'' W.$  **15.**

**Rosse**, northeast coast of Auckland islands, New Zealand.

**Rossel**, see Roua of the Louisiade archipelago. Rossel was Lieutenant on the *Recherche*.

**Rota**, Zarpane, Sarpan, or Luta, of the Marianas, is of calcareous rock,  $12 \times 5.5$  m. and 800 ft. high.  $14^{\circ} 08' N.$ ,  $145^{\circ} 10' E.$  See map under Marianas.

**Rotch**, see Oneke.

**Rotcher**, see Tamana of the Gilbert islands.

**Rotterdam**, Tasman's name for Namuka of the Tongan group.

**Rotuma**, Rotuam or Grenville, was discovered by Captain Edwards in 1791; 8 m. E-W., 2 m. N-S.; 800 ft. high. Islets on the south are Solnahou, Solkop; on the east, Afgaha; north, Hanoua; on the west, Ataou, Hofliona, Ouea. Population, 2500; all Christian. While the people are classed as Polynesian, their language belongs, according to Codrington, to the Melanesian group.  $12^{\circ} 28' S.$ ,  $177^{\circ} E.$  **16.**

**Roua**, Rua or Rossel, of the Louisiade archipelago, is  $18.5 \times 6$  m., 2750 ft. high, thickly wooded. Inhabitants, Papuan cannibals; a short, robust race, sooty brown; their language bears no resemblance to any known New Guinea dialect. East point is in  $11^{\circ} 23' S.$ ,  $154^{\circ} 18' E.$  **9.**

Samarang, a name of Palmyra.

Samba, native name of Mendaña's Santa Ysabel, Solomon islands.

**Samoan Islands** lie between the parallels  $13^{\circ} 30' - 14^{\circ} 30' S.$  and the meridians  $168^{\circ} - 173^{\circ} W.$  Krusenstern believed them identical with the Bauman islands seen by Roggewein in 1721. So far as any certain knowledge of them was obtained we are indebted to Bougainville who, in 1768, touched there and called the group *Iles des Navigateurs*. The Wilkes expedition, in 1839, surveyed them with some care. The group (with the exception of Rosa or Rose island) is volcanic, but without active craters; although near Olosenga there was a submarine eruption in 1866. There are 13 islands generally surrounded by coral reefs, and there is but one good harbor in the group, that at Pangopango on Tutuila, for Apia on Upolu has only an open anchorage within the reef. The islands are, beginning at the west end, Savaii, Manono, Apolima, Upolu, Fanuatapu, Namua, Nuutele, Nuulua, belonging to Germany; and Tutuila, Anuu, Ofu, Olosenga, Tau and Rose belonging to the United States. Civil wars have prevailed of late years and England, Germany and the United States undertook to establish peace and a gov-

ernment by a tripartite convention (1889) which was a miserable failure, and at last the group was divided, as shown on Map 15, between Germany and the United States. Proclaimed February 16, 1900. The area of the group is about 2650 sq. m.; and the native population, which is gradually diminishing, is estimated at 30,000. From December to April hurricanes may occur. The most complete account of the geography of the Samoan islands will be found in the *Journal of the Godeffroy Museum, Hamburg, 1873-5*.

**San Alessandro** or Forfano, one of the Volcano islands.  $25^{\circ} 24' N.$ ,  $141^{\circ} 15' E.$

**San Antonio**, islet off the northeast point of Gardenijs, Bismarck archipelago; well wooded; natives friendly.  $3^{\circ} 07' S.$ ,  $152^{\circ} 43' E.$

Sanaroa, one of the names of Raputata or Welle in the D'Entrecasteaux group. 9.

**San Augustino**, an islet of Oraluk, Caroline islands.  $7^{\circ} 37' N.$ ,  $155^{\circ} 09' E.$

**Society Islands**, so named by Cook, in 1769, in honor of the Royal Society, were first discovered by Quirós in 1606. Captain Wallis rediscovered the group June 19, 1767, and knowing nothing of previous observations called it for his patron, George III., King George Islands. At that time Lieutenant Furneaux took formal possession. April 2, 1768, Bougainville arrived at Tahiti in the *Boudeuse*, and after a short experience with the inhabitants called it La Nouvelle Cytrehè. The famous transit of Venus expedition, commanded by Lieutenant Cook, arrived April 12, 1769. After the observations were concluded Cook surveyed Tahiti (Otahéité) and discovered the northwestern group to which he gave the name Society, calling Tahiti and the neighboring islands Georgian, but his first name has been extended to the whole group. In 1772 Bonecheo was sent by the Spanish government to these islands, and on his report he was again sent with the means of colonizing as then understood, in 1774. Cook twice again visited Tahiti. The next European to arrive was Lieutenant Bligh in the *Bounty* in 1788. Vancouver came in 1791. In 1842, on account of hostilities to French missionaries, Du Petit Thouars compelled Queen Pomare to sign a treaty in favor of Frenchmen, and this was followed in 1844 by the forcible seizure of the island by Bruat in the name of Louis Philippe of France. In 1888 the entire group was declared under a French protectorate.

While government accounts are kept in francs and centimes, the merchants all do business with the Chilean dollar. The principal exports are cotton, copra, coconuts, oranges, vanilla, lime juice and edible fungus. All tropical fruits grow

well when introduced. The climate is hot and moist, causing rapid growth of all vegetation, but is healthy for Europeans. The islands are, from the southeast, Maitea, Tahiti, Tetuaroa, Moorea and Tapamanu for the windward group; and Huahine, Raiatea, Tahaa, Bolabola, Tubai, Marua, Mopiha and Bellingshausen for the leeward group. **20.**

**Solomon Islands.** A large group discovered by Mendaña in 1567. This interesting Spaniard, in his anxiety to colonize and make his discoveries of use to his country, strove for many years to induce the authorities to send another expedition; but it was not until 1595, when he was advanced in years, that his wishes bore fruit. He was not destined to again see the islands which had been named *Islas de Salomon* in hopes to attract colonists to this supposed Ophir. Mendaña died at Santa Cruz, and the remains of his expedition sailed on to Manila. The narrative of Gallego, the pilot of the first expedition, had been suppressed, and that of Quirós, who held the same position in the second expedition, met the same fate. Drake had made his name terrible in the Pacific, and the jealousy of the Spaniards led to a studied concealment of their discoveries, and for two centuries the memory of this group was fading and passing into legend. So it was that the Spanish discoveries profited no one; and even when at last the suppressed journals were brought to light they afforded little new information, for the work of discovery had been done again in the meantime. In 1767 Carteret sighted outlying islands of the group (Gower), and also a part of Malaita, but he did not suspect that he had found the Solomon islands, although he had been looking for them. The next year Bougainville made more definite work, but the real discovery took many years, and to the present no sufficient survey has been made. Only the shores of the larger islands have been explored, and the outlines are very inexact on the charts.

For more than thirty years the Melanesian Mission has braved the dangers of climate and savages and made it possible to land on many islands of the group. Dr. Guppy says truly that the only redeeming feature of the intercourse of the white man with these islanders is this grand mission.

The group covers an area 600 m. in length NE-SW. Most of the islands are volcanic, some are calcareous, and some are both. The natives are Papuan, but show traces of Melanesian, Polynesian and Malay. They are of medium height, well-proportioned, but do not have attractive features. The scantiest clothing is worn, but ornaments are much in use, such as bracelets, anklets and nose pins. Cannibals generally, they yet make good servants.

The principal islands are, beginning at the northwest, Bouka, Bougainville,

Shortland, Fauro, Choiseul, Ysabel, St. George, Gower in the German part; and Mono, Vella Lavella, Ronongo, Narovo, New Georgia (Rubiana), Buena Vista, Florida, Guadalcanar, Malaita, Ulava, San Cristóval in the English portion. As the map (12) does not give the line of demarcation between the portions allotted to Great Britain and to Germany, the official bounds may be given here. Southward and eastward of a line joining the undermentioned positions these islands belong to the former, northward and westward to Germany.

Since the above was written the Solomon islands have been repartitioned between England and Germany as a part of the arrangement by which the former withdrew from the Samoan group. The convention was signed at London on the 14th November, 1899, but proclaimed by the High Commissioner for the Western Pacific at Suva, 6th October, 1900. It transfers from Germany to the Protectorate of the British Solomon islands the following:—

Choiseul, and the small islands depending thereon; Ysabel, and the small islands depending thereon, including Ramos and St. George; Shortland, with Morgusaia, Alu, Poporang, Faise, Onua and Ballale; Fauro, with Oema (island and atoll), Ovau, Asie, Illina, Nusave, Niellei, Nusakoa, Benana, Nufahana, Munia, Piedu, Masamasa and Cyprian Bridge; Tasman or Numanu atoll, comprising Numanu, Loto and thirty-seven others; Ontong Java; El Roncador or Candelaria reef; Gower or Inattendue.
